QUESTION: Sustainability Appraisal comment	The Appraisal covers all the elements of the strategy plan. As a lay person I found it a bit over the top to digest and took a long time to understand. I feel that there is an immense body of literature to get though and that maybe a closing period extention may give other people time to review at leisure rater than in haste. It has taken me between 3 to 4 hours aday for the past week just to get this far.

QUESTION: Sustainability Appraisal comment	<p>The level of new housing proposed is expected to put severe strains on water supplies to Dacorum during the 2020s under drought conditions. In these circumstances, there would be no option but to extract additional water from the chalk aquifer which in turn would cause further damage to the Borough's precious chalk streams. New supplies of water are not likely to be possible until after 2030.</p> <p>The growth proposed by the Strategy would require substantial infrastructure improvements in order to transport and treat wastewater and sewage. This might take at least ten years to complete, and be extremely expensive as well as disruptive to affected communities.</p> <p>The inevitable increase in traffic arising from such large scale development will put huge pressure on already full roads. The proposed new road north of Hemel could have adverse unforeseen consequences on villages to the north and west of Hemel.</p>

QUESTION: Sustainability Appraisal comment	<p>Growth at any cost is not the answer. The "vision" mentions sustainability throughout, but none of this growth is sustainable. Overloading areas with a population it cannot support will be detrimental to the countryside, farm land, green space and the lives of those who have chosen to live in the area. Steady and monitored growth means strategic thinking and adapting to changing conditions. Build the infrastructure and only then, grow in line with that. The policy as it stands is to build at a rapid rate, seemingly at any cost.</p> <p>My experiences are of living in Tring, but it is likely the sentiment is echoed all through the Borough. For example, it is already hard to get a doctors/dentist appointment. Increase healthcare capacity, then grow the community.</p> <p>The employment growth you are forecasting is simply a proposal and not a reality. We simply can't know what the economic situation will be – some of your plan may succeed, but others will likely falter. Build the economy, then build the housing.</p> <p>Tring is a commuter town and a (significant) proportion of new inhabitants will likely commute to London on a trainline already at capacity. Station car parks are full before rush hour is over - where is the proposal to increase that capacity? You mention building a better link between Tring and the station, build it first and demonstrate that it works. What is currently in place is dangerous for pedestrians, cyclists and drivers. A small cohort will cycle in any weather, many (including me!) will not and will resort to driving. You also can't change the existing road infrastructure; Tring high street is extremely narrow. A single vehicle stopping (eg deliveries, mail van) backs up traffic. Increasing housing in Tring by such radical numbers will result in far more congestion and pollution – flying directly in the face of your environment plan. It's easy to demonstrate now that people drive to the town and do not walk, and an increase in population will result in increased traffic, particularly as the green belt sites are some distance from the town centre.</p> <p>Residents in this area should not be made to pay for short sighted thinking. The proposal to build vast numbers does one thing; makes developers very rich. They will build the standard "cookie cutter" houses, with minimal space between properties, minimal parking and a minimal green space. Once they have been paid, they will leave and having irreparably changed the face of the town, we, and future generations will be left to suffer the consequences.</p> <p>These new estates seen all over the country are the modern equivalent of tower blocks build in the 60s. We will look back in 50 years and wonder why anyone thought they were a good idea. The example to the west of Tring is a key demonstration of this. Decorating the house that face the main road with a pretty stone façade is just that, a façade. Look within the roads and you see narrow houses, squashed in at the edge of town, forcing people to drive to town. Maximising profits for developers, ignoring the real needs of the town inhabitants.</p>

In the original "vision", I believe the proposed number of houses in Tring was between 600 and 1100, which seemed absurdly high. You have now raised this to 2,731 (an odd number, how can you be so exact? Presumably because this was calculated by a formula rather than rationale thought) but cannot see any justification for that alarming increase. I made the same points then, grow the infrastructure and then grow the housing stock, not the other way around. Targets are not the answer. Destroying green belt and farm land is not the answer. Once you have made these mistakes, we cannot go back.

This may be mandated from Westminster, but your job as our local representatives is to fight back. I am not anti-growth – our population is expanding, but we need to grow in a sustainable, controlled way, not mandating the growth of a town by 40-50%. I spent many hours reading through the 2017 documents and responding. Now to find out that you are “doubling down” on expansion at such a rate is very disheartening. Many people do not have the time to read through such lengthy document and reply but their lack of response should not be taken as de facto approval. We love where we live. Please, take the time to make the right choice and not put this monstrosity of a plan into action.

QUESTION: Sustainability Appraisal comment	<p>As regards the Interim Sustainability Report, the application of the criteria to the Tring sites as recorded in the tables understates the adverse features ie Biodiversity, shows a lack of understanding of how and the extent to which these areas are currently used eg Climate Change/Air Quality, fails to highlight that the soil is Grade 2 quality and will be lost, fails to bring out the value of the natural assets eg Landscape and Historical features of the locations eg Historical Environment. The criteria should be applied again, the results reviewed and the adverse results given their proper weight – then decisions made.</p> <p>This failure to apply the criteria correctly has contributed to a wrong choice of Option. The concentration of development on the 3 Towns has no doubt been strongly influenced by landowners/farmers and developers interests, benefits and preferences BUT it should be a choice made objectively BY THE COUNCIL for the benefits of residents, not that small group of people. The spread of the burden of extra houses should be greater and the sites more plentiful and smaller so as not to damage the environment and existing residents interests. This plan is aimed at future residents with little recognition of present residents. We are all only the present custodians of our environment – so we must take the greatest care of it for those that follow.</p>

QUESTION: Sustainability Appraisal comment	<p>Table 4-1: Key sustainability Issues and Opportunities (Page 16)</p> <ul style="list-style-type: none"> The following is identified as a 'key sustainability issue': <i>'Ashridge SAC/SSSI, Tring Park, Tring Reservoirs and the Grand Union Canal are all reported to be experiencing visitor pressures. As the urban population increases, pressures on access to the countryside and these key attractions will increase.'</i> Yet there is no further mention of these in the Plan and no proposed mitigating action. <p>Section 5.5 'The Council's preferred approach' (Pages 42- 45)</p> <ul style="list-style-type: none"> We disagree strongly with the conclusions reached with respect to Tring on several of the stated considerations. The conclusions reached are not consistent with the reasons given, place insufficient emphasis on mitigating negative aspects and contradict other stated conclusions – as expanded upon in the following sections. Page 43. A stated consideration is <i>'minimising, where possible, adverse impacts on the highway network and seeking to maximise opportunities for supporting sustainable modes of travel'</i>. As noted elsewhere in this response, the options for both road connections and sustainable travel have NOT been adequately explored. In particular for a Tr03/Tr02, north–south road, connectivity has not been considered beyond vague notions that something will be required. This is nowhere near concrete enough. On page 46, <i>'[the Council] considers the allocation of 1,400 homes at East of Tring will enable significant amounts of public open space to be provided, including a new public park of around 20 hectares on land classified as Grade 2. The Council considers that these requirements mitigate the impact that development would have on this particular</i>

objective. Twenty hectares is less than one sixth the area of the existing Tring Park, which elsewhere in the same document (Page 16) is already reported to be suffering from ‘visitor pressures’. The provision of 20 hectares of public park is wholly inadequate, especially coupled with the complete lack of further mitigating action for developing on Green Belt land and the absence of any joined-up plan for linking other green spaces impacted by the proposed developments.

QUESTION: Sustainability Appraisal comment The SA conclusion 7.1 states that the Council have been successful in achieving their SA objectives “by maximising the levels of development in the existing urban areas the amount of greenfield land needed will be minimised, thereby reducing the scale of these effects.” But DBC’s Plan does not reflect this statement. The facts do not support that conclusion. Excluding windfall, only 23% of the planned development to 2050 is on Brownfield sites, leaving 77% to be built on Green Belt or Greenfield sites (64% Green Belt). This is not a ratio that in anyway suggests that the DBC have effectively analysed urban capacity correctly or maximised “the levels of development in the existing urban areas”. It is noted that CPRE Herts have come to the same conclusion that DBC underestimate potential brownfield regeneration opportunities: “The proposed local plan fails to take into account the impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which are likely to result in much greater conversion of commercial space (especially office and retail) to residential use. The potential for such windfall provision of housing throughout the borough is likely to be much higher than that identified in the proposed plan. As a result, such a windfall many of the proposals for development on Green Belt and greenfield sites outside of existing towns and villages are likely to be unnecessary. Dacorum Borough Council should consider promoting mixed use living spaces in town centres. This has the potential to provide much needed affordable housing and provide a sustainable transport solution for local communities. The plan lacks a vision for the longterm future of retail and leisure parks that create better people friendly places and that are not designed around cars. In the light of recent events (Covid and Brexit) and trends in the retail sector, the

government has announced a new approach to promotion of redevelopment and changes to the way our urban land is used, in particular the reconsideration of how much, and which existing retail, industrial and commercial land and premises can be more efficiently and sustainably used in a different way. The now-expanded permitted development rights allow commercial space to be converted to residential (as well as adding additional storeys on top) without need for planning permission. This new opportunity appears to have been ignored in the preparation of the proposed plan. It would seem DBC are failing to plan to maximise “the levels of development in the existing urban areas. The Local Plan must consider as a priority the Post Covid 19 Pandemic and Brexit effects, to see how they impacts of the Growth needs and requirements in the Dacorum area.

QUESTION: Sustainability Appraisal comment	<p>As outlined in my replies to Question 1 and 2 development on the scale proposed is neither sustainable nor necessary. The Sustainability Appraisal report lists the first 2 key objectives as follows:-</p> <p>1. To protect, maintain and enhance biodiversity and geodiversity at all levels.</p> <p>Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000 + more people and their cats and dogs into them, cannot be done without damaging biodiversity. And putting a 10% net gain target on developers that will never be measured or achieved is just greenwash.</p> <p>2. To protect, maintain and enhance water resources (including water quality and quantity)</p> <p>Your own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already over-extracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. That's another 7.5 million litres a day - minimum. There will be no water left to measure quality. You will kill the river and all the wildlife and biodiversity that depends on it - how are your developers going to offset that in their 10% net gain calculations?</p> <p>Development at the level you propose is simply not compatible with these 2 objectives.</p>

QUESTION: Sustainability Appraisal comment **Growth area TR06 – off Brook Street Tring**

TR06 comprises Tring Market Auctions, The Tring Local History Museum, the Fire Station and Forge Car Park.

Tring Market Auctions is located at the rear of the site of TR06 with access from Brook Street and a license to access the Forge Car Park.

The ownership of the site is divided between Tring Town Council (Auction Rooms, Museum and the Market Place *hardstanding area*), Dacorum Borough Council (Forge Car Park) and Herts County Council (The Fire Station). The Freehold ownerships make it a somewhat complicated issue should planning proceed.

In the proposal, no mention has been made for Tring Market Auctions to be included in the future plans of TR06, but mention has been made that if the site is re-developed Tring Market Auctions would be offered an alternative site in the town – where? The Auctions currently comprise about 16000 sq ft of buildings alone together with the adjoining parking areas. No detail has been provided and no mention of re-location provisions has been made. It appears the proposals are an afterthought to the Dacorum local plan. Tring Market Auctions occupy under the terms of a lease with Tring Town Council.

The History and Current use of the Site

In 1893 under the requirements of the Board of Agriculture and with the assistance of Lord Rothschild, the sale room with office was constructed in Brook Street. It was let to W Brown & Co. who conducted the first sale by auction in January 1894, since when auctions and sales have been held continually on the site for over 125 years – surely this qualifies the location to be part of Tring’s heritage.

During recent years from 1960 there has been numerous enquiries and planning applications to develop the site with offices and supermarkets together with residential, all of which have been rejected.

In 1993 the livestock auction ceased to operate leaving the chattel auction business to continue and flourish under the directorship of Stephen Hearn who took Tring Market Auctions to become independent and grow into the fine company it is today.

It now has an extensive complex of four Auction Rooms, forming one of the largest and best known venues of its type in the Home Counties.

The sales attract a very large number of vendors and buyers from Tring and the surrounding towns and villages together with an ever-growing number of people from throughout the Home Counties and Internationally. Many of the buyers represent the trade and other specialist collectors in all categories.

The auctions provide a friendly and entertaining atmosphere on sale days making it an enjoyable venue for both business and pleasure. Regularly around 500 visitors attend on viewing and sale days, many of these attending the auction visit the town shops and local attractions.

Tring Market Auctions is a unique and key component of the town's economic town centre fabric. It provides a key fulcrum for maintaining the town centre economic sustainability. Visitors to the auctions provide business for other local shops and enterprises not just on sale days but across all the sites activities, its town centre location is fundamentally linked to many other local business and the town market continued sustainability.

The auction rooms provide a unique component part of maintaining Tring Town Centres' viability and supporting Tring based economic development. If Tring is expected to grow then business, jobs and economic infrastructure growth needs to be matched, Tring Market Auctions needs to be maintained as it supports this economic ambition of the Local Plan through continued town centre provision of a business that is complementary to local shops and does not provide competition, as would the proposed supermarket.

The Saleroom operates with a permanent staff of some 20 people which includes consultants and additional part time staff during sale days. The venue is a key local employer, bringing training and development and job opportunities for local young people.

The Auction sales deal with all periods of furnishings and collectables, processing over 50,000 lots each year providing an effective and affordable house furnishing option for many local people. It has a growing importance as a recycling centre, particularly when it is estimated over 20 tonnes of furniture timber is recycled every fortnight, which supports the climate ambitions in the Local Plan.

In addition the Auction provides a key income stream to the Town Council reducing precept impact on local residents and contributing to a sustainable model of local government

The Auction provides a service to both the local community and professional organisations throughout the Home Counties and beyond.

Points of Consideration

- It is positioned on a site with a long history of auctions and marketing of stock

- It is an important asset for the Town
- The auction attracts a large number of visitors to Tring throughout the year
- It employs local townspeople
- Town Centres should reflect the distinctive characteristics of a Market Town
- The site would not lend itself as a supermarket, particularly when this proposal is unproven
- The Auction Rooms occupy a strategic position at the head of an open space and wildlife corridor which runs from the Tring Park Mansion vista through to Icknield It is very much part of the local community, supporting many of the Town's organisations and groups

Planning Matters for Consideration

- Brook Street has a notorious reputation for being dangerous in parts where it is very narrow making it often difficult for vehicles to pass
- Tring High Street has introduced traffic calming measures
- It is suggested in the development plan that a supermarket would be served with a new carpark. Bearing in mind the development would include the existing Forge Car Park, does one interpret this as denying the town parking facilities
- Recently, two large planning applications have been refused in Brook Street both in close proximity to TR06, one being the residential re-development of Market Garage and the introduction of a residential development on the North Eastern side of Silk Mill works. In both instances, the reason for refusal included over-development of the respective sites and the dangers of access to Brook Street
- The plan proposals to create new food and drink leisure uses is difficult to understand when there are currently so many retail outlets available in Tring
- It states that any re-development of the site would only be permitted once replacement facilities are provided elsewhere in the town. The only specified new location is in Growth Area TR01 (Dunsley Farm) for the Fire and Rescue There is no detail with regard to the siting of Tring Market Auctions, nor the Local History Museum.
- One can create new buildings but one cannot create history

TR06 is not a redundant site, it forms an important part of Tring Town Centre with Tring Market Auctions and the local Museum providing both business and pleasure to hundreds of people throughout the year.

QUESTION: Sustainability Appraisal comment	<p>METHODOLOGY.</p> <p>It is clear from the volume of documents accompanying the consultation that considerable public money has been expended on and considerable input has been received from external consultants and sources. TRL has analysed each site carefully and objectively. However the assessments in their extensive analysis do not appear to have been translated into coherent policy or proposals. The scope of the work undertaken clearly allows for the consideration of sites on an individual basis and yet the options offered in the plan have been compressed into the rigid format of the Spatial Strategy at 5.2 which fails to deliver a logical and consistent result.</p> <p>The formulation of options described in the SA appendices is suspect and inconsistent. Why does DBC's preferred option (C 1) result in 1450 more houses in Tring and Berkhamsted and 1900 fewer in Hemel Hempstead, the most sustainable location, compared to option A which supposedly concentrates development in the 3 largest settlements? Why does option D (which proposes 2 new developments) result in 200 more houses in Tring and Berkhamsted but no extra homes in Kings Langley or Hemel Hempstead when compared to option C ii? Allocations have not been made on a consistent, proportionate basis.</p>

QUESTION: Sustainability Appraisal comment

I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment	The proposed development will put pressure on the water supply. The water supply in the Chilterns is fragile and any additional need to pump water from the chalk aquifer will have a deleterious effect on the Rivers Gade and Bulbourne. The inevitable increase in traffic arising from such large scale development will put huge pressure on already full roads. The proposed new road north of Hemel could have adverse unforeseen consequences on villages to the north and west of Hemel.

QUESTION: Sustainability Appraisal comment	<p>Sustainability Appraisal. I don't think that the size of development in Berkhamsted is sustainable in any way due to the disproportionate size and damage to the environment that it will cause. We will lose green land that will be lost forever, increase pollution and put a strain on already stretched facilities which will be dealt with inadequately and effectively issues will have a sticking plaster stuck on them. The town is already densely populated by virtue of the fact we have hundreds of cottages tightly packed together. When they were built people didn't have cars so the streets were wide enough. That has changed and now everyone has cars which has left us with heavily congested roads. Various developments have been added to the town over the years and that has made the situation worse. The new proposed houses on the A41 side of the town will be too far for people to walk to the station and town centre and too hilly to cycle and so they will drive, more cars on the road, more pollution and congestion. On top of that more children all being driven to the various schools around the town with the increase in population this number of housing will bring. Sewage systems do not have the capacity for more sewage and we already have issues down one end of the town where it is backing up. The town has little green space left it's all been used to build on and now you propose to build on what little is left further out of the town. The parks we do have are tiny and mainly geared for toddlers. The bridle paths and woods, the bigger children cycle through and scouts hike through are what you are going to build on. No thought is given to this and a handkerchief sized park in the middle of a development is no compensation for the lost land and biodiversity. The standard trick is for parks to be promised within a development they are tiny and no replacement for the benefits for a child of being able to rove around a wood with a stick in its hand . They also generally encourage anti social behaviour as do multi story car parks and something else we now have in the town since the arrival of our car park.</p>

**QUESTION: Sustainability
Appraisal comment**

As stated in the Sustainability Appraisal: *“any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects ... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”*

Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure

There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.

Biodiversity (SA Objective 1)

Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.

Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.

Flood Risk (SA Objective 3)

SA states it has found ‘no predicted effects’ against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021).

Greenhouse gas emissions (SA Objective 4)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats.

Landscape & Townscape (SA Objective 9)

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment The SA conclusion 7.1 states that the Council have been successful in achieving their SA objectives "*by maximising the levels of development in the existing urban areas the amount of greenfield land needed will be minimised, thereby reducing the scale of these effects.*"

But DBC's Plan does nothing of the sort. The facts simply do not support that conclusion. Look at the numbers – excluding windfall, only 23% of the planned development to 2050 is on Brownfield sites, leaving 77% to be built on Green Belt or Greenfield sites (64% Green Belt). This is not a ratio that in anyway suggests that the DBC have effectively analysed urban capacity correctly or maximised “*the levels of development in the existing urban areas*”.

BRAG notes that CPRE Herts have come to the same conclusion that DBC underestimate potential brownfield regeneration opportunities:

“The proposed local plan fails to take into account the impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which are likely to result in much greater conversion of commercial space (especially office and retail) to residential use. The potential for such windfall provision of housing throughout the borough is likely to be much higher than that identified in the proposed plan. As a result, such a windfall many of the proposals for development on Green Belt and greenfield sites outside of existing towns and villages are likely to be unnecessary.

Dacorum Borough Council should consider promoting mixed use living spaces in town centres. This has the potential to provide much needed affordable housing and provide a sustainable transport solution for local communities. The plan lacks a vision for the long-term future of retail and leisure parks that create better people friendly places and that are not designed around cars. A good example of mixed-use living spaces in town centres is the recent re-development of a retail park in Watford.

In the light of recent events (Covid and Brexit) and trends in the retail sector, the government has announced a new approach to promotion of redevelopment and changes to the way our urban land is used, in particular the reconsideration of how much, and which existing retail, industrial and commercial land and premises can be more efficiently and sustainably used in a different way. The now-expanded permitted development rights allow commercial space to be converted to residential (as well as adding additional storeys on top) without need for planning permission.

This new opportunity appears to have been ignored in the preparation of the proposed plan.”

In response to section 7 (Housing Strategy), BRAG touched on the potential increase in urban development opportunities with changing work practices post-Covid, but we can also look to the past to see how DBC are failing to plan to maximise “*the levels of development in the existing urban areas*”.

Again, this was covered in BRAG's response to section 7 (Housing Strategy) but it bears repeating here to highlight exactly how absurd conclusion 7.1 of the SA report is.

In section 7, paragraphs 7.6, 7.9 and Table 2 are confusing when comes to windfalls. Both 7.6 and 7.9 state that 200 homes pa have been used but Table 2 only shows 2,408 in total which equates to 133.8dpa.

Paragraph 7.9 states *“Our analysis indicates that windfall sites will play an important part in the housing programme (at 200 homes pa). They are made up of a wide range of small to large sites from a variety of sources that have been calculated using historic delivery rates and expected future trends. We believe it is justified based on past local evidence and is a reliable source of supply across the Plan period.”*

But DBC’s Urban Capacity Study shows windfalls have come on-line at the rate of 306.2dpa (4,287 total) over the last 14 years. In projecting forward for the totals in Table 2, DBC have effectively reduced their windfall expectation by a massive 56% from what has been achieved in the last 14 years.

DBC clearly have a different view of *“expected future trends”* than most other observers, including Government, who expect increased windfall urban development as working practices change post Covid and change of use applications increase.

This is not BRAG being pedantic or over-zealous in pointing out the discrepancy between Table 2 and paragraphs 7.6 and 7.9, these numbers are of critical importance when it comes to offering our precious Green Belt the protection that the NPPF demands.

Even if taking the windfall rate of 200dpa mentioned in paragraphs 7.6 and 7.9, urban capacity over the life of the Plan would increase to 12,146, which equates to a near 100% uplift over the 341dpa requirement suggested by the 2018-based ONS housing need projections for Dacorum.

Figures from the past 14 years and the knowledge of changes in working practices will almost certainly lead to windfall completions in excess of 50% higher than the 200dpa quoted in paragraphs 7.6/7.9 and more than 129% higher windfalls than quoted in Table 2.

The table below illustrates the importance of this point and how it affects the amount of Green Belt release required to meet the ‘non-target’ of 922dpa, and also illustrates just how DBC have not at all produce a plan that even attempts to maximise development in existing urban areas.

And the table does not account for increased change of use windfalls that is accepted by Government as likely to be a trend going forward. Nor does it reflect the now-expanded permitted development rights highlighted by CPRE Herts, but the final column (Last 5yr Ave) suggests the windfall trend for Dacorum is already increasing.

Conclusion 7.1 goes on to say *“In addition, allocating sites in the most sustainable edge of settlement locations will also help to reduce adverse effects, particularly those relating to transport.”*

Again, this is a statement based on aspirations rather than a conclusion derived from facts. At least in terms of the growth areas being promoted around Berkhamsted. Yes, they are edge of town, but situated on steep valley sides (some gradients in excess of those found on the Tour de France) and ridge top locations at some distance from the town centre,

facilities and the railway station. They will certainly not “*help reduce adverse effects, particularly those relating to transport issues*”.

With respect to Berkhamsted, these locations can only do the opposite and add to the adverse effect, particularly those relating to transport issues.

The SA report seems to give a large weighting to the transport connectivity of Berkhamsted. While Berkhamsted is served by a very good rail service, that service was at capacity (pre-pandemic) and BRAG takes issue with bus services being portrayed as good.

The “*high frequency bus service (No.500)*” referred to in C31 only operates 3 buses per hour Monday-Friday, 2 buses per hour on Saturdays and a single hourly service during Sunday shopping hours. There is no evening service or early services on Saturdays, while it also suffers reliability issues due to its length.

Berkhamsted does not have a sustainable transport system in place and promoting growth on valley side and ridge-top Green Belt locations will only reduce those sustainability credentials further.

The SA report Appendix C does identify the chronic issues revolving around water and wastewater, but as BRAG has highlighted elsewhere there is nothing in the plan to address these issues. DBC’s usual answer is that “*developers have a right to connect and development cannot normally be resisted on the grounds of inadequate water supply or sewerage capacity.*”

BRAG would query whether the Borough is correct in this respect. Things may have moved on but BRAG does know that in the 70's there was a moratorium on house building in South Devon until improved sewage disposal facilities were built, and in Herefordshire due to pollution there is a moratorium on all house building in the River Lugg's catchment area.

Overall, the SA report suffers from the usual confirmation bias traits that accompany analysis that requires specific outcomes to be justified.

DBC’s plan is clearly set out on the premise that we have a large housing target to hit, how do we do we achieve that target it?

Good planning plans for the right houses in the right places.

So, the questions should be, what does our Borough need and how best can we provide for that need?

The SA report would look completely different given the latter questions.

QUESTION: Sustainability Appraisal comment Increased Flood Risk
Berhamsted is situated in a valley and during heavy rain and storms the drainage infrastructure often cannot cope. I have seen the road outside my house on many occasions turn into a small river, the tarmac has been lifted and even main drains burst. Anything that reduces the ability of the land to drain and hold water at the top of the hills should be rejected. These sites are situated at valley tops and would lead to more water runoff effecting those lower down the hills.
Air Quality
The plan needs to provide a comprehensive analysis to ensure we have a plan which ensures the reduction of air pollution. Sites should discourage car use, encourage walking and any development should have net zero emissions.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, in so far as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites, the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment **General**

The purpose of the Sustainability Appraisal Report is "to provide an assessment of the environmental, social and economic effects that would be likely to result from the implementation of strategies, policies and sites included in the Dacorum Draft Local Plan." (1.2)

What has been presented is a relative assessment of the sustainability of the available sites. We would argue that availability is not a function of sustainability and that the Sustainability Analysis should take as its benchmark the optimum location of sites based on the proposed criteria. Whilst this may not affect the relative ranking of the available sites, we believe that it would demonstrate the unsustainability of the proposed locations.

We have significant reservations regarding the sustainability analysis. For example, the Interim Sustainability Appraisal Report Non-Technical Summary states under the heading “sustainable locations” that:

“Given the level of growth required by the plan, it is proposed that some development must take place on the edge of existing settlements which would be at a distance from facilities and services.” (4.4.11)

Rather than “some”, surely this should read “most”?

The same section goes on to say that:

“it is unclear what infrastructure would be delivered to mitigate against negative effects in the absence of the Infrastructure Plan.” (4.4.11)

If it is acknowledged that locating developments some distance from existing infrastructure, and with insufficient knowledge of the mitigating infrastructure to justify calling a location “sustainable”, how is it that the “summary of assessment of spatial strategy and growth options” shows that Options, A, B and Ci (the development of the 3 main towns, just Hemel Hempstead, or development spread across the six main settlements respectively) can be described as “very sustainable” (3.3 and table 2)? This is a misrepresentation of the report’s conclusion and should be either “have a negative effect which is not significant” or more likely, “have a significant negative impact”.

Likewise when all three major development sites (east Tring, south Berkhamsted and north Hemel Hempstead) are only described as “likely to have a positive effect which is not significant” (and we would argue that this is already an overly positive assessment, certainly for north Hemel Hempstead), how does this result in Option A being assessed as “very sustainable” for sustainable locations?

Water supply

With regard to water supply, the Interim Sustainability Appraisal Report Non-Technical Summary notes that

“... the underlying chalk aquifer is assessed as being “over-abstracted”. Therefore, providing for a minimum of 16,596 new dwellings in the Local Plan period would increase this pressure and [the] risk of periodic water shortages increases.” (4.4.2)

Whilst the Interim Sustainability Appraisal Report Non-Technical Summary goes on to say that the Plan includes policies to mitigate against adverse effects on water quality and over-abstraction we can only see one (DM33) which appears to deal with this issue.

In addition whilst the Interim Sustainability Appraisal Report identifies water as a potential incompatibility between the Sustainability Assessment objectives and delivering homes for everyone (s 4.6, figure 4.1), all of the site assessments only assess water as having an uncertain impact (5.4.3 and table 5.4). This inconsistency needs to be resolved.

The NPPF (s.170) expects planning policies to conserve and enhance the natural environment; we do not believe as stated that this objective is delivered by the Plan.

Conclusion

We are unable to follow the process by which the Sustainability Appraisal report has been constructed. It appears to be at best inconsistent, at worse designed to support a pre-determined narrative.

QUESTION: Sustainability Appraisal comment The purpose of the Sustainability Appraisal Report is “to provide an assessment of the environmental, social and economic effects that would be likely to result from the implementation of strategies, policies and sites included in the Dacorum Draft Local Plan” (1.2).

What has been presented is a relative assessment of the sustainability of the available sites. We would argue that availability is not a function of sustainability and that the Sustainability Analysis should take as its benchmark the optimum location of sites based on the proposed criteria. Whilst this may not affect the relative ranking of the available sites, we believe that it would demonstrate the unsustainability of the proposed locations.

We have significant reservations regarding the sustainability analysis. For example, the Interim Sustainability Appraisal Report Non-Technical Summary states under the heading “sustainable locations” that:

“Given the level of growth required by the plan, it is proposed that some development must take place on the edge of existing settlements which would be at a distance from facilities and services.” (4.4.11)

Rather than “some”, surely this should read “most”?

The same section goes on to say that:

“it is unclear what infrastructure would be delivered to mitigate against negative effects in the absence of the Infrastructure Plan” (4.4.11)

If it is acknowledged that locating developments some distance from existing infrastructure, and with insufficient knowledge of the mitigating infrastructure to justify calling a location “sustainable”, how is it that the “summary of assessment of spatial strategy and growth options” shows that Options, A, B and Ci (the development of the 3 main towns, just Hemel, or development spread across the six main settlements respectively) can be described as “very sustainable” (3.3 and table 2)? This is a misrepresentation of the report’s conclusion and should be either “have a negative effect which is not significant” or more likely, “have a significant negative impact”.

Likewise when all three major development sites (east Tring, south Berkhamsted and north Hemel) are only described as “likely to have a positive effect which is not significant” (and we would argue that this is already an overly positive assessment, certainly for north Hemel), how does this result in Option A being assessed as “very sustainable” for sustainable locations?

Water supply

With regard to water supply, the Interim Sustainability Appraisal Report Non-Technical Summary notes that “... the underlying chalk aquifer is assessed as being “over-abstracted”. Therefore providing for a minimum of 16,596 new dwellings in the Local Plan period would increase this pressure and [the] risk of periodic water shortages increases” (4.4.2).

Whilst the Interim Sustainability Appraisal Report Non-Technical Summary goes on to say that the Plan includes policies to mitigate against adverse effects on water quality and over-abstraction we can only see one (DM33) which appears to deal with this issue.

In addition whilst the Interim Sustainability Appraisal Report identifies water as a potential incompatibility between the Sustainability Assessment objectives and delivering homes for everyone (s 4.6, figure 4.1), all of the site assessments only assess water as having an uncertain impact (5.4.3 and table 5.4). This inconsistency needs to be resolved.

The NPPF (s.170) expects planning policies to conserve and enhance the natural environment; we do not believe as stated that this objective is delivered by the Plan.

Conclusion

We are unable to follow the process by which the Sustainability Appraisal report has been constructed. It appears to be at best inconsistent, at worse designed to support a pre-determined narrative.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would</p> <p>clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Increased Flood Risk

Appraisal comment

Again because Berhamsted is situated in a valley during heavy rain and storms the drainage infrastructure often cannot cope. I have seen the road outside my house on many occasions turn into a small river, the tarmac has been lifted and even main drains burst. Anything that reduces the ability of the land to drain and hold water at the top of the hills should be rejected. These sites are situated at valley tops and would lead to more water runoff effecting those lower down the hills.

Air Quality
The plan needs to provide a comprehensive analysis to ensure we have a plan which ensures the reduction of air pollution. Sites should discourage car use, encourage walking and any development should have net zero emissions.

QUESTION: Sustainability Appraisal comment	<p>The Sustainability Appraisal to support the Local Plan tests a number of key alternatives to the spatial strategy, notably:</p> <ul style="list-style-type: none"> • Option A - Focus growth on the 3 main towns (Hemel Hempstead, Berkhamsted, and Tring); • Option B - Focus growth on Hemel Hempstead; • Option C (i & ii) - Spread growth across the six main settlements; <ul style="list-style-type: none"> • Option Ci: Spread across the six main settlements (low growth at villages); • Option Cii: Spread across the six main settlements (high growth at Bovingdon and Kings Langley); • Option D (i & ii) - New settlement alongside growth at the 3 main towns; <ul style="list-style-type: none"> • Option Di: New settlement in the north-west of Borough • Option Dii: New settlement at Bovingdon airfield; and • Option E - Higher growth option. This option would require the delivery of 1,100 dwellings per annum (dpa) as opposed to Options A—D which are based on 922 dpa, this being Dacorum’s emerging objectively assessed housing need (OAN). <p>As a consistent theme across our response, the approach to the Sustainability Appraisal does not appropriately test the impacts of focusing growth on the 3 main towns of Hemel Hempstead, Berkhamsted and Tring where it is acknowledged that recreational pressure on the Ashridge Commons and Woods SSSI is at its highest. This is reflected in all options presented above in the Sustainability Appraisal given an equal scoring in respect of their impacts of biodiversity.</p> <p>Across Option Ci and Cii there is no consideration of a moderate level of growth in Kings Langley (only low levels of growth or high levels). Considered in the context of a moderate level of growth (greater than that included in the Draft Local Plan but proportionate to the character of the area) there would be an opportunity to mitigate issues that would arise through growth being significantly prioritised in Tring and Berkhamsted (notably impact on Ashridge Commons and Woods SSSI). It is appropriate for Tring and Berkhamsted to accommodate additional levels of growth compared to Kings Langley, however, what is presented in the Draft Local Plan is disproportionate and not justified by the evidence or the role that Kings Langley plays in being a highly sustainable location in close proximity to Hemel Hempstead.</p>

In testing reasonable alternatives associated with the Sustainability Appraisal an option Ciii should be considered that considers moderate growth in Kings Langley.

QUESTION: Sustainability Appraisal comment AS a Berkhamsted resident, I am concerned about the proposal to build on greenfield sites. I have enjoyed walking on the Bridle Way Greenbelt during lockdown which is within walking distance of my house and has been very important for my mental and physical well being. Expansion of housing does not seem to include new medical surgery provisions and will only contribute to the already congested traffic on the high street as people will need to drive into the town centre.

QUESTION: Sustainability Appraisal comment	<p>The departure of the Plan from previous policies and judgements when it comes to the assessments of individual Sites is stark and unexplained. A large and flagrant example of this is North Hemel, where in the Sustainability Appraisal Report Appendix E.1 the Plan's assessment tick-list under "Landscape/Townscape", while admitting that . . .</p> <p><i>" The northern boundary of the site is adjacent to the Chilterns AONB and development could affect the setting of the AONB. The site is within the High Gade Valley and Gaddesdon (sic) Row character areas. Development of the site would extend Hemel Hempstead into this prominent area of countryside and close the gap with Piccotts End"</i></p> <p>. . . gives it an amber cross meaning <i>"The option is likely to have a negative effect which is not significant"</i>.</p> <p>Elsewhere we have :<i>"All major development will be required to deliver an overall net gain in biodiversity of 10%, determined by applying the Natural England Biodiversity Metric 2.0 Calculator"</i>.</p> <p>Achievement of this laudable aspiration would require as a baseline a comprehensive biodiversity register in order to quantify the value of all our existing natural habitats before one could begin to assess how they would be affected by development.</p> <p>The Draft Plan does little if anything, by way of policies, to deal with the current poor state of our rivers and the current problems related to water use, let alone deal with the even greater crisis which would exist as more development takes place.</p> <p>Moving on to the <u>"Interim Sustainability Appraisal Report"</u>, there is much here which one assumes provides the evidence on which the policies in the main document are based/devised. The Water section starts on page 45.</p> <ul style="list-style-type: none"> •provides the key policy context including the current Key Directives, Regulations and Plans in relation to water and water One of the key aims is <i>"to prevent deterioration and where possible improve the quality of rivers and other water bodies"....to "good ecological and chemical status"....and for "groundwater to reach good status" by 2027 at the latest.</i> •outlines in detail the concerns about water quality and in more detail, the quantity of water for consumption. It refers to the underlying chalk aquifer as being <u>"over-abstracted"</u> and the groundwater resources being <u>"at or approaching full utilisation"</u>. It also estimates that <u>climate change</u> will result in a further 5% loss of available water by

Despite these statements, DEF can see no clear policies in the main Plan Document which address these points either in the detail or the urgency which is clearly needed.

Further into the Sustainability Report, Water is considered in relation to the assessments of each of the main development options A to E. (C.17 to C.18). The section on the generic effects for all of the options states, “*Any new housing development will put pressure on water resources. The higher the level of housing the greater the potential adverse effects will be*”. It also refers to the increasing potential for water pollution and sewer floods. At the highest level of development periodic water shortages are likely. The evaluation of the development options appears to be unable to give a value to the negative impacts (i.e. Unknown). The section on mitigation of the negative impacts, offers some ideas on actions to be taken , but these are not evaluated, and says merely that they will “*help to mitigate the potential adverse effects on water quality and the availability of water resources that may arise from new development*”. This statement clearly recognises that not all detrimental effects will be avoided and one can only assume that the present poor state of our rivers will get worse.

By way of summary, the Draft Plan does little if anything, by way of policies, to deal with the current poor state of our rivers and the current problems related to water use, let alone deal with the even greater crisis which would exist as more development takes place.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would</p> <p>clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment	Flooding No detailed assessment has been made of the increased chance of flooding in the Berkhamsted Valley with continued development. Removal of green spaces and agricultural land will decrease the infiltration rate and increase surface run

off of rain water. This can already been seen in the town during heavy rain. New Road becomes a river during downpours and the water heavy in sediment and pollution from the road surface, runs downhill towards the canal and the Bulbourne stream. The drains do not cope very well, even now.

QUESTION: Sustainability Appraisal comment	<p>Water supply in this area is constrained being supplied by the local aquifer which also feeds our Chalk Streams. The Environment Agency says that abstraction is to be restricted to 'current' levels. This poses a challenge to the Infrastructure Plan and is a critical aspect of the proposal to increase dwelling numbers by over 20% in this locality. New supplies of water for this area are not likely to be possible until after 2030.</p> <p>The growth proposed by the Strategy would require substantial infrastructure improvements in order to transport and treat wastewater and sewage. This could take 10 years plus.</p>

QUESTION: Sustainability Appraisal comment	<p>I am opposed to the development of proposed site Tr01</p> <p>Whilst supporting the efforts of Dacorum to play its part in solving the national housing shortage, particularly for local young people who cannot afford houses, we strongly oppose the Dacorum local plan 2020 to 2038 as currently proposed.</p> <p>The number of new homes needed:</p> <p>... is based on outdated figures: the plan is based on Office of National Statistics data from 2014, the more recent predictions of 2018 more than halve the number of new homes needed in Dacorum, and even that data is from before Brexit and Covid so out of date.</p> <p>... the housing target for Hertfordshire is higher than the comparable counties of Surrey and Sussex (www.lichfield.uk).</p> <p>... there must be a binding commitment for affordable homes in the plan. Too often developers have been allowed to wriggle out of this commitment. Tring is not suitable for this kind of increase in population:</p> <p>... there is no capacity for more footfall at the station, the car park gets full and the trains to London overcrowded (based on pre-covid numbers).</p> <p>... the High Street is unsuitable, as the main throughfare from east to west Tring the High Street is narrow and overcrowded for both traffic and pedestrians at peak times. The structure of the High Street has subsided with the current levels of traffic, this will only get worse.</p> <p>... under the current proposals Tring bears the brunt of new housing with more homes than other towns in Dacorum (percentage terms).</p> <p>... there are currently electric vehicle charge points in Forge car park and at Tesco, this is clearly insufficient for a town the size of Tring. Environment</p> <p>... the plan should allocate land for new allotments for the residents so they can grow their own fruit and vegetables.</p> <p>... the plan must commit to increase habitat for wildlife, including wildlife corridors and re-wilded areas to increase bio-diversity.</p> <p>... there should be recreational corridors built into the plan to promote cycling and walking in a safe environment, they should be wide with natural vegetation and not narrow alleyways.</p> <p>Sustainability</p>

... Building Standards, the plan uses the right words to describe sustainability standards, but offers no commitment to these. All new buildings should be designed to meet the most stringent standards and must be at least net zero carbon. Every home should include a parking space with electric charging, should not be reliant on fossil fuels for heating and should include solar PVs. There is no commitment to this in the Local Plan.

... Public Transport, the plan makes no promise to improve public transport to connect these homes, so people do not have to rely on cars on a road structure that in many cases cannot be widened.

Summary

... Dacorum has declared a climate emergency, this plan should give the opportunity to put that into practice and create an inspirational environment where we can live and work together with nature. Instead the Local Plan is unimaginative and will become a developers dream of suburban sprawl, not something we will be proud of. If there is one thing that has become apparent in recent years, it is that we can't carry on as before and that we need to find a better way forward.

QUESTION: Sustainability Appraisal comment	There is no mention of the Bulbourne Cross development in this proposed plan – tthis needs to be taken into account.

The Strategy fails to take into account the combined impacts of the coronavirus pandemic. Greater emphasis should be given to regeneration of previously developed land in order to reduce the amount of housing and employment development on Green Belt and other greenfield sites outside of existing towns and villages.

Berkhamsted has a congestion problem and does not have a sustainable transport system as DBC suggests. Building on steep valley sides and along ridge tops at a distance from facilities will exacerbate problems.

QUESTION: Sustainability Appraisal comment Water: proposed new housing would put direct pressure on Dacorum's water resources, which are already identified as 'over-abstracted'. Until significant new infrastructure could be provided, the only option e.g. in periods of drought would be to extract more water from the chalk aquifer, thus further damaging our precious chalk streams e.g. the Rivers Gade and Bulbourne.

Traffic: There are potential issues with the increased traffic volumes on the B440 and in surrounding villages, where the roads are unsuitable for such increases – as explained in an earlier response.

QUESTION: Sustainability Appraisal comment	<p>My family and I moved to Dacorum in 2018 to settle in Berkhamsted for at least the next 25 years. Over this time, we look forward to developing ever stronger links throughout the community and watching our young children grow to adulthood. As such, we have a vested interest in seeing the Borough grow in a way that works for all its citizens – both existing and new.</p> <p>Against this backdrop, I wish to formally state my strong objections to the ‘Dacorum Local Plan (2020-2038) Emerging Strategy for Growth’. The evidence suggests that, if this plan is approved, your personal legacy will be of considerably worsening towns and communities within the Borough. For new residents moving to the area and for those already here. For all ages. And for all financial situations. I suspect you don’t want to be remembered after you leave this office as the person who caused such damage to an area. So, I ask you to fundamentally rethink.</p> <p>Due to the COVID-19 constraints on travel and mingling for the past year, my experience, and hence prime objection, focuses on the portions of the Local Plan relating to developments in the Berkhamsted area.</p> <p>To summarise:</p> <ol style="list-style-type: none"> 1. Flawed modelling of number and type of housing required would fail to meet the actual needs of the voters moving into the area, whilst disrupting those already here far more than is needed. 2. Inadequate commitment to transport infrastructure needs to accommodate the changes proposed would result in a legacy of decades of traffic congestion for voters in Dacorum and visitors to the area. 3. Insufficient provision of water supply, wastewater disposal and other infrastructure would leave households with shortages and damage the local water table, with knock-on considerations around subsidence and environmental impact. 4. Unworkable assumptions around public transport and foot / bike journeys would see considerable increase to carbon emissions in the Borough and considerable travel delays around vital transport hotspots (town centres, schools, rail stations, etc.). 5. The above worsening of conditions for the new and existing voters in the area also comes with an ecological cost due to the loss of green belt. If green belt is to be repurposed, it must be done in a way that makes the greatest positive impact for the current and future residents of Berkhamsted. This plan wastes that sacrifice. <p>These are fundamental flaws in the strategy underpinning the ‘Dacorum Local Plan (2020-2038) Emerging Strategy for Growth’. As such, this plan should be rejected outright, and a new plan drawn up that addresses the actual needs of the area for today and the long-term success of the Borough.</p> <p>These points are expanded below.</p>

Incorrect Assumptions for Housing Provision

Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, the scale of proposed development in Dacorum is out of balance with the long-term needs.

The Local Plan does not take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6, which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and Area of Outstanding Natural Beauty (AONB).

Recent Government guidance on calculating housing need has been, at best, confusing. The algorithm for calculating housing need that has been used by the Council is a flawed means to calculate the housing needs of the Borough, based on old data.

The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. Instead, the Local Plan is based on calculations using outdated 2014 based ONS data, which results in a significant overestimate of housing needs.

I note that on 16 December 2020 the UK Government published its response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%. The Government also said:

"More broadly, we heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We (Government) should be clear that meeting housing need is never a reason to cause unacceptable harm to such places. ...

Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

Failure to Provide Adequate Supportive Infrastructure

Looking at the proposed developments on Green Belt land, there is insufficient consideration in the Local Plan for the provision of new infrastructure or upgrading the current infrastructure to support the scale of the proposed developments.

Taking a specific example of transportation, consider area 'Bk01 - South of Berkhamsted'. This proposes adding 850 residential units with 2 ways out of the development:

1. Emerging immediately next to a secondary school of over 1300 pupils; and
2. Passing two primary schools on a single, narrow residential road with a 10% gradient and car parking on both sides.

These roads are heavily congested during normal times with the current population – the road by the secondary school backing up during school run times to the main A41 route into and out of the town. Adding 850 households of cars will lead to transport paralysis for the new residents, the homes already in the area, pupils of the schools and people trying to access Berkhamsted from the A41 during peak times.

Similarly, increasing the number of dwelling by over 1,800 in the Berkhamsted area will result in a considerable increase in vehicular traffic through the centre of the town – a route that is already heavily congested at peak times at the A4251 / A416 junction and along the High Street. This is due to the historic layout of the town along a valley with steep sides meaning there are only these two roads into and through the town.

For the increase in population proposed in the Local Plan, there would need to be a considerable extra investment in road widening, traffic flow control measures and new roads to bypass the congestion points inherent with a medieval market town situated in a steep river valley.

Impact on Green Belt and Other Designated Land

The Local Plan states that a key objective is “minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB”. This strategic principle is then violated by the declared mission to provide at least 100% of the Council’s self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity.

Noting that 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns AONB, this approach comes at considerable environmental cost.

As such, the Local Plan must be fundamentally reworked to avoid such contradictions in strategic goals and principles.

You are now faced with a personal choice.

Whether to be remembered for taking the easy choice and sticking to an inherently flawed plan that will deeply damage the Borough of Dacorum forever – your lasting legacy – or to take the brave decision and do what is right – to reject the current plan and come back with one based on the actual needs of the current and future voters and households of Dacorum.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would</p> <p>clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

Yes / No Yes

* Yes

* No

QUESTION: Sustainability Appraisal comment As stated in the Sustainability Appraisal: *“any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects ... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”*

Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure

There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.

Biodiversity (SA Objective 1)

Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.

Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.

Flood Risk (SA Objective 3)

SA states it has found 'no predicted effects' against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly.

Greenhouse gas emissions (SA Objective 4)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats.

Landscape & Townscape (SA Objective 9)

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing

tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment

I am concerned at the lack of detailed environmental surveys of the Green Field Sites proposed in the various options as this means this report is based upon insufficient data. However, the report makes the unsustainability of the Dacorum plan clear, regardless of the sites / options chosen.

There are numerous statements in this study that clearly show all the Dacorum Plan options are at odds with national strategy on sustainability. This is simply because they include growth on Green Belt Land. We should clearly scale back growth to Brownfield Sites only in this area (to provide for local families and offspring), encouraging development in other areas of the country where more brown field sites are available to provide for other housing requirements (such as London outflow).

Here is one quote as illustration:

"Under all the options any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects including amongst others those relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants."

We simply should not be contemplating this.

Yes / No * Yes * No	Yes
QUESTION: Sustainability Appraisal comment	<p>This plan is not sustainable.</p> <p>Only 23% of the planned development to 2050 is on brownfield sites, meaning that 77% (more in Berkhamsted) will be built on green belt or greenfield sites (64% green belt). This does not suggest that Dacorum BC have analysed urban capacity correctly or made best use of brownfield regeneration opportunities.</p> <p>In addition, recent social changes including working from home during the pandemic, means that there will be more opportunities to convert commercial space (especially office and retail) to residential use than is recognised here. This means that many of the proposals for development on green belt and greenfield sites are likely to be unnecessary. It is widely acknowledged that the changes in working due to Covid, will mean plenty of retail/commercial sites become available that will affect this plan. These major changes have not been taken into consideration.</p> <p>Berkhamsted does not have a sustainable transport system - primarily poor bus provision; poor road capacity and unsuitability for cycling - and promoting growth on valley side and hill top locations in the green belt will only reduce those sustainability credentials further.</p>

QUESTION: Sustainability Appraisal comment	We agree with the robust process and criteria followed and note that the report supports the fact that for site BK03 no significant effects were identified. We note that the SA has found that overall, the Draft Local Plan performs well in relation to the SA objectives and agrees that by allocating sites in the most sustainable edge of settlement locations will also help to reduce any adverse effects.

QUESTION: Sustainability Appraisal comment	<p>Table 4-1 of the Sustainability Report lists a number of climatic factors that will be exacerbated by these developments and there does not appear to be any way to sufficiently mitigate for these given the number of homes that are proposed, chiefly:</p> <p>Water Table - Dacorum is fed by a chalk aquifer, with no other local water supply, and is already under pressure from the local demand. The table states climate change and population growth will affect water resources (supply and demand),</p>

increase the risk of flooding and drought conditions. There is no clear plan as to how the increased demand will be met without damage to the borough's three chalk rivers which are classified as priority habitats under section 41 of the Natural Environment and Rural Communities Act 2006. Unless Affinity Water plans to build a waterpipe out-of-area (and there is no obvious source), there is a high probability that the water situation is unresolvable, which may not become fully apparent until years after the builds are complete, as they reach full capacity.

Net zero by 2050 - the National Planning Policy Framework and the 2004 Planning and Compulsory Purchase Act requires a plan for local carbon reductions and an evidence-base for this is required to meet the national climate obligations of net zero by 2050. This plan does not do that and fails to properly invest in the transport in the smaller market towns of Berkhamsted and Tring, that will be required to dissuade residents in the outer developments from driving into town.

Chilterns AONB - The 2019 Glover Report recommended that the Chilterns AONB, including areas covered by this plan, should become England's next National Park and yet there is no mention of the report, or its implications, in the local plan or strategy. It is essential that this is taken into consideration and we do not damage the AONB in the process of ensuring we have sufficient suitable housing, infrastructure and communities for our population. That is why it is imperative that the numbers of homes needed is reviewed in light of current projections and that the location of those homes is reviewed in the aftermath of the pandemic, to repurpose abandoned existing office and potentially retail space.

QUESTION: Sustainability Appraisal comment	The proposed developments in Northchurch (West of Berkhamsted) contain insufficient social housing to meet local needs. For example, a semi-detached house in the Bearroc 2 site, adjacent to the new Northchurch developments, is priced between £500,000 and £800,000. This must be way beyond the means of people in Dacorum who need housing.

QUESTION: Sustainability Appraisal comment	<p>With reference to section F7 of Appendix F (pages 333 to 335 inclusive), I am writing to object in the most strongest terms to any proposal for mass development in the vicinity of Long Marston.</p> <p>The proposed site includes agricultural land, sites of archaeological importance, wildlife habitats and private properties, all of which would be decimated should such a proposal be implemented. We only have one planet and need to protect and cherish it as custodians for our children and their children. If growth continues at the current rate at some point in the future there will be no green spaces left. Is that the future you wish your grandchildren to inherit?</p>

The area includes multiple public footpaths and in the current pandemic has proved well used and critical for enabling people to get out and exercise and for their mental well being. If the proposal went ahead this opportunity would be denied for future generations.

The area is prone to flooding with many properties flooded over recent months and years. The impact of this on peoples' lives, both financially and mentally, has been huge. Families have had to vacate their homes and are still not able to move back in several months later.

There is a high pressure mains gas pipeline that runs through the proposed site taking gas to Marsworth, Tring and beyond. It would not be possible to build on or near this pipeline.

The loss of agricultural land would impact on our country's ability to feed it's own at a time when there is an ever increasing need for self sufficiency due to Brexit etc.

There are several sites of archaeological and historical interest e.g. Tiscott, Betlow, Ardwick included and/or very close to the proposed development site. It is important for our heritage that we preserve these sites.

I have lived in the area proposed for development for over 30 years and in that time have seen a huge increase in traffic and a big increase in the size and number of lorries using the lanes. The roads can not cope with the existing traffic levels with regular congestion outside the village school, at times a danger to life with lorries mounting the kerb to manage the turn at the crossroads at the heart of the village. Living where we do necessitates using a private car to access doctors, food shopping and all other amenities. As such any development of any size would result in at least 1, in all likelihood 2, additional cars extra on the road for each additional house built. This could potentially be an additional 3,800 to 7,600 additional cars on an already overloaded road network.

I fully appreciate that there is a need for more housing however this can and should be met by utilising brown field sites and smaller less imposing and more strategically placed new builds placed alongside existing major roads and infrastructure.

QUESTION: Sustainability Appraisal comment	The plan represents a land grab on green belt land - land that is critical for the well-being and welfare of Dacorum residents. It is a massive overdevelopment that will degrade the environment and ecology of an outstanding area of national beauty. It has a particularly damaging impact on Tring, where I live, with a planned increase in size of 55%. This will destroy the character of the town forever. Tring does not have the infrastructure to support such a enormous increase in size, the concomittant increase in cars and lorries will increase air pollution - air that is trapped already by the surrounding hills. The plan must be rejected outright.

QUESTION: Sustainability Appraisal comment	<p>The SA conclusion 7.1 states that the Council have been successful in achieving their SA objectives “by maximising the levels of development in the existing urban areas the amount of greenfield land needed will be minimised, thereby reducing the scale of these effects.”</p> <p>But DBC’s Plan does nothing of the sort. The facts simply do not support that conclusion. Look at the numbers – excluding windfall, only 23% of the planned development to 2050 is on Brownfield sites, leaving 77% to be built on Green Belt or Greenfield sites (64% Green Belt). This is not a ratio that in anyway suggests that the DBC have effectively analysed urban capacity correctly or maximised “the levels of development in the existing urban areas”.</p> <p>CPRE Herts have come to the same conclusion that DBC underestimate potential brownfield regeneration opportunities: “The proposed local plan fails to take into account the impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which are likely to result in much greater conversion of commercial space (especially office and retail) to residential use. The potential for such windfall provision of housing throughout the borough is likely to be much higher than that identified in the proposed plan. As a result, such a windfall many of the proposals for development on Green Belt and greenfield sites outside of existing towns and villages are likely to be unnecessary.</p> <p>Dacorum Borough Council should consider promoting mixed use living spaces in town centres. This has the potential to provide much needed affordable housing and provide a sustainable transport solution for local communities. The plan lacks a vision for the long- term future of retail and leisure parks that create better people friendly places and that are not designed around cars. A good example of mixed-use living spaces in town centres is the recent re-development of a retail park in Watford.</p> <p>In the light of recent events (Covid and Brexit) and trends in the retail sector, the government has announced a new approach to promotion of redevelopment and changes to the way our urban land is used, in particular the reconsideration of how much, and which existing retail, industrial and commercial land and premises can be more efficiently and sustainably used in a different way. The now-expanded permitted development rights allow commercial space to be converted to residential (as well as adding additional storeys on top) without need for planning permission.</p> <p>This new opportunity appears to have been ignored in the preparation of the proposed plan.”</p> <p>I have already mentioned the lack of consideration. to post Covid world, touching on the potential increase in urban development opportunities with changing work practices post-Covid.</p>

In section 7, paragraphs 7.6, 7.9 and Table 2 are confusing when comes to windfalls. Both 7.6 and 7.9 state that 200 homes pa have been used but Table 2 only shows 2,408 in total which equates to 133.8dpa.

Paragraph 7.9 states “Our analysis indicates that windfall sites will play an important part in the housing programme (at 200 homes pa). They are made up of a wide range of small to large sites from a variety of sources that have been calculated using historic delivery rates and expected future trends. We believe it is justified based on past local evidence and is a reliable source of supply across the Plan period.”

But DBC’s Urban Capacity Study shows windfalls have come on-line at the rate of 306.2dpa (4,287 total) over the last 14 years. In projecting forward for the totals in Table 2, DBC have effectively reduced their windfall expectation by a massive 56% from what has been achieved in the last 14 years.

From my research, DBC seem to have a different view of “expected future trends” than most other observers, including Government, who expect increased windfall urban development as working practices change post Covid and change of use applications increase.

These numbers are of critical importance when it comes to offering our precious Green Belt the protection that the NPPF demands.

Even if taking the windfall rate of 200dpa mentioned in paragraphs 7.6 and 7.9, urban capacity over the life of the Plan would increase to 12,146, which equates to a near 100% uplift over the 341dpa requirement suggested by the 2018-based ONS housing need projections for Dacorum.

Figures from the past 14 years and the knowledge of changes in working practices will almost certainly lead to windfall completions in excess of 50% higher than the 200dpa quoted in paragraphs 7.6/7.9 and more than 129% higher windfalls than quoted in Table 2.

The table below, sourced from Berkhamsted residents Action Group, illustrates the importance of this point and how it affects the amount of Green Belt release required to meet the ‘non-target’ of 922dpa, and also illustrates just how DBC have not at all produce a plan that even attempts to maximise development in existing urban areas.

And the table does not account for increased change of use windfalls that is accepted by Government as likely to be a trend going forward. Nor does it reflect the now-expanded permitted development rights highlighted by CPRE Herts, but the final column (Last 5yr Ave) suggests the windfall trend for Dacorum is already increasing.

Based on data from:

Conclusion 7.1 goes on to say “In addition, allocating sites in the most sustainable edge of settlement locations will also help to reduce adverse effects, particularly those relating to transport.”

Again, this is a statement based on aspirations rather than a conclusion derived from facts. At least in terms of the growth areas being promoted around Berkhamsted. Yes, they are edge of town, but situated on steep valley sides (some gradients in excess of those found on the Tour de France) and ridge top locations at some distance from the town centre, facilities and the railway station. They will certainly not “help reduce adverse effects, particularly those relating to transport issues”.

With respect to Berkhamsted, these locations can only do the opposite and add to the adverse effect, particularly those relating to transport issues.

The SA report seems to give a large weighting to the transport connectivity of Berkhamsted. While Berkhamsted is served by a very good rail service, that service was at capacity (pre-pandemic) I take issue with bus services being portrayed as good.

The “high frequency bus service (No.500)” referred to in C31 only operates 3 buses per hour Monday-Friday, 2 buses per hour on Saturdays and a single hourly service during Sunday shopping hours. There is no evening service or early services on Saturdays, while it also suffers reliability issues due to its length.

Berkhamsted does not have a sustainable transport system in place and promoting growth on valley side and ridge-top Green Belt locations will only reduce those sustainability credentials further.

On a different aspect of sustainability, water supply in this area is constrained being supplied by the local aquifer which also feeds our Chalk Streams. The Environment Agency says that abstraction is to be restricted to 'current' levels. This poses a challenge to the Infrastructure Plan and is a critical aspect of the proposal to increase dwelling numbers by over 20% in this locality. New supplies of water for this area are not likely to be possible until after 2030.

The growth proposed by the Strategy would require substantial infrastructure improvements in order to transport and treat wastewater and sewage. This could take 10 years plus.

Taking a more critical view, the DBC Sustainability Appraisal (SA) report Appendix C does identify the chronic issues revolving around water and wastewater, but there is nothing in the plan to address these issues. DBC's usual answer is that "developers have a right to connect and development cannot normally be resisted on the grounds of inadequate water supply or sewerage capacity."

I amongst others would query whether the Borough is correct in this respect. Things may have moved on but I understand that in the 70's there was a moratorium on house building in South Devon until improved sewage disposal facilities were built, and in Herefordshire due to pollution there is a moratorium on all house building in the River Lugg's catchment area.

Overall, the SA report suffers from the usual confirmation bias traits that accompany analysis that requires specific outcomes to be justified. It looks like the DBC plan is about how to hit a target given rather than considering good planning for the right houses in the right places.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment

Table 4-1: Key sustainability Issues and Opportunities

- *‘Ashridge SAC/SSSI, Tring Park, Tring Reservoirs and the Grand Union Canal are all reported to be experiencing visitor pressures. As the urban population increases, pressures on access to the countryside and these key attractions will increase.’* Yet there is no further mention of these in the Plan and no proposed mitigating action.

Section 5.5 ‘The Council’s preferred approach’

- Page 43. A stated consideration is *‘minimising, where possible, adverse impacts on the highway network and seeking to maximise opportunities for supporting sustainable modes of travel’*. As I noted previously, the options for both road connections and sustainable travel have NOT been adequately explored for a Tr03/Tr02, in particular. The north–south road, connectivity has not been considered beyond vague notions that something will be required. **This is nowhere near concrete enough.**
- On page 46, *‘[the Council] considers the allocation of 1,400 homes at East of Tring will enable significant amounts of public open space to be provided, including a new public park of around 20 hectares on land classified as Grade 2. The Council considers that these requirements mitigate the impact that development would have on this particular objective.’* Twenty hectares is less than one sixth the area of the existing Tring Park, which elsewhere in the same document (Page 16) is already reported to be suffering from ‘visitor pressures’. The provision of 20 hectares of public park is inadequate, especially coupled with the lack of further mitigating action for developing on Green Belt land and the absence of any joined-up plan for linking other green spaces impacted by the proposed developments.
- The following is identified as a ‘key sustainability issue’: *‘Ashridge SAC/SSSI, Tring Park, Tring Reservoirs and the Grand Union Canal are all reported to be experiencing visitor pressures. As the urban population increases, pressures on access to the countryside and these key attractions will increase.’* Yet there is no further mention of these in the Plan and no proposed mitigating action
- We disagree strongly with the conclusions reached with respect to Tring on several of the stated The conclusions reached are not consistent with the reasons given, place insufficient emphasis on mitigating negative aspects and contradict other stated conclusions – as expanded upon in the following sections.
- Page 43. A stated consideration is *‘minimising, where possible, adverse impacts on the highway network and seeking to maximise opportunities for supporting sustainable modes of travel’*. As noted elsewhere in this response, the options for both road connections and sustainable travel have NOT been adequately explored. In particular for a Tr03/Tr02, north– south road, connectivity has not been considered beyond vague notions that something will be required. This is nowhere near concrete enough.
- On page 46, *‘[the Council] considers the allocation of 1,400 homes at East of Tring will enable significant amounts of public open space to be provided, including a new public park of around 20 hectares on land classified as Grade 2. The Council considers that these requirements mitigate the impact that development would have on this particular objective.’* Twenty hectares is less than one sixth the area of the existing Tring Park, which elsewhere in the same

document (Page 16) is already reported to be suffering from 'visitor pressures'. The provision of 20 hectares of public park is wholly inadequate, especially coupled with the complete lack of further mitigating action for developing on Green Belt land and the absence of any joined-up plan for linking other green spaces impacted by the proposed developments.

QUESTION: Sustainability Appraisal comment Pages 333 to 335 Section F of the appendix.
 I'm staggered by the area propped for development given the availability of far more suitable land, i.e. not flooded half the year, around the two nearby airfields which are both on much higher ground and are already brownfield sites.
 The fact that there is a possibility of people being forced to sell their land to enable this proposal to go ahead is abhorrent to me as an ex-Zimbabwean where the appropriation of land has led to disaster for the economy. I can just about understand it for HS2 as that is where the line is going but this is going too far.

QUESTION: Sustainability Appraisal comment	<p>I have just read that there is a planned development of 30 dwelling in Ebberns Road - This Road is unable to take anymore traffic, it is congested and dangerous and can bearly provide enough parking for the pre war built houses (Cottages with no ability to have driveways installed). If anything there should be an area made to provide parking for the established residents and the vulnerable adults bungalows that need parking for they are disabled or have mobile careres and family visiting .</p> <p>It also sits within the Pollution Zone monitored area AQMAs.</p> <p>Whilst I support the majority of the vision here is one example that totally discredits the Councils ability to think of the residents health and wellbeing = There are many an area with no issues that would be more suitable - I will be contacting the local MP regarding this proposal - Do something positive for the established residents who seem to get overlooked</p>

! Cancel or Reduced development and create parking for the roads existing residents to make the road safer - there is no other parking facilities in that area. please re think !

QUESTION: Sustainability Appraisal comment	<p>I strongly object to the Tring Delivery Strategy and the Local Plan which proposes 16,600 new homes to be built primarily on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years.</p> <p>This growth in household numbers is a 25% increase over the current housing, which would irrevocably change the character of our towns and villages and destroy valuable green belt habitat and amenity. Dacorum Borough have chosen to accept these Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and misguided algorithm.</p> <p>I support the need for a local plan and accept the need to build a reasonable number of new, sustainable and affordable properties in the Borough. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER</p>

than this plan projects. This figure post-pandemic is also likely to decrease as housing stock is created in urban centres as many businesses reduce overheads and costs, and exit to a more remote working environment.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements). There is little sustainable about the construction nor preserving of our heritage about this plan.

Rather than as an afterthought, sustainability should be at the absolute core of the proposed future developments in the Local Plan - this is recommended by national planning guidance and should be a given in the current climate. This draft Local Plan fails to demonstrate a pathway to local zero-carbon or enhancements to biodiversity. The plan is woefully unambitious and does not commit to any level of sustainability in its targets. The proposed plan has clearly prioritised house building growth and money/construction companies over considerations for the very real climate emergency we all face.

Several local authorities in England (e.g., Greater Cambridge, Reading and Liverpool City) have developed integrated local plans that take account of climate change, biodiversity, well-being and social inclusion. Beyond some hyperbole, there is no evidence in the proposed Local Plan of any viable action to deliver such an approach.

We must ensure the Local Plan commits to all new homes to be certified zero carbon and sustainable in order to address the climate emergency.

I, along with many of my fellow Tring residents call for:

- The number of new houses proposed in the plan to be substantially reduced.
- Dacorum to implement a local plan that includes firm and ambitious sustainable commitments. I believe all new buildings should be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.
- I call for the 40% minimum affordable homes objective to be enforced across the Borough. Too often developers in the past have been allowed to waive their affordable homes commitments.
- Trees and woodland are very valuable to the environment and the community's physical and mental health. I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, each new major development area.
- An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors.
- Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside boundaries. These

routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.

- The Local Plan should allocate land for new allotments for residents of new homes as well as laying out gardens to support 'Growing your own'(which is both sustainable and good for mental health)
- Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be widened. Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

We are facing a climate emergency and addressing this must be at the absolute core of Dacorum's Local Plan. Currently it is not. We have the knowledge and technology to make good affordable zero carbon sustainable homes. The Local Plan must prioritise this.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would</p> <p>clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment	<p>The fields of Tr02 and Tr03 to the east of Tring should not be developed. Tr02 and Tr03 are home to large amounts of wildlife, they provide a wildlife corridor between the reservoirs and Ashridge woods. Within these fields it is common to see wild deer and foxes roaming - the wild deer have travelled from Ashridge woods to graze in these fields. In addition, there are many species of birds including many varieties of birds of prey. These animals habitats will be decimated with the construction 1,800 houses, schools, supermarkets and lots of other infrastructure. Tr02 and Tr03 are too close to the Ashridge woods and AONB to be built upon without causing huge amounts of damage to the roaming and survival of the wildlife. Without a full wildlife assessment of the land the plan is not ready for consultation.</p> <p>The land Tr02 and Tr03 is liable to flooding as we have witnessed in January and February 2021 with waterlogged fields overflowing and leading to a river running down Marshcroft Lane. If there is development of this land it will inevitably lead to flooding of the land developed and flooding of the houses already adjacent to Tr02 and Tr03. Without a full flood assessment of the land the plan is not ready for consultation.</p> <p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment

I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn’ t broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site’ s relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific

basis, there is recognition that the land defined as “ East of Tring” fails to meet the efficient use of land objective and yet this isn’ t carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.
 Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment Water - building more houses on a chalk aquifer which is already under strain from the use of ground water supply and climate change is unsustainable. The ecology of the chalk streams is of international significance. The Bulborne which has its source in Dudswell and flows through Northchurch has been affected by over extraction in recent years.
 Residents report that they already have problems with water pressure. This has worsened with the building of houses at Bearoc Park and is set to get worse.
 This impacts on the natural ecology of the stream. Without provision for increased water demand, or adequate sewerage, the plan is unsustainable.

QUESTION: Sustainability Appraisal comment	<p>I do not believe that the actions proposed within the Plan for Tring meet sustainability aims. It does not give sufficient evidence for the need for extensive housing/loss of important countryside nor give detailed commitment to mitigating strategies.</p> <p>The plan identifies that a key sustainability issue is that 'Ashridge SAC/SSSI, Tring Park, Tring Reservoirs and the Grand Union Canal are all reported to be experiencing visitor pressures. As the urban population increases, pressures on access to the countryside and these key attractions will increase.' My experience is that the pandemic has increased the use of these areas considerably and that this use is likely to continue as the benefits for peoples physical and mental wellbeing are clear. I believe that the impact of local traffic increase, pollution and visitor numbers would have a very negative impact on these sites and that of Tring Park SSSI. The impact of these should be considered alongside housing need.</p> <p>Government policy seems clear that councils have responsibilities for assessing housing need alongside local environmental concerns rather than the former trumping the latter. The planned provision of public park of around 20 hectares would in no way compensate for the loss of open land/countryside on Green belt land, and would further impact on the above areas.</p> <p>On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results.</p> <p>Why is this? The land to the East of Tring is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment	<p>Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, I have serious concerns regarding the sheer scale of proposed development.</p> <p>The Council has failed to take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6 which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.</p> <p>I also acknowledge that recent Government guidance on calculating housing need has been, at best, confusing. I firmly believe that housing needs should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. The Council has based its calculations on the outdated 2014 based ONS data which, in my opinion, would result in a significant overestimate of housing and brings into question the soundness of any local plan based on them.</p>

QUESTION: Sustainability Appraisal comment	<p>Please take this email as my formal response to Dacorum's Local Plan (2020-2038) Emerging Strategy for Growth.</p> <p>I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.</p> <p>The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.</p> <p>Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.</p> <p>This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.</p> <p>The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.</p> <p>I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.</p> <p>I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.</p>

QUESTION: Sustainability Appraisal comment	<p>We wish to object to the plan for the following reasons.</p> <ol style="list-style-type: none"> 1 Although emphasising green spaces the plan increases housing by 25% and uses 2000 acres of valuable Green Belt and open spaces across the borough. If Covid has taught us anything it is that Green spaces are vital and must be kept in our local community. 2 Impact on Green Belt & Chiltern area of Outstanding Natural beauty (AONB). The scale of the proposed housing will have a detrimental impact on the natural environment 3 Underestimating Brown field potential (Q2 of consultation). Although the plan includes some brownfield suites the major housing developments are on the outskirts of Hemel, Berkhamsted and Tring. The plan fails to take into account the impact of Covid and recent working from home changes; in the near future more office and work sites may become available. <ol style="list-style-type: none"> 1 Unsustainable development (Q3 of the consultation) Focusing building on the outskirts of the main towns means that the developments are some distance from existing transport infrastructure. This will result in several thousand more cars on local roads. 2 More congestion on the roads, particularly impacting Potten End. The plans suggest traffic coming from Tring and Berkhamsted would use the new link road in North Hemel from the Dagnall road (B440) to J 8 on the M1, rather than using the old link road through Hemel. This is so close , the new link road is an unnecessary addition. Also there is no way for the traffic to get to the A41 From the B440. The route would take you up through Potten End and then the narrow streets of Berkhamsted. The leight on buzzard road is often queuing in the rush hour times at the moment especially to go over the bridge at Water End. The proposal would worsen this situation. It is unacceptable. 3 Water supply and waste water disposal (Q6) The chalk aquifer is already over abstracted and local residents are aware of the fragility of the water supply. The level of the new housing will put a severe strain on supply and disposal. There is the potential to damage the boroughs precious chalk streams. Dacorum and affinity water have recently spent time and money on improving the River Gade only for this plan to put it at risk. <p>We strongly object to the number of houses and the Motorway link proposed. The plan is based on figures the the government has now withdrawn. The plan should be based on the most recent ONS figures from 2018 which suggest a housing target for Dacorum of c. 500 houses pa, this is half the figure on which the plan is based.</p>

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment	Some concerns include Increased Flood Risk

Again because Berhamsted is situated in a valley during heavy rain and storms the drainage infrastructure often cannot cope. I have seen the road outside my house on many occasions turn into a small river, the tarmac has been lifted and even main drains burst. Anything that reduces the ability of the land to drain and hold water at the top of the hills should be rejected. These sites are situated at valley tops and would lead to more water runoff effecting those lower down the hills.

Air Quality

The plan needs to provide a comprehensive analysis to ensure we have a plan which ensures the reduction of air pollution. Sites should discourage car use, encourage walking and any development should have net zero emissions.

QUESTION: Sustainability Appraisal comment

- Flood risk - having lived in Berkamsted for a long time there is increasing evidence that the infrastructure already can not cope and we regularly see This is prevalent throughout the valley including around the Station where, despite major overhaul last year, it still floods. Building even more properties is going to undoubtedly make this worse
- There is still as lack of data on how we are going to ensure the Air Quality is protected and Berkhamsted can target net zero emmissions

QUESTION: Sustainability Appraisal comment	<p>DBC ignores the post-pandemic effects. It grossly underestimates windfall developments, it does not assess the use of brownfield sites or the in-filing that could easily take place in Hemel Hempstead where there are large areas pf unused mown grass (not environmentally beneficial – no meadow flowers etc.) and poorly maintained public open spaces that are scarcely used. All of these could provide excellent affordable terraced housing without encroaching on the Green Belt and make proper use of existing transport and civic facilities.</p> <p>I endorse everything said here by CRPE and BRAG with the proviso that there should be much much more infilling within Hemel Hempstead to balance the housing density in the various towns in the Borough.</p>

QUESTION: Sustainability Appraisal comment	<p>Water - building more houses on a chalk aquifer which is already under strain from the use of ground water supply and climate change is unsustainable. The ecology of the chalk streams is of international significance. The Bulborne which has its source in Dudswell and flows through Northchurch has been affected by over extraction in recent years. Many residents already have problems with water pressure. This has worsened with the building of houses at Bearoc Park and is set to get worse.</p> <p>This impacts on the natural ecology of the stream. Without provision for increased water demand, or adequate sewerage, the plan is unsustainable.</p>

QUESTION: Sustainability Appraisal comment	<p>Harrow agrees with the overall findings of the Sustainability Appraisal, which point to a strategy of balanced growth across the main settlements in the borough, including large-scale expansions on the edge of those towns, as the most sustainable option to meet the development needs of Dacorum. Informed by the Settlement Strategy (2017), the Sustainability Appraisal recognises that the larger settlements , including Tring, contain a wide range of facilities to support their own communities and surrounding settlements. They are also well-served by public transport infrastructure, including railway stations.</p> <p>Harrow has reviewed the Sustainability Appraisal for the draft allocation of land east of Tring (Tr03) and has comments relating to its scoring against the following SA objectives. Harrow has not reviewed the appraisal of other sites against the SA objectives and reserves the right to do so in due course.</p> <p>1. Biodiversity</p> <p>The preliminary chapters of the SA recognise that the significance of effects on biodiversity is dependent on the biodiversity value of the development sites, irrespective of whether they are greenfield or previously developed land. It goes on to recognise that new development provides opportunities for habitat enhancement and connectivity, particularly on large</p>

sites and, in particular that: “The provision of SANGs as part of large new developments would help to reduce recreational pressure on the Chilterns Beechwoods SAC, particularly at current ‘honeypot’ locations such as the Ashridge Estate”.

Harrow agrees with those overarching conclusions and is, therefore, disappointed that land east of Tring receives a negative score by virtue of being a large greenfield site ‘where there would be some loss of habitats’. In 2014 Harrow commissioned a phase 1 habitat survey of the land and annual ecological surveys have subsequently been conducted. Those reports demonstrate that the land is currently in agricultural use and of limited ecological value – with any such value being largely confined to existing mature hedgerows to fields south of and along Marshcroft Lane. Those hedgerows can be retained within a new enhanced green network as part of the development, offering positive benefits against this SA objective. Copies of the detailed ecological appraisal studies are enclosed and we trust the council will use those to amend the assessment of the site against this SA objective.

The SA recognises the opportunity that the allocation offers to provide SANGS and offers a minor positive rating against that objective. The illustrative masterplan demonstrates that the extent of SANGS is substantial and across the site there are significant opportunities to provide biodiversity net gain. The site should be awarded a major positive rating against that objective.

6. Soils

The SA states that the majority of the site comprises Grade 2 agricultural land and, therefore, awards a major negative score for the site against this SA objective. The source of this conclusion is not clear; however, Harrow recognises that it is unlikely detailed soil analysis has been carried out for each site. Harrow has commissioned an independent study of the site by Reading Agriculture; including detailed soil sampling and laboratory analysis. It confirms that the majority of the land is, in fact, lesser quality Grade 3 land with areas of Grade 2b. A copy of the Agricultural Land assessment is enclosed and we trust that the council will use that to amend the assessment of the site against this SA objective.

8. Historic Environment

The site does not contain any designated heritage assets or non-designated assets. The setting of adjacent heritage assets has been considered in preparing the illustrative masterplan for the site. While there is evidence of some crop markings south of Marshcroft Lane, an archaeological report prepared on behalf of Harrow demonstrates that they are likely to be of limited significance and , in any event, could be retained in situ as part of the development. The impact on heritage assets is, therefore, likely to be neutral and the assessment of the site against this SA objective should be amended to reflect this.

QUESTION: Sustainability Appraisal comment	<p>Water</p> <p>Simply put, we have a problem here in Dacorum with availability of water for peoples' homes and businesses. The River Gade ran dry in 2019, and later that year, the Council passed a unanimous motion to protect the Chalk Streams, as an internationally significant biodiversity asset. As noted above, although DM33 states a need to avoid extracting water from the ground, in particular our chalk streams, it is very difficult to see how this can be managed, with such an accelerated house building plan.</p> <p>The Chalk streams must be protected.</p> <p>Climate</p> <p>The UK has a target of reaching net zero carbon by 2050. However, some industries are extremely difficult to decarbonise, for example, airlines, and certain areas of manufacturing. As a result it is essential that where the solution is known, these actions be taken as quickly as possible.</p> <p>There are lots of things that can be done to reduce the carbon footprint of Dacorum, and it is essential that any house building programme include as many of these as possible. There are lots of positive ideas in the Local Plan to help tackle climate change, but in reaching net zero, the first thing that must be considered is measurement. The removal of land from the green belt will reduce carbon sequestration from soils and plant life within our borough. The value of this carbon needs to be included when working towards net zero.</p> <p>House builders should also be required to calculate the carbon costs of construction, including, but not limited to, building materials, transport of materials, and equipment use. On top of this the carbon costs of use of the dwellings should be worked out, and confirmed once in use, and the carbon cost of disposal or recycling of the homes.</p> <p>It is also essential that when we say that we are building homes in sustainable places, we are not suggesting that every place in (for example) Hemel is equally sustainable. New communities which are far from the train station, and in fact located close to large roads, will encourage car dependent communities unless significant steps are taken to ensure alternative transport is available.</p> <p>Biodiversity</p> <p>It is welcome that this Local Plan includes provision for 10% net biodiversity gain, however it must be noted that this is an extremely challenging task when taking land out of greenbelt, and where this happens, it will be necessary for the Developer, the Council and other stakeholders to work very hard to produce a plan that can provide this.</p>

I would also like to see 10% net biodiversity gain for all infrastructure and non-housing projects across the borough.

Transport

As noted above, there are many proposed locations in this plan which are in desperate need of a detailed transport plan which is put in place in an appropriately phased manner to prevent the developments becoming car dependent dormitory communities.

To date, housing is not generally built with transport in mind, but this must be a priority in the future. Road layouts should be decided based on encouraging bus, train and cycle use. In certain areas in Dacorum these would need to be electric cycles due to topography, and so if large housing estates are put in location which would require significant hill cycling, then buses will become more important, unless electric cycles become affordable, or a scheme can be put in place.

Many of the proposed locations such as the green belt north and east of Hemel, are not in sustainable locations. If recent proposals are a guide, then it is likely that these will be largely executive housing, and we must acknowledge that the people that can afford this housing, which is likely to be many times the affordability ration used by the ONS (4 times average salary) will probably be working in London. On top of this they will be able to afford cars, and if commuting, will want to drive to the train station. As a result, this plan risks placing people that can afford a car, and are most likely to need the train station, at too great a distance to walk to the station, and without reliable public transport. To avoid these people having to use a car to get to work every day, and the resultant impacts on our traffic and net zero obligations, our public transport and cycling routes would require enormous investment. Dacorum's roads cannot hold any further traffic, and certainly not 20% more.

The Draft Infrastructure Delivery Plan ('IDP') lays out a hierarchy of road users, and requires any transport strategy or scheme to consider in the following order:

1. Opportunities to reduce travel demand and the need to travel
2. Vulnerable road user needs (such as pedestrians and cyclists)
3. Passenger transport user needs
4. Powered two wheeler (mopeds and motorbikes) user needs
5. Other motor vehicle user needs

This is welcome, but it must be matched with policies elsewhere. For example, in the draft IDP there is a categorisation of infrastructure spending as critical, essential and required, and also (Tables 8, 9 and 10) a further classification of transport schemes as of 'major relevance', 'lesser relevance' and 'local'. Only those schemes classified as of 'major relevance' are in the 'critical' category, and schemes of lesser relevance are largely 'green' infrastructure.

To date, Garden Communities projects across the country have failed to bring the green communities their name promises. The largest proportion of money in these projects has been spent on roads, and unless steps are taken to prevent road infrastructure being prioritised over other infrastructure when looking for funding, then we will fall into this same trap. Smaller cycle ways and other alternative green transport infrastructure should not be competing against large road improvement infrastructure, which has often been planned for many years, without availability of funding. Garden Communities projects should not simply be a process by which this funding is gained, if they are, then they will further exacerbate climate change, rather than help to mitigate it.

QUESTION: Sustainability Appraisal comment	<p>Yes I have comments. DBC ignores the post-pandemic effects. It grossly underestimates windfall developments, it does not assess the use of brownfield sites or the in-filing that could easily take place in Hemel Hempstead where there are large areas of unused mown grass (not environmentally beneficial – no meadow flowers etc.) and poorly maintained public open spaces that are scarcely used. All of these could provide excellent affordable terraced housing without encroaching on the Green Belt and make proper use of existing transport and civic facilities.</p> <p>I endorse everything said here by CRPE and BRAG with the proviso that there should be much much more infilling within Hemel Hempstead to balance the housing density in the various towns in the Borough.</p>

**QUESTION: Sustainability
Appraisal comment**

As stated in the Sustainability Appraisal: “any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects

... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”

Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure

There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.

Biodiversity (SA Objective 1)

Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.

Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.

Flood Risk (SA Objective 3)

SA states it has found ‘no predicted effects’ against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021).

Photo of area for development taken by a local resident (no copyright) ATTACHED TO COMMENT

Greenhouse gas emissions (SA Objective 4)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and

- the creation of carbon fixation via rewilding and protection of natural habitats.

Landscape & Townscape (SA Objective 9)

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a

particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would

clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment The Climate Crisis should be at the forefront of all discussions about development. There continues to be a severe impact upon the planet of environmental destruction. The environmental impact of building 1800 homes plus two primary schools and a secondary school on sites TR02 and TR03 has not been properly assessed. By any measure this is a large development for a small town and, I think, disproportionate. It is not sustainable development.

TR2 and TR3 are beautiful open areas, lying at the foot of the Chilterns AONB and the wooded slopes of Ashridge; building on them would cause irreversible and permanent damage to the environment and the wildlife living there.

The cumulative effect of building on several sites in Tring, including TR02 and TR03 which adjoin, has not been addressed.

QUESTION: Sustainability Appraisal comment	Building more houses on a chalk aquifer which is already under strain from the use of ground water supply and climate change is unsustainable. The ecology of the chalk streams is of international significance. The Bulborne which has its source in Dudswell and flows through Northchurch has been affected by over extraction in recent years. Many residents already have problems with water pressure. This has worsened with the building of houses at Bearoc Park and is set to get worse. This impacts on the natural ecology of the stream. Without provision for increased water demand, or adequate sewerage, the plan is unsustainable.

<p>QUESTION: Sustainability Appraisal comment</p>	<p>Comment on Sustainability have been comprehensively addressed in previous comments.</p> <p>Biodiversity (SA Objective 1)</p> <p>We must achieve a genuine net gain in biodiversity. This can be achieved by rewilding and planting trees protected for future generations. We call for every 1 acre of green belt that is developed a further 2 acres are rewilded with public access. We call for Biodiversity and mandatory commitments to incorporate wildlife and wildlife corridors into every new development.</p> <p>Greenhouse gas emissions (SA Objective 4)</p> <p>This has been extensively covered in previous comments. We call for every new property to be net zero including Scope 3. It must be mandatory that every home is dual aspect and well insulated. Solar panels and heat pumps must be mandatory where it can be proved they will be efficient. The replanting of new woodland as suggested above could be used to offset carbon.</p> <p>Air Quality (SA Objective 5)</p> <p>Due to its topography air pollution in central Berkhamsted can be very poor. We must incorporate electrical vehicle charging points in every new home as a mandatory requirement to encourage electric vehicles along with solar energy to power them. We must invest in safe cycling routes and electric public transport. Tring has 2 electric charging points currently which is completely inadequate for its current population. Electric Vehicle charging points must be incorporated into existing Victorian housing stock in the towns to help mitigate any increase in air pollution by additional homes.</p>

QUESTION: Sustainability Appraisal comment	<p>here is currently a large estate being built off Ickniel way, Tring. With this and the added pressure from extensive building in Pitstone the traffic along Ickniel Way during the 'rush hour' makes it difficult to turn onto the road from any junction in Tring. The noise of traffic has also increased.</p> <p>The addition of another 2730 houses will add at least that number of vehicles, possible more given the number of houses which now have two or more vehicles.</p> <p>The roads around Tring are not suited to this quantity of traffic. Ickniel Way, despite being the main route between Dunstable, Tring and Aylesbury is a residential street. Brook Street is a narrow road with vehicles parked along it's length restricting traffic flow. The A41 bypass may have the capability but vehicles in Tring still have to get to it.</p> <p>Although there is mention of improved public transport this is dependant on the private companies who would be supplying it.</p> <p>Improved pedestrian and cycle access</p> <p>The planned developement removes two farms at a time when we should be looking at producing more food for the population.</p> <p>I do not see how any of these planned developments can blend into the local, small town environment, or how building on 'green belt' will benefit the environment in general.</p>

QUESTION: Sustainability Appraisal comment	DCB ignores the post-pandemic effects. It grossly underestimates windfall developments, it does not assess the use of brownfield sites or the in-filing that could easily take place in Hemel Hempstead where there are large areas pf unused mown grass (not environmentally beneficial – no meadow flowers etc.) and poorly maintained public open spaces that

are scarcely used. All of these could provide excellent affordable terraced housing without encroaching on the Green Belt and make proper use of existing transport and civic facilities.
 I endorse everything said here by CRPE and BRAG with the proviso that there should be much more infilling within Hemel Hempstead to balance the housing density in the various towns in the Borough.

Yes / No * Yes * No	
QUESTION: Sustainability Appraisal comment	<p>As stated in the Sustainability Appraisal: <i>“any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects</i></p> <p><i>... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”</i></p> <p>Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure</p> <p>There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.</p> <p>Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land</p> <p>Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.</p>

SA states it has found 'no predicted effects' against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021).

[PLEASE SEE ATTACHED IMAGE]

Photo of area for development taken by a local resident (no copyright)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment	<p>Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, I have serious concerns regarding the sheer scale of proposed development.</p> <p>The Council has failed to take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6 which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.</p> <p>I also acknowledge that recent Government guidance on calculating housing need has been, at best, confusing. I firmly believe that housing needs should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. The Council has based its calculations on the outdated 2014 based ONS data which, in my opinion, would result in a significant overestimate of housing and brings into question the soundness of any local plan based on them.</p>

QUESTION: Sustainability Appraisal comment	I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within

a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a widespread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required.

There is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment Tring in Transition comments have clearly highlighted the inadequacy of the Council's Sustainability Appraisal, especially in relation to the proposals in the Tring area. Impacts on the environment (SAC, SSSI's etc), transport issues, flooding, etc are not adequately appraised.

The Sustainability Appraisal needs to be completed prior to the completion of the Local Plan. Without this there can be no accurate conclusion as to whether the proposals are sustainable and comply with legislation and the councils own policies on sustainability and protecting the environment. The levels of the proposed growth are highly likely to result in the need for mitigation measures that require NEG. Safeguarding the existing high levels of biodiversity interest is not the same as providing NEG.

Sustainable growth for a small market town is incompatible with the draft plans excessive growth proposals.

QUESTION: Sustainability Appraisal comment	<p>SA1 biodiversity - the ancient hedgerows on Bell Lane and Darrs Lane (BK06) and the Lockfield site (Bk07) are important habitats in themselves and they also form important wildlife corridors between Northchurch Common, the canal area and the Chilterns AONB. This will have a serious impact on biodiversity.</p> <p>Water runoff from these developments will drain into the River Bulbourne and damage the fragile ecosystem of this rare chalk stream.</p> <p>SA2 water resources - increased abstraction to supply the new developments will further impact the River Bulbourne which is already dry in many summers due to excessive abstraction.</p> <p>SA3 flooding - the Lockfield site Bk07 is a potential risk for flooding in itself. Building on all the new areas of Bk06 & Bk07 will increase the water runoff and increase the risk of low lying areas of Northchurch. Darrs Lane is already a river during heavy rain. The gullies get blocked quickly in any rain storm and water accumulates at the end of Granville Road and at the bottom of Darrs Lane.</p> <p>SA5 Air Quality - there is already a pollution hotspot on Northchurch High Street between New Road and Darrs Lane. The increased traffic from the new developments will lead to more standing traffic and worse pollution which will affect residents and the children in the nearby school.</p> <p>SA8 Historic environment. The large developments within and around Northchurch will irreversibly affect the historic character of Northchurch which pre-existed Berkhamsted.</p>

QUESTION: Sustainability Appraisal comment	<p>I support the submissions of the Chiltern Countryside Group (CCG) and the Grove Fields Residents Association (GFRA) on this question.</p> <p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard to the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet</p>

this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

Insufficient weight and assessment has been given by the LP to those impacts and obligations. The LP Interim Sustainability Appraisal (non-technical summary) provides assessment criteria and then assesses these against options A-E if developed.

I do not accept the assessments for options A, C-E as accurately reflecting the true impact on (a) landscape (b) historic environment and (c) sustainable locations. I do not accept that developments of the Green Belt sites in Tring and Berkhamsted which are included in those options would be 'unsustainable' with only 'minor adverse impacts on the SA objectives'.

The Green Belt sites located in Tring and Berkhamsted identified in the LP would suffer the highest level of adverse impact and should therefore be assessed as 'very unsustainable' with 'significant adverse impacts on the SA objectives'.

I question whether the consultants employed for the Sustainability Assessment have actually visited these sites, or indeed whether Councillors representing areas other than Tring or Berkhamsted have done so. These are large swathes of significant green, tranquil and natural landscape, which informs the setting of the Chilterns AONB, a local and national high quality public asset, which any development of those sites would permanently destroy.

I do not accept the statement that for these sites: 'new large greenfield developments could provide opportunities for biodiversity enhancements and make use of district heating systems'. The sites in question already have significant biodiversity which we believe would be challenging to 'enhance'.

QUESTION: Sustainability Appraisal comment The Sustainability Appraisal fails to recognise that the most positive impact on the environment and climate would be not to overdevelop the borough. If implemented, the proposed Local Plan will over-provide housing and employment space based on the flawed algorithm and out-dated data the Council is using to determine need. Not developing the 850 hectares of green space which are identified in this proposed Plan, and instead leaving this land for nature, wildlife, recreation and carbon sequestration, is the best and most sustainable approach the Council could take.

QUESTION: Sustainability Appraisal comment	<p>It will be noted from the above that in presenting the positive aspects of the Duckhall Farm scheme, we have touched in part on flaws within the Evidence Base. In this regard, we would draw particular attention to the following:</p> <ul style="list-style-type: none"> Sustainability Appraisal – When looking at the comparison of the different site options for Bovingdon at Table 5-8 on page 39 of the SA Report, it is evident that Duckhall Farm scores more highly than Grange Farm, even on the analysis presented. However, the SA analysis contains inaccuracies, not least in that it scores Duckhall Farm and Grange Farm equally in terms of accessibility by walking and cycling (as discussed above it is evident that in terms of ability to walk safely to shops and services, the Duckhall site is far superior), and because in respect of community cohesion, the Grange Farm site is credited because of the suggested delivery of the school site (when as we have identified this is not required or deliverable), whilst the Duckhall site is unreasonably marked with a negative score because it is suggested that somehow its location with the grounds of the prison to the north could cause anxiety – not only is this wholly inconsistent with the allocation of The Mount, but there is no evidence whatsoever to back up this unusual hypothesis, it is pure and unjustified. Therefore when read properly and when properly understood, it is clear that the Sustainability Appraisal supports Duckhall Farm over the alternatives, not Grange Farm;

QUESTION: Sustainability Appraisal comment As stated in the Sustainability Appraisal: *"any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects*

... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants"

Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure

There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.

Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.

Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.

SA states it has found 'no predicted effects' against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021).

Photo of area for development taken by a local resident (no copyright)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment	I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with

regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as East of Tring fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment	The Plan is clearly not sustainable. The majority of development is located on the fringes of the main towns some considerable distance from town centres, transport hubs and community facilities. Only 23% of housing development is proposed on brownfield sites - hardly a sustainable approach. Given the changes in peoples' working and shopping habits, the Council has failed to take into account the number of empty premises that can be used for housing. A major new road is proposed to the north of Hemel Hempstead which is an indication of out-dated thinking relying on the car. Little is made of promoting public transport and although walking and cycling is mentioned this is impractical given that some of the major sites around Hemel Hempstead and Berkhamsted are on the valley ridges. Considerable loss of the Green Belt and open land will certainly not make a positive contribution to the fight against climate change.

QUESTION: Sustainability Appraisal comment	<p>As stated in the Sustainability Appraisal: <i>“any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects ... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”</i></p> <p>Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure</p> <p>There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.</p> <p>Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.</p> <p>Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.</p> <p>Flood Risk (SA Objective 3)</p> <p>SA states it has found ‘no predicted effects’ against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021).</p>

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment

I strongly object to the Dacorum Local Plan which proposes 16,600 new homes to be built mainly on 850 hectares of green belt around Tring, Berkhamsted and Hemel Hempstead in the next 18 years.

This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and are based upon outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falling birth rates and the decline in immigration following Brexit will no doubt continue to decrease this projection.

In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, recycling centres and employment needs (to name but a few crucial infrastructure requirements) and the detrimental impacts on our wildlife and countryside that will extend far beyond just the green belt land being concreted over.

The proposed plan has clearly prioritised house building growth over considerations for the climate emergency, and the health and well being of the existing residents and infrastructure.

QUESTION: Sustainability Appraisal comment The Sustainability Appraisal report lists the first 2 key objectives as follows:-

1 To protect, maintain and enhance biodiversity and geodiversity at all

Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000 + more people and their cats and dogs into them, can not be done without damaging biodiversity.

1 To protect, maintain and enhance water resources (including water quality and quantity)

DBC's own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already overextracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. That's another 7.5 million litres a day - minimum.

Development at the level proposed is simply not compatible with these 2 objectives.

With regards to renewable energy, although it is mentioned that these proposals would be 'positively welcomed', they should instead form part of the local plan in order to provide energy for the excessive amount of extra buildings Large scale solar and/or wind farms as well as other technologies should be incorporated into the plan.

QUESTION: Sustainability Appraisal comment	<p>Q 6 Sustainability Appraisal</p> <p>The enormity of the proposals will put pressure on the water supply.</p> <p>The Chilterns chalk streams are very fragile and any additional need to pump water will have disastrous effects on the Gade and Bulbourne</p> <p>The increase in traffic such development will bring will put unsustainable pressure on the roads and transport system.</p> <p>The new road from the M1 to the Leighton Buzzard road will have unforeseen detrimental consequences.</p> <p>Where are all these people going to go to the Dr, Dentist, we do not have a Hospital fit for purpose within Dacorum – this proposal will be a health and welfare disaster.</p> <p>Where will the children go to school – I can only see plans for 5 'potential' new schools to accommodate a potential 34,000 children (2.4 children per household).</p> <p>Bio-diversity – loss of habitat and recreational green space by over development.</p>

The NT Estate at Ashridge is listed as an amenity green space by DBC and both South Beds and Aylesbury Bucks CC it cannot cope with the additional footfall during the pandemic, additional use will destroy the fragile bio diversity.

Climate Change – providing 17,000 new homes and 120,000 sqm of industrial floors pace will result in unsustainable greenhouse gas emissions.

Air Quality The increased traffic by these developments is unacceptable detrimental effect on air quality.

Insufficient attention to protection from environmental pollution.

Waste disposal – where is it all going to go? Insufficient consideration.

QUESTION: Sustainability Appraisal comment

- **Water Supply**

Much of the water supply for the Hemel Hempstead area comes from the aquifers underneath the Upper Gade Valley. There is recent evidence (see below) that these are being over extracted now. Therefore, the likelihood that they would be able to sustain the demands of the development highlighted in the Plan is remote. The impact on the River Gade during dry periods would mean it is very likely to dry up with the obvious devastating effect on the wildlife that exists around it. It did dry up some 20 years ago as a result of over extraction. We are aware of a well in Gaddesden Lane which is monitored by the water authorities on a regular basis, measuring both depth and water quality. As no water is pumped for domestic or commercial consumption, the depth of water truly represents the level of the water table. It has been noted for some time this level has been getting lower every year.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment	85% of Dacorum is rural with 60% being Green Belt. We should not allow the impact of further building works on an environment that has given so much to so many over the last year. The impact on the Chilterns AONB would cause distress to both human and animals let alone the stress to the important Chilterns Beechwoods. The plan for improvement does not seem to take into account what we have which should be properly maintained. Why create a bigger problem in the name of future development?

QUESTION: Sustainability Appraisal comment

I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would

clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected

under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

Equally, building in the centre of town (Tr06) would cause irreversible damage to a historic town.

QUESTION: Sustainability Appraisal comment

Water - building more houses on a chalk aquifer which is already under strain from the use of ground water supply and climate change is unsustainable. The ecology of the chalk streams is of international significance. The Bulborne which has its source in Dudswell and flows through Northchurch has been affected by over extraction in recent years. Many residents already have problems with water pressure. This has worsened with the building of houses at Bearoc Park and is set to get worse. This impacts on the natural ecology of the stream. Without provision for increased water demand, or adequate sewerage, the plan is unsustainable.

QUESTION: Sustainability Appraisal comment	Table 4-1: Key sustainability Issues and Opportunities (Page 16)

The report identifies a “key sustainability issue” as : “Ashridge SAC/SSSI, Tring Park, Tring Reservoirs and the Grand Union Canal are all reported to be experiencing visitor pressures. As the urban population increases, pressures on access to the countryside and these key attractions will increase.”

Although Ashridge is mentioned in the Local Plan, none of the other areas get mentioned at all, nor does College Lake, also on the edge of Tring. These are serious omissions. With proposed 55% increase in size of Tring (which equates to roughly 5,000 more cars) there will be huge pressure on all these sites, with “guerrilla parking” on public roads (often in dangerous places) and on verges. It is essential that this is properly addressed with mitigations within the Plan.

QUESTION: Sustainability Appraisal comment	<p>The Sustainability Appraisal report lists the first 2 key objectives as follows:-</p> <p>1 To protect, maintain and enhance biodiversity and geodiversity at all</p> <p>Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000 + more people and their cats and dogs into them, can not be done without damaging biodiversity.</p> <p>1 To protect, maintain and enhance water resources (including water quality and quantity)</p>

DBC's own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already overextracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. That's another 7.5 million litres a day - minimum.

Development at the level proposed is simply not compatible with these 2 objectives.

With regards to renewable energy, although it is mentioned that these proposals would be 'positively welcomed', they should instead form part of the local plan in order to provide energy for the excessive amount of extra buildings. Large scale solar and/or wind farms as well as other technologies should be incorporated into the plan.

QUESTION: Sustainability Appraisal comment	<p>As stated in the Sustainability Appraisal: <i>“any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects ... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”</i></p> <p>Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure</p> <p>There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.</p> <p>Biodiversity (SA Objective 1)</p> <p>Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.</p> <p>Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.</p> <p>Flood Risk (SA Objective 3)</p> <p>SA states it has found ‘no predicted effects’ against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021). [SEE ATTACHED PHOTO OF DEVELOPMENT AREA] <i>Photo of area for development taken by a local resident (no copyright)</i></p>

Greenhouse gas emissions (SA Objective 4)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats

Landscape & Townscape (SA Objective 9)

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would</p> <p>clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment	Sites of Least Environmental Value In accordance with the paragraph 171 of NPPF, the plan should allocate land with the least environmental or amenity value. Natural England expects sufficient evidence to be provided, through the SA and HRA, to justify the site selection process and to ensure sites of least environmental value are selected, e.g. land allocations should avoid designated sites and landscapes and significant areas of best and most versatile agricultural land and should consider the direct and indirect effects of development, including on land outside designated boundaries and within the setting of protected landscapes.

QUESTION: Sustainability Appraisal comment	Water availability Appendix C17 The comment reflects the concerns residents have about the aquifer and abstraction, set out in stark terms: Landscape C27 While the term ‘irreversible’ is explicitly recognised for this Option [large scale release of Green Belt], this and the adverse impact on AONB is only implied where loss of Green Belt is proposed for other Sites.

The bus route 500 operates as a commercial service by Arriva at a frequency of 3 buses per hour on Monday-Friday, 2 buses per hour on Saturdays and 1 bus per hour on Sunday shopping hours. There is no evening service or early service on Saturdays. Due to its length, it also suffers from reliability issues. Despite fulfilling the criteria of a “good public transport service” in the Topic papers, there is a paucity of services in other directions from Berkhamsted. We do not agree that a sustainable transport network is in place in Berkhamsted.

The following abstracts from the site assessments show a common theme –

- the distance from the town centre,
- the gradient serving to discourage walking or cycling,
- absence of alternative public

Also their proximity to the A41 - its ambient and peak noise levels may have an adverse effect on Health and Wellbeing to residents unless effective mitigation measures are adopted.

The Attachment with this reply suggests that transport routes should be defined from the outset to encourage residents to use public transport in preference to private vehicles.

QUESTION: Sustainability Appraisal comment	<p>Having read the Sustainability Appraisal, it seems, surprisingly, that it is in fact absolutely necessary to state the obvious. Dacorum declared a Climate Emergency in July 2019. All new buildings need to be carbon neutral by 2025. The proposed housing figures (see above) will make this target completely unachievable. The proposed loss of green belt land will reduce mitigating carbon dioxide capture. It is hard to comprehend how the Borough can declare a Climate Emergency and then propose a Plan that can only make matters much worse.</p> <p>Our chalk streams are something to treasure providing unique and irreplaceable ecosystems. They are already in trouble – the River Gade ran dry in 2019. The 28% more water that will be required for the extra population anticipated by the Plan will have to come from somewhere and where is not clear in the Plan.</p>

QUESTION: Sustainability Appraisal comment

Table 4-1: Key sustainability Issues and Opportunities

Biodiversity, including flora and fauna, and Geodiversity. This is a laudable reflection of some issues; however, it identifies conflicts and issues where the natural environment will be compromised by development - directly or indirectly. This includes the declining rural infrastructure of farming which is recognised within the plan as influencing the majority of the countryside itself. It also avoids providing examples of direct loss of sites.

Similar issues are recognised in respect of landscape – loss of traditional farming practices including livestock grazing, climate change, light pollution and loss of tranquillity.

Biodiversity is incompatible with the proposed growth (Fig 4-1. It is uncertain for landscape – which is clearly wrong, as the direct urbanisation of currently large and visible rural landscapes around Hemel and Tring in particular are not compatible with their maintenance. It therefore lacks the integrity to present a wholly reliable view of the plan’s ecological sustainability. In these respects, the appraisal demonstrates the failure of the plan to achieve sustainable development, in contrast to its views that the Compatibility Matrix indicates the Local Plan Strategic Objectives are compatible with the SA/SEA objectives. They are clearly not for key areas.

No sites in Hemel are recognised as having a negative impact on biodiversity in Table 5-6. Dunsley Farm is not recognised as having a damaging impact on biodiversity in Table 5-6. Indeed, no significant effects are identified in respect of the SA objective to protect, maintain and enhance biodiversity and geodiversity at all levels. Given the acknowledged impacts of pressure resulting from growth, and the direct and indirect impacts on sites, these assessments are clearly wrong and wholly unreliable. The same applies to conserve and enhance landscape character.

The same inconsistencies are reflected in Table 6-1 in respect of the delivery strategies. Whilst policies themselves for biodiversity are recognised as positive, this misses the actual impact development will have on the environment for which little or no constructive measures are proposed or if so, are inconsistent and wholly aspirational, such as SANGS.

The conflicts between policies and site impacts are not recognised; ‘uncertain effects’ are not at all uncertain and so have not been adequately considered. They conflict with later views on the need for SANGS to prevent pressure on the SAC and other SSSIs (6.7). Consequently, I do not consider the findings to be reliable without further work to demonstrate otherwise. Similar comments can be made to landscape, which whilst limited to certain areas, will have a major and significant damaging impact where development is proposed, affecting the setting of the new town and two supposed Market Towns. This hardly achieves a Garden City vision. Reliance on protecting the AONB is insufficient to achieve a sustainable approach, or recognition of the extent noise pollution can affect wildlife is irrelevant when sites are being

lost, damaged and the means to manage them declining. An HRA is being prepared and may highlight some of these issues further.

Whilst it states the Local Plan includes a series of policies aimed at protecting and enhancing the environment and public realm and helping towards achievement of associated Local Plan objectives, more work is needed to address the damaging impacts of the plan before it should be considered as delivering sustainable development.

Agent Organisation

Yes / No Yes

* Yes

* No

QUESTION: Sustainability Appraisal comment Markyate Parish Council appreciates that the Sustainability Appraisal (SA) and Strategic Environmental Assessment (SEA) are required by law and are prepared by independent consultants TRL Ltd, appointed by DBC. It may be a common practice, but the colour codings used and the comparisons drawn are not easy reading, but throughout the studies, London Road, Markyate site is ranked as ‘Very unsustainable .. likely to have significant adverse impacts’ in reducing flood risk.

The Sustainability reports take a broad view of the policies and these are largely devoted to Hemel Hempstead.

Ref 5.5.2 page 45

When considering Markyate, the Sustainability Appraisal correctly records that the allocation of the site South of London Road will

‘ have a potential significant negative effect on objective SA3 –Flood Risk. An alternative site - land at Cotton Spring Farm would require access from South of London Road, and thus requiring the same bridge over the River Ver. In considering the outcomes of the appraisal of South of London Road, the Council has had regard to positive effects

identified against seven of the objectives, and believe that these benefits that the allocation will bring, outweigh the negatives'

The Parish Council assume that the land at Cotton Spring Farm is the land behind Peggys Field, which had previously been proposed by developers.

The Parish Council accepts that the Sustainability Appraisal had looked carefully at the London Road site.

Ref Appendix D Ref SP28

Ref Appendix E6

The detailed studies in the appendices also pick up that effect on water quality and quantity from developing the site Mk01, off London Road is uncertain due to the proximity of the site to the River Ver and the potential for adverse effects from run-off.

With regard to all Markyate sites, the Strategic Appraisal appendices find that the village is poorly served by public transport which could result in increased car use for accessing facilities and services outside of the village, and that the proximity to the A5183 which may be a source of noise pollution. The Parish Council would also add air pollution.

With the two central sites the appendices also note that the development of this site would result in the loss of a small existing employment area.

Overall, Markyate Parish Council accept that the Sustainability Reports have done a thorough job.

QUESTION: Sustainability Appraisal comment Whilst more than 60% of Dacorum is green belt, and there are other rural areas, there is no reference to how that land is going to be used to support local employment and sustainability objectives.

This is not land that is waiting to be built on. Mostly this is producing land providing employment in agriculture and leisure. There could be much more on the role of the rural areas to support sustainability objectives that could also help recognition that this is mostly land in productive use, providing food, employment and leisure opportunities. Once lost it is hard to recover. If there are more people, there is a greater need for clean water and food that rural areas provide.

We will run out of these resources, if we get things wrong in the near future. They could be identified, and real strategies developed to support the increase of biodiversity and carbon neutral food production for example.

Yes / No * Yes * No	Yes
QUESTION: Sustainability Appraisal comment	<p>As stated in the Sustainability Appraisal: <i>“any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects ... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”</i></p> <p>Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure</p> <p>There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.</p> <p>Biodiversity (SA Objective 1)</p> <p>Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.</p> <p>Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.</p> <p>Flood Risk (SA Objective 3)</p>

SA states it has found 'no predicted effects' against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021) [see attachment].

Greenhouse gas emissions (SA Objective 4)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats

Landscape & Townscape (SA Objective 9)

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment	<p>As stated in the Sustainability Appraisal: any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects and relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants</p> <p>Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure.</p> <p>There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.</p> <p>Biodiversity (SA Objective 1)</p> <p>Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.</p> <p>Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.</p> <p>Flood Risk (SA Objective 3)</p> <p>SA states it has found 'no predicted effects' against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture attached in appendix to Q6 answers, taken in January 2021).</p> <p>Greenhouse gas emissions (SA Objective 4)</p> <p>The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).</p>

Photo to support comments on Flood Risk (SA Objective 3) flooded land between Bulbourne Road and Station Road, in the largest area of proposed development in Tring. Picture taken January 2021.

[SEE ATTACHED PHOTO OF TRING SITE]

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 m2 of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites that neither encourage car use nor increase congestion;
- the creation of a robust electric transport network;
- planning that ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats.

Landscape & Townscape (SA Objective 9)

The SA and Plan cites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types, and sizes of home (a minimum of 35% to be affordable housing), however, 'affordable' needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will thus be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment	<p>The Sustainability Appraisal report lists the first 2 key objectives as follows:-</p> <ol style="list-style-type: none"> 1 To protect, maintain and enhance biodiversity and geodiversity at all <p>Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000 + more people and their cats and dogs into them, can not be done without damaging biodiversity.</p> <ol style="list-style-type: none"> 1 To protect, maintain and enhance water resources (including water quality and quantity)

DBC's own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already overextracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. That's another 7.5 million litres a day - minimum.

Development at the level proposed is simply not compatible with these 2 objectives.

With regards to renewable energy, although it is mentioned that these proposals would be 'positively welcomed', they should instead form part of the local plan in order to provide energy for the excessive amount of extra buildings. Large scale solar and/or wind farms as well as other technologies should be incorporated into the plan.

QUESTION: Sustainability Appraisal comment

I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a

particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would

clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as “East of Tring” fails to meet the efficient use of land objective and yet this isn’t carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment As outlined in previous replies to Question 1 and 2 development on the proposed scale is neither sustainable nor necessary.

The Sustainability Appraisal report lists the first 2 key objectives as follows:-

- 1 To protect, maintain and enhance biodiversity and geodiversity at all

Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000 + more people and their cats and dogs into them, can not be done without damaging biodiversity.

- 1 To protect, maintain and enhance water resources (including water quality and quantity) 6 Ways to Preserve Biodiversity
 - 1 Support local Regularly buying from small local farmers at stands or markets helps to keep finance in the local economy and supports agricultural efforts to conserve biodiversity. ...
 - 1 Save the bees! ...maintain the flowers, flora
 - 2 Plant local flowers, fruits and ...maintain the source
 - 3 Take shorter showers! ...with 16,000 new houses!!!
 - 4 Respect local ... A habitat meets all the environmental conditions an organism needs to survive. For an animal, that means everything it needs to find and gather food, select a mate, and successfully reproduce. For a plant, a good habitat must provide the right combination of light, air, water, and soil.
 - 5 Know the source! - a clip from the World Health Organization - ".....Threats to biodiversity and health

There is growing concern about the health consequences of biodiversity loss. Biodiversity changes affect ecosystem functioning and significant disruptions of ecosystems can result in life sustaining ecosystem... goods and services. Biodiversity loss also means that we are losing, before discovery, many of nature's chemicals and genes, of the kind that have already provided humankind with enormous health benefits.... "

QUESTION: Sustainability Appraisal comment	<p>Water - building more houses on a chalk aquifer which is already under strain from the use of ground water supply and climate change is unsustainable. The ecology of the chalk streams is of international significance. The Bulborne which has its source in Dudswell and flows through Northchurch has been affected by over extraction in recent years.</p> <p>Many residents already have problems with water pressure. This has worsened with the building of houses at Bearoc Park and is set to get worse.</p> <p>This impacts on the natural ecology of the stream. Without provision for increased water demand, or adequate sewerage, the plan is unsustainable.</p>

QUESTION: Sustainability Appraisal comment The Council notes at paragraph 7.5 that it has progressed the Draft Plan on the basis on a housing need calculation of 922 dwellings per annum (dpa), which uses the method set out within the Government consultation as part of the Planning Reform White Paper (Autumn 2020). The Council acknowledges that there are uncertainties over using this figure and that there may be further changes set out by the Government and that it will be kept under review.

On 16 December 2020, the Government confirmed that councils should use an updated method which takes the original standard method and adds a 35% uplift for boroughs which contain the top 20 largest cities and urban areas (Planning Practice Guidance (PPG) paragraph reference ID: 2a- 004-20201216). This means that the housing need figure for Dacorum will revert back to 1,023dpa:

- The increase from 922dpa to 1,023dpa results in a total requirement of 18,414 homes across the Plan
- This is an increase of 1,818 homes above the 16,596 figure set out within the Draft At present, the Draft Plan contains a supply of 16,899 homes over the Plan Period, only marginally above the DBC's need when using the 922dpa figure.

As such, the DBC will need to update the Plan and find additional sources of housing supply in order to accommodate the higher level of need.

DBC will also need to update its Sustainability Appraisal. Currently, Options A to D are based on a housing target of 922dpa and only Option E considers a higher target of 1,100dpa. Option E does not specify a particular spatial strategy, so this will need to be addressed before the publication of the Regulation 19 Local Plan.

National guidance requires DBC to meet this need in full. There is a historic undersupply of housing in the area and the Council is currently unable to demonstrate a five-year supply of land for housing.

WSP understand that the latest calculation is that DBC can only demonstrate 2.8 years of housing land supply¹. This housing land supply calculation is based on the current housing target of 403dpa. With the emerging housing need of 1,023dpa set to increase this target by over 150%, the Council's housing land supply will fall to an even more critical level.

The 2020 Housing Delivery Test results, published on 19 January 2021, show that there has been a big reduction in housing delivery in DBC. The 2019 results showed that the Council was delivering 138% against its housing requirement but this dropped by 49% to 89% in the 2020 results. We understand that this means that the Council will now have to prepare an Action Plan to show how it will deliver the housing it needs.

Last year, DBC delivered just 522 homes against a target of 938dpa. This target was temporarily reduced by the Government from 1,023dpa, with a month's worth of demand being taken off due to the COVID pandemic. The next results will be based on a requirement of 1,023dpa and will require the Council to substantially increase housing delivery in order to avoid being hit with the requirement to add a 20% buffer to its housing target or face the most severe penalty, the "presumption in favour of sustainable development".

Further, affordability within DBC has worsened significantly over the last 10 years. The ratio of median house price earnings to median gross annual workplace-based earnings has gone up from 7.88 in 2009 to 12.21 in 2019, an increase of nearly 55%².

The issue of worsening affordability shows an acute need for housing placing greater emphasis on the council to exceed its housing requirement. As such, the Council should amend the Plan in order to meet in excess of 18,414 homes over the specified period.

QUESTION: Sustainability Appraisal comment	Pollution will drastically increase due to increased car use. There will a strain on Water, waste, utilities, council services and local bus and rail networks due to a 30% population increase.

Current road quality in Berkhamsted is appalling enough without the increased traffic.

'Rat runs' will be used even more frequently - these roads tend to have cars parked on both sides due to on street parking for most residents. These will become even more congested and dangerous for children and elderly pedestrians.

QUESTION: Sustainability Appraisal comment

1) There would seem to be a notiable absense of and estimates of the construction emissions. It is critical the the emission from construction are included in the year that they are emitted, not spread over the life time of the building, as they are very significant. It is the global emission over the next few decades that determine whether humanity manages to limit climate change to 1.5C, and the lift time of the buildings built over the new few decades will be hundereds of years. So if objective is to limit global tempreture rise the emission created by the building of a house in dacorum (which are mostly embeded in construction materials) needs to be include in dacorums carbon budget for the year the house was built (as that is when the emission happen). Spreading emission over a hundared years is just creative accounting to avoid acknowledge the impact of construction, or allow construction that doesn't fit within carbon budgets.

2) "Low Carbon" is both a meaningless term (how low is low) and out of date with goverment policy. The goverment is committed to zero carbon so Local Plan needs to deliver a Zero carbon dacorum, not a 'low carbon' dacorum.

3) As I have already flagged the big challange of getting to zero carbon is about retorfiting existing buildings. it is therefore key that all new housing allow zero carbon lifestyles on day one. That means EV charger per parking space, and a much lower ration of parking spaces to occupants than currently. It means no natural gas on the site. It means PV built in on all south facing roofs and maximising south facing roof space. It means grey water recycling built in. Non of these are currently stipulation for all new development which is constrictary to the council climate emergancy declaration.

QUESTION: Sustainability Appraisal comment	<p>As stated in the Sustainability Appraisal: <i>“any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects</i></p> <p><i>... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”</i></p> <p>Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure</p> <p>There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.</p> <p>Biodiversity (SA Objective 1)</p> <p>Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.</p> <p>Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.</p> <p>Flood Risk (SA Objective 3)</p> <p>SA states it has found ‘no predicted effects’ against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021).</p> <p>[PLEASE SEE PHOTO OF SITE IN TRING]</p>

Greenhouse gas emissions (SA Objective 4)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats.

Landscape & Townscape (SA Objective 9)

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet</p>

this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment

I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion

into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment	<p>The Sustainability Appraisal report lists the first 2 key objectives as follows:-</p> <p>1 To protect, maintain and enhance biodiversity and geodiversity at all Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000+ more people and their cats and dogs into them, can not be done without damaging biodiversity. And putting a 10% net gain target on developers that will never be measured or achieved is just greenwash.</p> <p>1 To protect, maintain and enhance water resources (including water quality and quantity)</p> <p>Your own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already overextracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. Thats another 7.5 million litres a day - minimum. There will be no water left to measure quality. You will kill the river and all the wildlife and biodiversity that depends on it - how are your developers going to offset that in their 10% net gain calculations?</p> <p>Development at the level you propose is simply not compatible with these 2 objectives.</p> <p>As outlined in my replies to Question 1 and 2 development on the scale proposed is neither sustainable nor necessary.</p>

QUESTION: Sustainability Appraisal comment	<p>Throughout this document I have described why I disagree strongly with the developments in Tring in relation to sustainability. Conclusions are not backed up by sufficient evidence or detail/commitment given to mitigating strategies.</p> <p>The plan identifies that a key sustainability issue is that <i>'Ashridge SAC/SSSI, Tring Park, Tring Reservoirs and the Grand Union Canal are all reported to be experiencing visitor pressures. As the urban population increases, pressures on access to the countryside and these key attractions will increase.'</i> My experience is that the pandemic has increased the use of these areas considerably and that this use is likely to continue as the benefits for peoples physical and mental</p>

wellbeing are clear. I believe that the impact of local traffic increase, pollution and visitor numbers would have a very negative impact on these sites and that of Tring Park SSSI. The impact of these should be considered alongside housing need. Government policy seems clear that councils have responsibilities for assessing housing need alongside local environmental concerns rather than the former trumping the latter. The planned provision of public park of around 20 hectares would in no way compensate for the loss of open land/countryside on Green belt land, and would further impact on the above areas.

I also have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. QUESTION: Sustainability Appraisal comment	The Sustainability Appraisal report lists the first 2 key objectives as follows:-

1 To protect, maintain and enhance biodiversity and geodiversity at all levels.

Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000+ more people and their cats and dogs into them, can not be done without damaging biodiversity.

1 To protect, maintain and enhance water resources (including water quality and quantity)

DBC's own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already overextracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. That's another 7.5 million litres a day - minimum.

Development at the level proposed is simply not compatible with these 2 objectives.

With regards to renewable energy, although it is mentioned that these proposals would be 'positively welcomed', they should instead form part of the local plan in order to provide energy for the excessive amount of extra buildings. Large scale solar and/or wind farms as well as other technologies should be incorporated into the plan.

QUESTION: Sustainability Appraisal comment	Chalk streams: Our chalk streams are sadly depleted, over-extracted. The River Gade ran dry in 2019. They are irreplaceable once gone and an important part of our environment. We are very fortunate to have them in this area – they and their ecosystems are precious. It is not clear how 28% more water for the extra population foreseen in this Plan will be obtained, or from where, as the chalk streams simply cannot provide it.

QUESTION: Sustainability Appraisal comment	<p>As stated in the Sustainability Appraisal: “any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects ... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”</p> <p>Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure.</p> <p>There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.</p> <p>Biodiversity (SA Objective 1)</p> <p>Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.</p> <p>Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.</p> <p>Flood Risk (SA Objective 3)</p> <p>SA states it has found ‘no predicted effects’ against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see photo in Appendix).</p>

Greenhouse gas emissions (SA Objective 4)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

(See extra sheet of answers supplied)

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats.

Landscape & Townscape (SA Objective 9)

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring in terms of design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment	I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has

brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment I do have concerns for the effects of the scale of development proposed on the availability of water supplies, the continued/ increasing extraction of water from aquifers, and the possible inadvertent pollution of water supplies caused as a result of development (clause 6.4.3 of the Sustainability Appraisal).

I also disagree with the conclusion in clause 6.4.11 that "the predicted impacts of the plan should have positive cumulative impacts against the objective to improve the health and wellbeing of the local population" which would be ".....achieved

through policies which support the improvements to housing, healthcare, education, the environment and facilities for leisure and recreation”. I have seen no evidence to support the view that such improvements would be realised by the proposals set out in the Draft Local Plan.

QUESTION: Sustainability Appraisal comment I do have concerns for the effects of the scale of development proposed on the availability of water supplies, the continued/ increasing extraction of water from aquifers, and the possible inadvertent pollution of water supplies caused as a result of development (clause 6.4.3 of the Sustainability Appraisal).

I also disagree with the conclusion in clause 6.4.11 that “the predicted impacts of the plan should have positive cumulative impacts against the objective to improve the health and wellbeing of the local population” which would be “.....achieved through policies which support the improvements to housing, healthcare, education, the environment and facilities for leisure and recreation”. I have seen no evidence to support the view that such improvements would be realised by the proposals set out in the Draft Local Plan.

QUESTION: Sustainability Appraisal comment	<p>The Sustainability Appraisal report lists the first 2 key objectives as follows:-</p> <p>1 To protect, maintain and enhance biodiversity and geodiversity at all</p> <p>Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000+ more people and their cats and dogs into them, can not be done without damaging biodiversity. And putting a 10% net gain target on developers that will never be measured or achieved is just greenwash.</p> <p>1 To protect, maintain and enhance water resources (including water quality and quantity)</p> <p>Your own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already overextracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. Thats another 7.5 million litres a day - minimum. There will be no water left to measure quality. You will kill the river and all the wildlife and biodiversity that depends on it - how are your developers going to offset that in their 10% net gain calculations?</p> <p>Development at the level you propose is simply not compatible with these 2 objectives.</p>

QUESTION: Sustainability Appraisal comment	As noted above, pedestrian and cycle routes to and from Berkhamsted town centre from the ridge area continue to be unsuitable and hazardous. In particular, pavements are narrow on both Shootersway (between the water tower and Cross Oak Road) and along Kings Road, and there is no pavement along sections of Cross Oak Road. Combined with the additional car and commercial traffic that will arise, further development of the ridge area of Berkhamsted would make it hazardous for pedestrians especially families with young children. There is no obvious plan in the draft Local Plan to address transport to and from the ridge area. Transport routes should be defined from the outset to encourage residents to use public transport in preference to private vehicles. As noted above, a previous petition for a shuttle bus service to and from the town centre secured a great deal of local support and this should be revisited as part of a more holistic approach to further development in the town.

QUESTION: Sustainability Appraisal comment	<p>I agree with Dacorum Green Party's comments on Sustainability. Biodiversity (SA Objective 1)</p> <p>We must achieve a genuine net gain in biodiversity. This can be achieved by rewilding and planting trees protected for future generations. We call for every 1 acre of green belt that is developed a further 2 acres are rewilded with public access. We call for Biodiversity and mandatory commitments to incorporate wildlife and wildlife corridors into every new development.</p> <p>Greenhouse gas emissions (SA Objective 4)</p> <p>This has been extensively covered in previous comments. We call for every new property to be net zero including Scope 3. It must be mandatory that every home is dual aspect and well insulated. Solar panels and heat pumps must be mandatory where it can be proved they will be efficient. The replanting of new woodland as suggested above could be used to offset carbon.</p> <p>Air Quality (SA Objective 5)</p> <p>Due to its topography air pollution in central Berkhamsted can be very poor. We must incorporate electrical vehicle charging points in every new home as a mandatory requirement to encourage electric vehicles along with solar energy to power them. We must invest in safe cycling routes and electric public transport. Tring has 2 electric charging points currently which is completely inadequate for its current population. Electric Vehicle charging points must be incorporated into existing Victorian housing stock in the towns to help mitigate any increase in air pollution by additional homes.</p>

QUESTION: Sustainability Appraisal comment	Water - building more houses on a chalk aquifer which is already under strain from the use of ground water supply and climate change is unsustainable. The ecology of the chalk streams is of international significance. The Bulborne which has its source in Dudswell and flows through Northchurch has been affected by over extraction in recent years. Many residents already have problems with water pressure. This has worsened with the building of houses at Bearoc Park and is set to get worse. This impacts on the natural ecology of the stream. Without provision for increased water demand, or adequate sewerage, the plan is unsustainable.

QUESTION: Sustainability Appraisal comment	6.1 The Plan is not compatible the objectives of the Sustainability Appraisal (SA) Dacorum's Local Plan Interim SA Report November 2020 4.5 (page 24) assesses the compatibility between SA Objectives and Local Plan Objectives. In relation to Local Plan Objective: "Delivering Dacorum's future with homes for everyone", it concludes:

“This objective is potentially incompatible with a number of the SA objectives:

- The level of housing development required in the Borough will require development of greenfield land. Development of greenfield land is not compatible with biodiversity (SA1) due to landtake, potential habitat fragmentation and urban pollution issues. Development on greenfield land would also result in soil sealing (SA6).
- Providing new homes in the Borough will put direct pressure on water resources (SA2) which are already identified as ‘over-abstracted’.
- Housing development will result in increases in greenhouse gas emissions from new housing and associated activities (SA4). It will also contribute to background emissions through an increase in the number of vehicles on the road thereby reducing air quality (SA5). The objective also has uncertain compatibilities with a number of the SA objectives:
- Parts of the Borough lie within areas of flood risk and there is the potential for new housing sites to lie within these zones (SA3).
- Housing development on greenfield sites is potentially incompatible with the SA objectives on historic environment (SA8), and landscape / townscape (SA9).”

Similarly, the report details potential incompatibilities between SA objectives and two Local Plan Objectives: ‘Generating a vibrant economy with opportunities for all’, and ‘Enabling the delivery of infrastructure’.

The Local Plan should remove the word “potentially” and acknowledge that Local Plan Objectives are not compatible with sustainability.

The proposed developments contain insufficient social housing to meet local needs. For example, a semi-detached house in the Bearroc 2 site, adjacent to the new Northchurch developments, is priced between £500,000 and £800,000. This is beyond the means of people in Dacorum who need housing.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would</p> <p>clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment	<p>As stated in the Sustainability Appraisal: <i>“any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects ... relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants”</i></p> <p>Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure</p> <p>There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.</p> <p>Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.</p> <p>Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.</p> <p>SA states it has found ‘no predicted effects’ against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road, floods regularly (please see picture below taken in January 2021).</p>

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of, design and site selection.

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, affordable needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

Yes / No * Yes * No	No
QUESTION: Sustainability Appraisal comment	<ul style="list-style-type: none"> The sites proposed for development in this draft Local Plan have been evaluated and categorised based on ‘suitability, availability and achievability’ in the <i>Site Assessment Study for Dacorum Borough Council</i> dated January 2020 and compiled by consultants They state: <p><i>“This site assessment study comprises an independent, impartial and technically- focussed appraisal of the suitability, availability and achievability of 144 sites submitted to Dacorum Borough Council at various points in recent years for residential or employment development.”</i> (my emphasis)</p> <p>This makes it clear that the site assessment study does not assess where development would strategically be best located for the sustainable development of Dacorum, but simply reactively evaluates only that land which has been proposed by land-owners or developers.</p>

This means that the best and most sustainable locations for development in Dacorum may not have been considered at all, condemning the future growth of Dacorum to be driven primarily by developers' available land, even if this is the least suitable location from other perspectives such as transport, infrastructure and sustainability.

This approach is fundamentally wrong for the strategic importance of this Local Plan. Surely a Plan which will determine the course and location of development in the borough over a sixteen year period, and which sets the pattern of settlement in the borough for all future generations, should be strategic in its vision and proposals. This draft Local Plan is not – it sets the bar at the lowest level possible in terms of settlement strategy, by simply adopting development locations that are currently proposed by developers or land-owners. Our children and their children are consequently condemned to live in the wrong place by this plan. Wrong because it substantially violates the green belt which can never be recovered, and because the increase in road use that will result from locating development furthest from existing transport nodes will cause an increase in pollution and greenhouse gas emissions.

- One of the objectives of the site assessment study states:

*“Although this study is not a Strategic Housing Land Availability Assessment (SHLAA) in the sense that there was no need to carry out another Call for Sites and **its scope is limited to land outside existing settlement boundaries**, it shares key objectives with the SHLAA process and **could be considered a rural counterpart to the urban SHLAA work**. The most obvious similarity is that, like a SHLAA, the key study objective is to determine the suitability, availability and achievability **of all sites**.”* (my emphasis)

It is surely not acceptable that the assessment process limits its scope to land outside existing settlement boundaries. Why should the growth of urban Dacorum be focussed on rural areas? Saying that a study objective is ‘*to determine the suitability, availability and achievability of all sites*’ is simply not true if the study only considers sites presented by developers.

- The Site assessment Study states:

“The Council can be confident that greenfield sites are most likely to be deliverable and have capacity to bear developer contributions over and above CIL. The viability of brownfield sites is less certain, particularly in lower value areas.”

This shocking statement of bias towards using greenfield land is contrary to government policy that development should preferably be focussed on brownfield land and recent statements that the Green Belt should be protected.

Furthermore it guides growth and development towards peripheral locations which by definition are less sustainable, and is an unacceptable precursor to the Local Plan proposing to wipe out 746 hectares of Green Belt land.

- It is important to review and understand the previous studies that should inform this draft Local One such study is the Dacorum Borough Council Settlement Hierarchy Study, published in October 2017. This document states in section 1.2 of the Introduction:

“The purpose of a settlement hierarchy is to guide development so that it is:

- *provided in areas with access to the widest range of essential services and facilities*

where the need to travel is minimized;

- *distributed in a way that corresponds with the role and service provision of the different settlements and the **ability of their infrastructure to cope with additional growth**;*
- *distributed in such a way that where facilities are not available within individual settlements, they are easily accessible at higher order settlements by a choice of transport modes (**that do not rely solely on the private car**).*” (My emphasis)

It is evident that this logical statement of purpose is not followed in the draft Local Plan. The largest proposed development sites (HH01 and HH02 – the location of the so- called Hemel Garden Community) are not in locations with easy access to essential services, and do not minimize the need for travel. There is no existing infrastructure nor existing services to cope with this additional growth. Existing travel and community infrastructure is nowhere near – there is no existing choice of transport modes to access these and people will need to use private vehicles.

- The Settlement Hierarchy Study assesses Hemel Hempstead as one location in ranking the hierarchy and concludes it is a good place for further development . This is unsound

– Hemel is simply too large to assess in this way. If the proposed Hemel Garden Community sites are split out and evaluated against the criteria used in the audit of accessibility (Section 4.4) in this study, they would rate poorly. For example the only ‘higher order service’ reasonably close is a supermarket (although arguably still not

walking distance); there are not at least six key services existing in the area; and the sites would rate as ‘limited’ on the accessibility audit given that they are more than 5km from the nearest railway service. In fact, if Picott’s End had been

ranked in this hierarchy (it wasn't, probably because it is too small, but it should have been as it is the closest existing settlement to the proposed new Hemel Garden Communities sites) it would have ranked as 'Low' to 'Poor'.

- Much of the work on the Local Plan would have been carried out before the massive impact of the Coronavirus pandemic was understood. It is likely that many changes brought about by the pandemic will become long-lasting and embedded in the way society works. The migration away from office working could result in substantial town centre employment locations becoming available for residential use in substantially more sustainable locations than peripheral Green Belt

As noted, the extent of this impact was unknown while the Plan was being drafted. However given the generational impact the Plan will have on the future of Dacorum, it would be sensible to pause and review town centre opportunities that have emerged or are likely to emerge following the impacts of the pandemic. Ploughing on with proposals to develop in rural or peripheral areas on greenfield land where there are no services, transport, or social infrastructure in the light of changes emerging from the pandemic is simply not sensible. It would place people furthest from existing infrastructure, and will not take advantage of new town centre locations that will come available, meaning these may remain derelict.

- The Site Assessment Study includes as section 3 a "Policy and Evidence Base Review". The key findings of this review are summarised as follows:

"Growth should be sited to ensure the following outcomes:

- *Development that is environmentally, socially and economically sustainable;*
- *A mixture of differently sized sites to meet a range of development needs;*
- *Prioritisation of development on brownfield rather than greenfield land, and avoidance of isolated greenfield development in the countryside except in exceptional circumstances;*
- *Prioritisation of growth according to the defined settlement hierarchy;*

- *Avoidance of key constraints identified in the evidence base including but not limited to Green Belt land, heritage and environmental designations, areas of high landscape sensitivity, areas of high agricultural quality and areas of high flood risk; where this is not possible, or where other criteria combine to indicate development is more suitable, mitigation of negative effects.*
- *Ensuring areas of growth are sufficiently supported by appropriate services and infrastructure including transport, utilities, community and green infrastructure, a sufficient retail offer and jobs.*
- *Reduction of the need to travel and maximise use of sustainable modes of transport.”*

When considering the largest site proposed for development in the Local Plan, namely the Green Belt area to the north of Hemel Hempstead (the so-called ‘Hemel Garden Community’) it is noted that it does not meet national and local policy as a development site in each of the aspects above highlighted in yellow.

- I note that a further land availability assessment document has been published: this is the *Strategic Housing Land Availability Assessment – Addendum to the AECOM Site Assessment Study* published by Dacorum Borough Council and dated November The document states:

“This addendum reviews the suitability of additional sites put to the Council since the completion of the Site Assessment Study conducted by AECOM in January 2020.”

Again this addendum is therefore not a strategic land assessment. It simply evaluates, using the same criteria as in the original AECOM report, additional sites that have been put to Dacorum since the AECOM study.

QUESTION: Sustainability Appraisal comment	I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as “East of Tring” fails to meet the efficient use of land objective and yet this isn’t carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment	<p>WATER: While the plan acknowledges that our local water resources are under extreme pressure, from the use of ground water for water supply and from climate change, it does not go far enough to protect the globally-rare Chalk streams in Dacorum by limiting the scale of house building.</p> <p>The plan proposes an increase in our population of up to 28% which is incompatible with the Council's commitment (2019 motion in Full council) to protect these important ecosystems, particularly when Policy DM33 of the Local Plan states the objective of avoiding "the need to abstract water from the ground, in particular from the Rivers Ver, Gade and Bulbourne catchments".</p> <p>The details on the proposed sites for development, many of which are in the valleys of these chalk streams, do not provide any detail on how the negative impacts on our chalk streams will be mitigated against.</p> <p>CLIMATE: The plan does yet provide sufficient details to indicate how carbon emissions from the building and use of new homes will align with the government 2050 net zero target. Given the scale of building proposed, and even if this is significantly reduced, there is a clear conflict between plans for more building, significantly more Co2-producing population, and Co2 targets. The Future Homes Standard will from 2025 require an even higher standard of carbon emissions reduction, with fossil fuel burners banned in new homes from this point, with a carbon emissions reduction of 75 to 80% compared to the current standard. Government has also advised, that to ensure industry is ready to meet the new standards by 2025, new homes will be expected to produce 31% lower carbon emissions from 2021.</p> <p>The carbon cost of removing land from Green belt is also significant. Soil is a large absorber of CO2, and when it is dug up and built over much of this is released, not to mention the lost future absorption. Sustainable development in Dacorum needs to be based on a clear understanding of baseline CO2 emissions in the Borough, including acknowledgment in the Local Plan of the carbon cost of removing land from greenbelt. The Borough and developers need to calculate the carbon loss and increased emissions of:</p> <ul style="list-style-type: none"> • Removing any land from green belt or green field. • Building the houses, including carbon cost of materials involved and cost of transporting those materials. • Using those houses , eg heating, and providing electricity for their occupants. • travelling to and from those houses.

- Expected carbon cost of dismantling and disposal of the assets at the end of life (this will encourage developers to use recyclable materials).

TRANSPORT & INFRASTRUCTURE: Dacorum and Hertfordshire does not have the infrastructure to reduce car dependency. Apart from access to London by train, the Local Plan does not include any infrastructure or investment to avoid a massive increase in car usage and volumes of traffic on roads. Many new developments in the plan are far from the train stations in Dacorum, and there is no explanation provided as to how the people who live in these homes will travel to and from work or the nearest station.

QUESTION: Sustainability Appraisal comment DBC ignores the post-pandemic effects. It grossly underestimates windfall developments, it does not assess the use of brownfield sites or the in-filing that could easily take place in Hemel Hempstead where there are large areas of unused mown grass (not environmentally beneficial – no meadow flowers etc.) and poorly maintained public open spaces that are scarcely used. All of these could provide excellent affordable terraced housing without encroaching on the Green Belt and make proper use of existing transport and civic facilities.

QUESTION: Sustainability Appraisal comment	<p>LCR and NR generally support the scoring used to assess the sustainability of each potential draft allocation, however, wishes to make specific comments on the following score for Site. Where no comment has been provided, LCR agree with the score given:</p> <ul style="list-style-type: none"> • Biodiversity: Ecological surveys are in the process of being commissioned and will be prepared to support any forthcoming planning application for the Site. Once these assessments have taken place, we consider that we will be able to provide more clarity on this element of the • Landscape/Townscape: The proposed development has been designed so that it contributes positively to the surrounding landscape and townscape. We therefore consider that the score should be at least '<i>The option is likely to have a positive effect which is not significant</i>'. • Community Cohesion: The proposed development has been considered by the Community Review Panel, and links to the immediate surroundings and the wider community in Hemel Hempstead are a priority for the proposed development. We therefore consider that the score should be at least '<i>The option is likely to have a positive effect which is not significant</i>'. • Housing: The draft Allocation represents a highly sustainable brownfield Site, which in line with National Planning Policy should be prioritised for development. The highly sustainable nature of the Site provides an opportunity for high quality, high density development and therefore is able to contribute significantly to housing delivery within Hemel Hempstead. We therefore consider that the score should be '<i>The option is likely to have a significant positive effect</i>'. The increased site capacity <p>should be reflected within Appendix E of the Dacorum Local Plan (2020-2038) Emerging Strategy for Growth Interim Sustainability Appraisal Report Appendices.</p>

- **Employment and Skills:** The proposed development will create a significant level of local jobs, during construction and following completion. We therefore consider that the score should be *'The option is likely to have a significant positive effect'*.

<p>Yes / No * Yes * No</p>	
<p>QUESTION: Sustainability Appraisal comment</p>	<ul style="list-style-type: none"> • In respect of the Sustainability Appraisal process, Taylor Wimpey is generally satisfied with the overall approach taken which has concluded that Bk06 is one of the strongest performing sites in Berkhamsted. However, we consider that site specifics have not been appropriately taken into account, which has resulted in unfairly conservative scoring in some • For objective 1 biodiversity, the SA gives Bk06 a negative 'û' However, this does not take into account the currently de-graded nature of the site or the Green Infrastructure provision proposed by the Illustrative Masterplan, which incorporates significant new tree planting and creation of new habitats to deliver 10% net gain in biodiversity across the site. Furthermore, the scheme commits to providing a new country park. The site should therefore receive at least a neutral '?' score for this objective as a starting point, whilst recognising the biodiversity improvements which can be delivered at this site. • For objective 3 flood risk, a blank score is As the site is in flood zone 1 and at the lowest risk of flooding from all sources and is therefore sequentially preferable for residential development. As such, a positive 'ü' score should be given for this objective to recognise the potential for further improvements through the introduction of sustainable urban drainage systems. • In respect of objective 4 Climate Change, the SA provides a negative 'û' score by virtue of the site's distance from the town centre. However, this fails to recognise the opportunities for encouraging take up of sustainable modes of travel through good design and the creation of walkable neighbourhoods and the overall policy objectives of the emerging Local Plan to coordinate the development of West of Berkhamsted to provide a mix of land uses to serve the day-to-day needs of the community, reduce energy consumption and deliver a comprehensive green infrastructure network and biodiversity net On this basis, it is considered the site should have a neutral '?' score against this objective, with scope to improve upon this. • In terms of objective 8 historic environment and objective 9 landscape, the SA gives the site negative 'û' scores. As discussed above, a landscape-led and sensitive approach to heritage assets has been taken in the masterplanning of the Design principles can therefore be incorporated to successfully mitigate any heritage and landscape impact resulting from the development of the site. On this basis, it is considered the site should have a neutral '?' score for these two objectives.

QUESTION: Sustainability Appraisal comment The next iteration (Regulation 19) Sustainability Appraisal (SA) should also specific reference should be made to paragraph 32 of the NPPF:

“Local plans and spatial development strategies should be informed throughout their preparation by a sustainability appraisal that meets the relevant legal requirements. This should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). Significant adverse impacts on these objectives should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be proposed (or, where this is not possible, compensatory measures should be considered)”.

Our client notes that the Council’s SA acknowledges an OAN of 922 dpa but does not recommend growth Option E (Higher growth of 1,100 dwellings per annum) to be taken forward into the next stage (Regulation 19) of the new Local Plan despite this option being recognised as having potential to give rise to “significant positive effects on the SA13 – Housing”. Growth Option E makes provision for 1,100 dpa and therefore exceeds the current OAN and the Government’s new Standard Method requirement for 1,023 dpa.

It is noted Option E was discounted in the absence of evidence justifying the need for a higher-growth option and concern for potential significant negative effects in relation to SA Objectives SA6 – Soils and SA9 – Landscape. DBC should re-review their preferred growth option (Option Ci) to ensure new sites such as Land at 168-192 High Street, Berkhamsted can be allocated for either for residential-led mixed use or later-living housing to accommodate growth as per the Government’s new Standard Method. The Council need to assess whether the significant negative effects can be mitigated and on balance, whether the provision of additional growth and homes outweighs any associated harm in accordance with paragraph 32 of the NPPF. Moreover, it is noted that the current evidence base is being supplemented and this could help support a revised growth option.

Furthermore, it is essential that for the new Local plan to be found to be “positively prepared” and “justified” it will need to achieve sustainable development and assess all reasonable growth options in accordance with paragraph 35 of the NPPF.

QUESTION: Sustainability Appraisal comment

- There would seem to be a notable absence of and estimates of the construction emissions. It is critical the the emission from construction are included in the year that they are emitted, not spread over the life time of the building, as they are very significant. It is the global emission over the next few decades that determine whether humanity manages to limit climate change to 1.5C, and the life time of the buildings built over the next few decades will be hundreds of years. So if objective is to limit global temperature rise the emission created by the building of a house in dacorum (which are mostly embedded in construction materials) needs to be included in dacorum's carbon budget for the year the house was built (as that is when the emission happens). Spreading emission over a hundred years

is just creative accounting to avoid acknowledge the impact of construction, or allow construction that doesn't fit within carbon

- “Low Carbon” is both a meaningless term (how low is low) and out of date with goverment policy. The goverment is committed to zero carbon so Local Plan needs to deliver a Zero carbon dacorum, not a ‘low carbon’
- As I have already flagged the big challange of getting to zero carbon is about retorfitting existing it is therefore key that all new housing allow zero carbon lifestyles on day one. That means EV charger per parking space, and a much lower ration of parking spaces to occupants than currently. It means no natural gas on the site. It means PV built in on all south facing roofs and maximising south facing roof space. It means grey water recycling built in. Non of these are currently stipulation for all new development which is constrictary to the council climate emergancy declaration.

QUESTION: Sustainability Appraisal comment

The Sustainability Appraisal report lists the first 2 key objectives as follows:-

- 1 To protect, maintain and enhance biodiversity and geodiversity at all

Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000 + more people and their cats and dogs into them, can not be done without damaging biodiversity.

1 To protect, maintain and enhance water resources (including water quality and quantity)

DBC's own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already overextracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. That's another 7.5 million litres a day - minimum.

Development at the level proposed is simply not compatible with these 2 objectives.

With regards to renewable energy, although it is mentioned that these proposals would be 'positively welcomed', they should instead form part of the local plan in order to provide energy for the excessive amount of extra buildings. Large scale solar and/or wind farms as well as other technologies should be incorporated into the plan.

QUESTION: Sustainability Appraisal comment	Dacorum Local Plan Interim Sustainability Appraisal Report (November 2020) Some of the key sustainability issues and opportunities identified in the Sustainability Appraisal (SA) include a requirement for affordable housing in accessible locations. This opportunity was retained through SA framework objective 13: "Ensure that everyone has access to good quality housing that meets their needs". High quality rural housing would help to support the vitality of Flamstead.

Furthermore, the SA identified some incompatibilities between the Draft Local Plan and SA objectives, namely that parts of the borough are located in Flood Zones with potential housing sites identified within these. The two sites in question are not at risk from flooding.

Additionally, the SA states that “the level of housing development required in the Borough will require development of greenfield land. While the proposed site allocations in Flamstead lie within the greenbelt on greenfield sites, they do not lie on any environmental designations and benefit from access to public transport and a direct access to the M1 via Junction 9. Furthermore, while the sites would constitute land take they would support the council’s ambitions with regards to affordable housing.

The SA has assessed the housing provision based on 16,565 homes and does consider a higher housing target based on the Government’s revised housing assessment method. The SA therefore does not consider the further housing requirement resulting from the new method. Revisions to the SA in future should treat our clients sites as reasonable alternatives for future housing growth.

QUESTION: Sustainability Appraisal comment

I note in the Sustainability Appraisal for Tring that objectives for climate change, soils, landscape and Townscape are likely to have adverse impacts, albeit defined as ‘minor’.

- The new development proposed to the east of Tring is on agricultural land which is classified as the ‘best and most versatile’.
- Although some significant adverse effects have been identified. The Sustainability Appraisal states that policies aimed at protecting open spaces and limiting development in the countryside and on open land should help to preserve the natural environment and biodiversity.

I am therefore concerned about the appropriate level of assessment of environmental impact.

For Historic environment the consideration is uncertain.

- Tring has quite a rich and significant history and this can be seen and felt within the centre, and draws a lot of people for leisure and tourism. This should not be compromised

Whilst the intent to build developments which have facilities within their boundaries, (Is this a J

- Three developments will potentially lead to increased traffic on the confined centre of -Tring and its narrow High Street
- increasing air pollution.
- The cumulative impact of the three proposed developments in Tring has not been considered.

I note that at the Regulation 19 stage the SA Report will also provide details of the monitoring which will be required to monitor the significant environmental effects and wider sustainability effects of implementing the Local Plan. In an ideal world this would enable any unforeseen adverse effects to be identified at an early stage and to enable appropriate remedial actions.

- However, history illustrates when the wheels of development are in motion there is no going back. The need for proved rigorous impact assessment pre-implementation is imperative.

QUESTION: Sustainability Appraisal comment

I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment 7.0 This consultation includes an Interim Sustainability Appraisal (ISA) Report. It is acknowledged that the SA will continue to be updated as the Plan progresses. The SA identifies a total of 15 Framework Objectives across a variety of topic areas. These are generally supported and it is agreed that these are generally compatible with the Local Plan Strategic Objectives. It is noted that Local Plan Objective delivering Dacorum's future homes for everyone has some potential incompatibility with certain SA objectives however this is an important aspect of the Local Plan and some potential incompatibility may be addressed through suitable mitigation as proposals evolve.

7.1 Objective 6 make efficient use of land and protect soils (abbreviated to soils) should also ensure that allocated land is developed efficiently.

7.2 In terms of the spatial strategy, the SA clearly sets out the various options considered by the Council and the reasons for selecting Option Ci: Spread across the six main settlements (low growth at villages). This is reflected in the spatial strategy of the Plan set out at Policy SP2. Options A-D are all based on growth level of 922 dwellings per annum, Option E considered 1,100 dwellings per annum. As set out in Section Two of this representation, the growth level will need to

reflect the standard method figure of 1,023 as a minimum. Other factors including affordability and economic growth aspirations will need to be considered further to establish whether an additional allowance above the minimum is appropriate. However the spatial approach of concentrating growth at the six main settlements with low growth at villages is generally supported as it appropriately distributes growth to sustainable locations in line with SA Objective 11.

7.3 The SA assesses each site considered as being a reasonable alternative against the SA objectives using the same methodology from the 2017 SA for the Schedule of Site Appraisals. The SA assessment for New Mill is discussed further in Section 8.

7.4 The comments at 6.7 around mitigation being ‘built-in’ to the Plan through both strategic and detailed policies is generally supported. As proposals for specific sites evolve further detail will be provided regarding mitigation for specific allocations. This is discussed further in Section 8.

QUESTION: Sustainability Appraisal comment I have several specific concerns in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as East of Tring fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified. Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

Pollution and congestion impacts of increased traffic.

In addition to concerns over assessment method, the proposal also insufficiently engages with the sustainability implication of increased traffic in Tring (SA Objective 4). Government statistics state that 76% of households have access to a car with 32% having two or more vehicles (Department for Transport, 2016). The likelihood of the proposed houses in Tring being multiple car ownership properties increases significantly with the higher occupancy potential of the proposed houses, the additional space the developers will create for parking, and the income levels of those able to afford to live in the new properties.

This proposal lacks a full and accurate assessment of potential traffic impacts in Tring specifically – including pollution, congestion and noise. Tring already suffers from traffic congestion bottlenecks in key roads, and lack of walkable amenities and no cycle lanes will encourage the increased use of vehicles.

This plan will have serious implications on Dacorum's (and Tring's) ability to tackle the climate crisis and maintain sustainable levels of emissions.

QUESTION: Sustainability Appraisal comment	<p>The SA assesses each site considered as being a reasonable alternative against the SA objectives using the same methodology from the 2017 SA for the Schedule of Site Appraisals.</p> <p>The SA utilises a subjective, qualitative scoring system to assess the proposed site allocation against the fifteen objectives. The scoring system is reproduced below:</p> <p>Significance Assessment</p> <p>Description</p> <p>PP (DARK GREEN) The option is likely to have a significant positive effect.</p> <p>P (LIGHT GREEN) The option is likely to have a positive effect which is not significant.</p> <p>? (YELLOW) ? Uncertain – It is uncertain how or if the option impacts on the SA/SEA objective.</p> <p>- (WHITE) Neutral – The option is unlikely to impact on the SA/SEA objective.</p> <p>X (ORANGE) The option is likely to have a negative effect which is not significant.</p> <p>XX (RED) The option is likely to have a significant negative effect.</p> <p>SA Objective</p> <p>CY03 Watling Street Truck Stop</p> <p>SA</p> <p>Rep</p>

1

Biodiversity

The area around the existing truck stop is greenfield land and so there would therefore be loss or damage of some habitats from any expansion. However, there is a requirement to deliver new tree-planting and woodland copse on land to the east of the existing filling station. *The site offers significant opportunity for biodiversity enhancement, particularly on land the east of the access which is not proposed to be developed. The scale of enhancements will depend on the application proposals.*

ORANGE

LIGHT GREEN

2

Water

Development could cause adverse effects on the water quality of the Rive Ver. *As shown on the Masterplan, development would avoid the source protection zone and appropriate mitigation can be provided, in liaison with the Environment Agency.*

YELLOW

- WHITE

3

Flood Risk

Part of the site is in a Flood Risk Zones 2 and 3. New development will need to avoid and mitigate current and potential future increased flood risk.

ORANGE

- WHITE

The Masterplan demonstrates development can avoid and mitigate flood risk.

ORANGE

WHITE

4

Climate Change

No predicted effects.

- YELLOW

- WHITE

5

Air Quality

Increases in localised HGV movements which would result from the development could result in reductions in air quality in the vicinity of the truck stop. *It should be noted that the proposed use does not generate new HGV trips, it services the needs of existing users of the strategic road network. In addition, there will be air quality improvements elsewhere, where the HGVs are currently trying to park. The score should, therefore, be neutral.*

ORANGE

- WHITE

6

Soils

The expansion of the truck stop would take place on greenfield land, resulting in soil sealing. *The development platform will not take the entire site area leaving significant areas for landscape and ecological mitigation.*

ORANGE

ORANGE

7

Resource Efficiency

No predicted effects.

- WHITE

- WHITE

8

Historic Environment

New development could have adverse effects on the setting of the nearby Listed Building (Chequers). *This can be addressed as part of any future*

YELLOW

YELLOW

planning application.

YELLOW

YELLOW

9

Landscape/Townscape

The development would extend the existing truck stop into open countryside. *The proposed development is landscape-led and the Masterplan demonstrates how the site could come forward to minimise impact on the countryside. Specifically, the proposal will also improve the street frontage of Watling Street as part of the comprehensive redevelopment, which will provide a significant improvement to the appearance of the area.*

ORANGE

ORANGE

10

Health and Wellbeing

Increased HGV movements could result in noise disturbance issues for local residents. Improved welfare facilities for commercial drivers would have benefits against the wellbeing objective. *The benefits for drivers are agreed. The Masterplan shows how screening and careful location of development could mitigate noise impacts on nearby residents. Residents affected by the informal parking of HGVs will have less disturbance. The score should, therefore, be neutral.*

YELLOW

- WHITE

11

Sustainable locations

No predicted effects.

- WHITE

- WHITE

12

Community Cohesion

No predicted effects. *This may be true for the immediate area, however, residents and others affected by the informal parking of HGVs will have an improved quality of environment. The score should be changed to positive.*

- WHITE

LIGHT GREEN

13

Housing

No predicted effects.
 - WHITE
 - WHITE
 14
 Sustainable Prosperity
 Expansion of the truck stop should support the local economy. *The safe and efficient operation of the strategic road network is acknowledged to have economic benefits.*
 LIGHT GREEN
 LIGHT GREEN
 15
 Employment and Skills
 Expansion of the truck stop should provide additional employment opportunities. *Agreed.*
 LIGHT GREEN
 LIGHT GREEN
 The comments at 6.7 around mitigation being 'built-in' to the Plan through both strategic and detailed policies is generally supported. As proposals for specific sites evolve further detail will be provided regarding mitigation for specific allocations. This is discussed further in Section 6.

QUESTION: Sustainability Appraisal comment Too little emphasis on redeveloping Brownfield sites, & too much emphasis on development on green field sites.

Agree with the need for more housing and in particular affordable housing, BUT very concerned with the apparent search for very large developments to fulfill the quota in single shot, rather than intelligent use of smaller sustainable sites with managed impact on the local area.

For example, major development in Tring by the Cemetery with no additional infrastructure (schools, doctors, dentists, childcare/nurseries, drainage) planned. In this specific instance, the housing is being built, but none of the amenities above have had additional capacity added.

Additionally, the site north of the Long Marston Cricket Ground, excluded from the Strategic Plan, but included for consideration in the Local Plan Interim Sustainability Report, Appendix F, would cause a significant increase in flooding in Long Marston and Astrope, both of which already flood regularly.

Additionally, the suggestion that it add to the sustainability of services within Tring is wrong - these are already over stretched, and new services would need to be provided.

**QUESTION: Sustainability
Appraisal comment**

We have reviewed the evidence base that underpins the Council's development strategy for Berkhamsted and wish to make a number of comments in this regard and in particular with reference to our client's site. The Council have allocated 10 greenfield sites at Berkhamsted (BK01, BK03, BK04, BK05, BK06, BK07, BK08, BK09, BK10) which form the focus of our comments.

We have provided a tabulated summary of the Sustainability Appraisal dated November 2020 in respect of the greenfield site allocations at Berkhamsted. It is noted that, just like the proposed site, all the draft allocations identified are located within the Green Belt. As can be seen below sites BK03, BK04, BK05, BK08 and BK10 all score the same or worse than our client's site in terms of sustainability dependent on the category.

Table: summary of scoring of greenfield sites in the Council's Sustainability Appraisal.

Sustainable location

BK03, BK04, BK05, BK08 and BK10 are scored negatively for sustainable location alongside our client's site. Notwithstanding this an examination of the AECOM Report 'Berkhamsted and Tring Transport Strategy' forming part of

the Council's evidence base for the draft local plan identifies differences between the sites. Our client's site is identified as being within a 15–25-minute travel time by bus to the town centre where as BK05 and Bk08 are located in the 25–40 journey time band. In terms of access time to the town centre by bicycle the proposed site lies within the <10-minute journey time whilst Bk05, BK06 and BK08 all lie within the 10–20-minute travel time zone. In respect of travel time by foot the site lies within the 10–20-minute zone whilst Bk03 lies within the 20 to 30minutes zone and BK05, Bk06 and BK8 within the 30-40 minutes zone. In respect of distance to schools the proposed site lies closer to both a secondary school and primary school combined by comparison to BK05, BK06 and BK8.

It is therefore evident that the proposed site is more sustainably located than BK05, BK06 and BK8.

QUESTION: Sustainability Appraisal comment As explained above, the conclusions of the Interim Sustainability Appraisal Report - which note a number of key concerns around the existing infrastructure - have not been properly reflected in other parts of the Plan.

For example, while the Sustainability Appraisal correctly states: “*any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects [...] relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants*”, 110 many of the proposed development sites are not close to facilities and services or well connected by existing/planned transport infrastructure.

110 Interim Sustainability Appraisal Report, pp.29-30.

QUESTION: Sustainability Appraisal comment	<p>I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would</p> <p>clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.</p> <p>Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as "East of Tring" fails to meet the efficient use of land objective and yet this isn't carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.</p> <p>Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.</p>

QUESTION: Sustainability Appraisal comment	<p>Identification of / differentiation between sites</p> <p>As a general comment, greater care should be taken when determining what is a site, versus a collection of sites that are contiguous or in close proximity to each other.</p> <p>For example, two separate fields to the south of Northchurch, divided by Bell Lane, have been treated as a single site (Bk06). However, the character of these sites is quite different, and the degree of landscape susceptibility is therefore quite different. One of these fields (the larger of the two) extends high up the side of the valley towards the area of AONB to the south, and there is significant intervisibility with a particularly lovely area of the AONB to the north-east (Northchurch Common / the Ashridge Estate), across the Bulbourne valley. This field has a genuinely rural atmosphere and there is minimal existing development, most of which is well concealed from most parts of the field. The draft "Dacorum Borough Landscape Sensitivity Study" prepared by Arup accurately records that:</p> <p><i>"The high plateau of the [larger] parcel has much less development around it and most views feature the arable field and wooded surroundings with a high degree of separation, tranquillity and scenic quality. The north of the western field has some exposure to the development edge of Berkhamsted, but the level of screening reduces the impact and the area maintains a tranquil setting"</i> (page 64).</p> <p>By contrast, the smaller of the two fields is correctly described as being:</p>

“much more exposed to the development edge of Berkhamsted. The open, undulating agricultural land and long distance views provide good scenic quality, but there is an urbanising affect from the unscreened, short range views of garages and residential streets” (page 64).

Overall, the study concludes that overall, these fields have a moderate-high landscape susceptibility to development, but it is hard to avoid the conclusion that were the two fields to be assessed as separate sites, different ratings would be given. **It is entirely inappropriate to combine parcels of land with such different characteristics, as it can skew the outcome of sensitivity studies.**

Site references

As a further general comment, **greater care should be taken to ensure that a consistent nomenclature is used for the identification of sites that are under review.** For example, the site (in reality, two separate sites, that have been treated as one) Bk06 is labelled as Parcel 18 in the “Dacorum Borough Landscape Sensitivity Study”. This impedes cross-referencing. Arup should have been asked to amend the report to use the same site references as used elsewhere in the draft local plan / evidence base documents.

QUESTION: Sustainability Appraisal comment	<p>5.0 In respect of the Sustainability Appraisal (SA) process, Taylor Wimpey is generally satisfied with the overall approach taken which concludes that land at Homefield is one of the strongest performing sites in in the village. However, it is considered that site specifics have not been appropriately taken into account, which has resulted in unnecessarily conservative scoring in some areas.</p> <p>5.1 For objective 1 'biodiversity', the SA gives Homefield a negative 'û' scoring. This does not take into account the strong opportunities that exist to deliver a net gain in biodiversity and ecological enhancements given it's current degraded state. The site should therefore receive at least a neutral '?' score for this objective. This scoring would also then be consistent with the biodiversity score for Fox Meadow, which has a similar biodiversity situation but receives an SA score of '?' for this objective.</p> <p>5.2 In terms of objective 9 'landscape', the SA gives the site a negative 'û' score. However, as discussed above, the site is well enclosed with a good level of boundary screening that can be further enhanced and overall sensitivity of the site is assessed by Dacorum to be low given its weak relationship with the wider countryside and degraded character. Furthermore, the proposed provision of open space within the site can be designed through appropriate masterplanning to further successfully mitigate any landscape impact resulting from the development of the site. On this basis, we consider the site should have as a minimum a neutral '?' score and potentially a positive 'ü' score for this objective.</p>

**QUESTION: Sustainability
Appraisal comment**

Section 12(2a) of the Environmental Assessment of Plans and Programmes Regulations 2004 requires that the Sustainability Appraisal (SA) identifies, describes, and evaluates the likely significant effects of reasonable alternatives. Section 19 of the Act relates to the Preparation of Local Development Documents. Section 19(5) requires that during this process an appraisal of the sustainability of the proposals must be undertaken.

This is confirmed in the PPG (11-001) which states inter alia:

“Section 19 of the Planning and Compulsory Purchase Act 2004 requires a local planning authority to carry out a sustainability appraisal of each of the proposals in a plan during its preparation.” (emphasis added)

Similarly, the final paragraph of the PPG (11-018) identifies that SA is an iterative process, with proposals being revised to take account of appraisal findings. To achieve this, it is necessary to prepare a SA alongside the preparation of Local Plan policies such that these policies can continue to be refined to limit or mitigate adverse effects and maximise benefits, with each such refinement considered in an update of the SA.

As the Reg. 18 document is strategic in nature, it is accompanied by an interim SA/SEA dated November 2020. This builds upon the 2017 SA Working Note that was published alongside the earlier Issues and Options consultation. The latest version is explicit that the SA is limited to how to distribute additional housing in the Green Belt (c5,500 new homes) and not how to distribute all the proposed new housing^[Footnote 2 Section 3.3 of the Interim SA Report – Non Tech Summary – Nov 2020]. It does not cover the c10,900 proposed homes inside settlement boundaries. This is deficient for the following reasons:

Whilst reasonable alternatives to the proposed Green Belt extensions have been considered in different parts of the SA to date, HLM has not been able to identify that any reasonable alternatives to the other policies are being fully identified or evaluated. This includes the absence of any consideration of reasonable alternatives to meeting the affordable housing requirement (of a minimum 35% of new homes) or the effect and wording of development management policies.

The absence of such appraisals cannot be justified as there are reasonable alternatives to the draft proposals that have not yet been considered. For example, a development strategy that achieves a balance of sites that would better respond to local housing need including affordable housing need must be considered to provide a reasonable alternative.

To date, the policies and proposals which are included in the consultation draft Local Plan have not been fully assessed in order to identify the likely effects which would result were the policies to be adopted in a new Local Plan. The Council must include an assessment of the likely delivery of affordable homes from its urban capacity sites in order to establish if an effective strategy can be delivered that meets the needs of all its housing requirements. This should be undertaken as part of its Assessment of whole plan effects for SA Objectives 10 (Health and Wellbeing); 11 (Sustainable Locations); 12 (Communities) and 13 (Housing).

The SA/SEA process should clearly demonstrate the rationale for the sites that feature in the next iteration of the Local Plan. HLM note that the 2020 version includes an updated range of reasonable alternatives for testing purposes. The Council recognises that further work is necessary, and the SA will continue to evolve. The Council's preferred strategy (Option Ci) shows very little difference at the high-level between each of the options considered, particularly in relation to likely significant effects.

The Council applied for and has obtained funding from Central Government to support the work required to develop plans for a new garden community to the north/east edge of Hemel Hempstead town for circa 11,000 new homes by 2050. The town has been awarded Garden Town status in 2019 by Government yet the SA only has a passing reference to Hemel Garden Communities despite it forming an integral part of the Councils preferred strategy for growth and features across several policies. There appears to be a substantial disconnect between the draft plan and the SA.

The fundamental criticism to the methodology is the lack of assessment of potential in-combination effects arising from the wider Hemel Garden Community aspirations and potential allocations in a St Albans Local Plan and/or the emerging Joint Spatial Plan for South-West Hertfordshire. It should take into account potential linked growth. It is currently deficient.

HLM consider the Council will need to review the balance of the development strategy across the borough in light of the updated SA/SEA and other evidence and any comments received during the Reg.18 consultation. There is insufficient evidence published alongside the Reg 18 consultation to properly review and consider whether the Council's approach is properly evidenced and justified. This goes to the heart of both legal compliance and wider soundness considerations.

Of those Green Belt sites considered in the Interim SA, no alternative strategic-scale spatial options have been assessed at Hemel to establish whether there is an alternative strategy that would better meet the aims of Green Belt policy to 2038 as an alternative to Phase 1 of the HGC.

QUESTION: Sustainability Appraisal comment	As stated in the Sustainability Appraisal: "any development that takes place on greenfield sites, including that in areas currently in the Green Belt has the potential for adverse effects relating to habitat loss, increased water consumption, impacts on local landscapes, soil sealing, natural resource use, increased waste, and increased emissions of both greenhouse gases and airborne pollutants"

Many of the proposed development sites are NOT close to facilities and services and are NOT well connected by transport infrastructure.

There is no comprehensive calculation in the plan or the SA on what is affordable in comparison to minimum wage and average wages in Dacorum.

Biodiversity (SA Objective 1)

Policies in the Local Plan should concentrate on housing and employment development in urban areas and away from greenfield sites to protect, maintain and enhance designated sites and their buffer zones and reduce the loss of agricultural land which may have biodiversity value. This laudable aim is not followed through in the selection of the proposed development sites in Berkhamsted and Tring, which include greenfield and agricultural land.

Net-gain for biodiversity should mean gains through the integration of green infrastructure into the new developments, protection of natural habitats in the new areas of development and a return of natural ecosystems by rewilding and connection of habitats.

Flood Risk (SA Objective 3)

SA states it has found 'no predicted effects' against this objective because the level of growth proposed in the Local Plan should be provided without the need to develop in areas of higher flood risk. However, the largest area of development in Tring, between Bulbourne Road and Station road,

floods regularly (please see picture attached in appendix to Q6 answers, taken in January 2021).

Greenhouse gas emissions (SA Objective 4)

The provision of 16,596 new homes and 116,500 sqm of industrial floorspace requires a detailed plan to reduce GHG emissions. This must contain the relevant data/evidence base and include planning for robust electric public transportation, zero emission construction and absorbing carbon dioxide from the atmosphere by tree planting (fixation).

Photo to support comments on Flood Risk (SA Objective 3) flooded land between Bulbourne Road and Station Road, in the largest area of proposed development in Tring. Picture taken January 2021.

Air Quality (SA Objective 5)

Transport is a key source of air pollution and so inevitably making provision for 16,596 new homes and 116,500 sqm of industrial floorspace over the Local Plan period will contribute to background emissions through an increase in the number of vehicles on the road.

The plan needs to provide a comprehensive data analysis on the negative impact on air quality. The outcome of such analysis should inform a plan which ensures the reduction of air pollution via:

- the selection of development sites which do not encourage car use or increase congestion;
- the creation of a robust electric transport network;
- planning which ensures net zero emissions from new developments; and
- the creation of carbon fixation via rewilding and protection of natural habitats.
-

Landscape & Townscape (SA Objective 9)

The SA and Plan sites an ambition to concentrate most of the development in the Borough's most sustainable settlements to reduce the amount of greenfield land required to deliver growth, thereby reducing levels of adverse effects on local landscapes. The aim is laudable but not carried through in the proposed development of Berkhamsted and Tring, in terms of design and site selection.

Housing (SA Objective 13)

Significant positive effects have been predicted against this objective as the plan requires the provision of 16,595 homes across the plan period. This meets the Borough's Objectively Assessed Need (OAN) and includes a mix of housing tenures, types and sizes of home (a minimum of 35% to be affordable housing), however, 'affordable' needs to be defined and must be based on the income of people working in Dacorum.

The percentage of affordable housing must be higher to solve the problem of the housing shortage for local people. By prioritising the development of truly affordable homes fewer houses will be required overall to solve the housing shortage, and there will be less pressure to build on the greenfield sites.

QUESTION: Sustainability Appraisal comment	Pigeon Hemel Hempstead Ltd considers that, overall, the methodology of the Interim Sustainability Appraisal (SA) appears to be robust. In assessing sites, DBC has sought to maximise the use of brownfield land in urban areas, before looking at releasing land from the Green Belt. The approach to direct growth to urban extensions on existing large settlements, through Green Belt release seems logical and necessary to meet the Local Housing Need in a sustainable manner.

However, Pigeon Hemel Hempstead Ltd consider that DBC could strengthen some parts of the SA. In particular, whilst Pigeon Hemel Hempstead Ltd agree with DBC's decision to reject the idea of a new settlement on land to the north west of the Borough, more could be done to document the unsuitability of this option in the SA. The same can be said of the justification provided for the dismissal of other sites and options, which superficially at least score relatively well against the SA objectives. Lessons learned in adjacent authorities together with the potential new approach advocated in the Planning White Paper suggest that the work will need to be seen to robustly test potential alternatives and very clearly articulate the reasons for the selection of the preferred strategy.

QUESTION: Sustainability Appraisal comment The Interim Sustainability Report (November 2020) addresses and analyses the six Growth Options that underlie the Spatial Strategy that supports the Emerging LP and, in particular, Option Ci that was finally chosen and upon which the emerging plan is based.

Option Ci envisages growth spread across the six main settlements, and with 'low growth' at the villages, including Bovingdon (for around 190 new dwellings in total). Option Cii, which envisaged growth spread across the six main settlements, however, it would have included 'high growth' at both Bovingdon (for up to 600 dwellings) and also at Kings Langley. BPC had previously provided its objection to such levels of growth as part of the Issues & Options consultation on the basis that, in comparison to the larger settlements within the Borough, even Kings Langley, Bovingdon suffers from a lack of easy access to the main highway network and to public transport services such as rail and frequent bus services, which would have made such major levels of growth highly unsustainable.

BPC is supportive of the conclusions drawn in respect of the chosen Growth Option Ci as stated at paras.5.5.2 and 6.4.14 of the Interim Sustainability Appraisal Report as it relates specifically to Bovingdon. The level of growth (around 190 new dwellings in total across the two allocated sites, a maximum of 150 of which would be at the new allocation at Grange Farm) that is proposed for Bovingdon throughout the Plan period is considered to be a sustainable level of

development which will provide the opportunity to address significant infrastructure issues that the settlement experiences at the present time.

BPC would not envisage or welcome that the proposed level of development for Bovingdon as indicated under Growth Option Ci would be amended upwards as the Emerging LP moves forward towards adoption. If it were to be the case, BPC would not support the loss of any further greenfield (Green Belt) sites around the settlement to accommodate higher levels of growth on the grounds that all other such sites have been assessed as being unsustainable in the drafting of the Emerging LP.

QUESTION: Sustainability Appraisal comment	<p>6.1 The Plan is not compatible with the objectives of the Sustainability Appraisal (SA)</p> <p>Dacorum’s Local Plan Interim SA Report November 2020 4.5 (page 24) assesses the compatibility between SA Objectives and Local Plan Objectives. In relation to Local Plan Objective: “Delivering Dacorum’s future with homes for everyone”, it concludes:</p> <p>“This objective is potentially incompatible with a number of the SA objectives:</p> <ul style="list-style-type: none"> • The level of housing development required in the Borough will require development of greenfield land. Development of greenfield land is not compatible with biodiversity (SA1) due to landtake, potential habitat fragmentation and urban pollution issues. Development on greenfield land would also result in soil sealing (SA6). • Providing new homes in the Borough will put direct pressure on water resources (SA2) which are already identified as ‘over-abstracted’. • Housing development will result in increases in greenhouse gas emissions from new housing and associated activities (SA4). It will also contribute to background emissions through an increase in the number of vehicles on

the road thereby reducing air quality (SA5). The objective also has uncertain compatibilities with several the SA objectives:

- Parts of the Borough lie within areas of flood risk and there is the potential for new housing sites to lie within these zones (SA3).
- Housing development on greenfield sites is potentially incompatible with the SA objectives on historic environment (SA8), and landscape / townscape (SA9).”

Similarly, the report details potential incompatibilities between SA objectives and two Local Plan Objectives: ‘Generating a vibrant economy with opportunities for all’, and ‘Enabling the delivery of infrastructure’.

The Local Plan should remove the word “potentially” and acknowledge that Local Plan Objectives are not compatible with sustainability.

The proposed developments contain insufficient social housing to meet local needs. For example, a semi-detached house in the Bearroc 2 site, adjacent to the new Northchurch developments, is priced between £500,000 and £800,000. This is beyond the means of people in Dacorum who need housing.

QUESTION: Sustainability Appraisal comment I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn ' t broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site ' s relationship with the existing physical landscape independently and fails to take into

consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact ; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as " East of Tring " fails to meet the efficient use of land objective and yet this isn ' t carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment The Sustainability Appraisal report lists the first 2 key objectives as follows:-

1 To protect, maintain and enhance biodiversity and geodiversity at all

Building 16000 new houses on 850 hectares of green fields, hedges and woods, and settling 50,000 + more people and their cats and dogs into them, can not be done without damaging biodiversity.

1 To protect, maintain and enhance water resources (including water quality and quantity)

DBC's own assessment states that the Gade valley, a Nationally/Globally important chalk stream, is already overextracted. At a high water efficiency level, each person uses about 150 litres of water a day, yet you propose to add 50,000 more people to the area. That's another 7.5 million litres a day - minimum.

Development at the level proposed is simply not compatible with these 2 objectives.

With regards to renewable energy, although it is mentioned that these proposals would be 'positively welcomed', they should instead form part of the local plan in order to provide energy for the excessive amount of extra buildings. Large scale solar and/or wind farms as well as other technologies should be incorporated into the plan.

QUESTION: Sustainability Appraisal comment I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn't broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site's relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the

intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined

as " East of Tring" fails to meet the efficient use of land objective and yet this isn' t carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment The Sustainability Appraisal

The SA supporting the Reg 18 consultation is a sound part of the evidence base. It follows the normal principles of assessing the characteristics of the Borough and establishing a set of SA objectives. It then evaluates the implications of a range of housing development and spatial options to accommodate the selected level of development. This option (and the sites necessary to deliver the option) are then assessed in the context of the SA objectives. Where this process identifies a need for mitigation measures, these are set out.

It is considered that the SA assessment of the North Hemel site (Appendix E, pages E2 to E4) is sound.

QUESTION: Sustainability Appraisal comment The proposed development will put pressure on the water supply. The water supply in the Chilterns is fragile and any additional need to pump water from the chalk aquifer will have a deleterious effect on the Rivers Gade and Bulbourne.

The inevitable increase in traffic arising from such large scale development will put huge pressure on already full roads. The proposed new road north of Hemel could have adverse unforeseen consequences on villages to the north and west of Hemel.

QUESTION: Sustainability Appraisal comment	<p>These representations support the overall identification of ‘Option C – Spread Growth across the six main settlements’ as the preferred development scenario. This does involve a distribution of growth. However, ‘Option Ci’ which is selected includes ‘low growth’ at Large Villages’ (Bovingdon = 150), which is now 241 inclusive of other extant commitments and existing allocations .</p> <p>Option Cii, which was assessed, indicated higher growth at Bovingdon (tested at up to 600 units). Overall, the selection of Option Ci is endorsed, contingent on the proposed allocation of land at Grange Farm which supports overall conclusions on the potential for exceptional circumstances to be demonstrated. These representations reserve judgement on the sustainability of Bovingdon to accommodate higher growth. It is apparent from the conclusions of the Council’s Sustainability Appraisal and site assessment process that no other reasonable alternatives perform favourably to the Grange Farm option, nor would other site options achieve the requirements of the Delivery Strategy either in isolation or in combination. Alternative sites could therefore only readily be considered in addition to Grange Farm, rather than as alternatives.</p> <p>An important point to recognise regarding the assessment of strategy options in Bovingdon relates to the fact that in rejecting the ‘higher’ growth option the overall position on benefits of sustainable development to the village cannot be considered to be undermined. This is an important distinction to the settlements of Markyate and Kings Langley and relates direct to the longer-term benefits provided via the Grange Farm site. Appendix C.2 to the Sustainability Appraisal states:</p> <p><i>“The second variation (Option Cii) is to allow a larger scale of growth at Bovingdon and Kings Langley, where such growth could deliver significant new infrastructure such as a new education facilities or avail of high quality public transport links/connections. This variation results in slightly less growth at Berkhamsted and Tring than with Option Ci, but remains significant in scale when compared to Options A and B.”</i></p> <p>In effect, selection of the proposed allocation at Grange Farm delivers substantial benefits including safeguarding land for a new 3FE school. The scale of the potential benefits to be achieved, aside from housing numbers, are equivalent to Option Cii, without the potential for wider adverse impacts.</p> <p>The Council’s reasoning at Section 5.5.2 of the main Sustainability Appraisal Report cites the constraints on Bovingdon as reasons to not select Cii and higher growth. These representations seek to emphasise that the role of the proposed Grange Farm allocation (even as part of an overall lower level of growth) should be specifically recognised in terms of its role in helping to overcome these constraints.</p>

- Whiteacre supports the overall identification of 'Option C – Spread Growth across the six main settlements' as the preferred development scenario. This does involve a distribution of However, 'Option Ci' which is selected includes 'low growth' at Large Villages' (Bovingdon = 150 homes), which is now 241 homes inclusive of other extant commitments and existing allocations.
- The Council's reasoning at Section 5.5.2 of the main Sustainability Appraisal Report cites the constraints on Bovingdon as reasons to not select Cii and higher growth. These representations seek to emphasise that the role of the proposed Grange Farm allocation (even as part of an overall lower level of growth) should be specifically recognised in terms of its role in helping to overcome these constraints.
- In effect, selection of the proposed allocation at Grange Farm delivers substantial benefits including safeguarding 3 hectares of land for a new three form entry (3FE) school. The scale of the potential benefits to be achieved, aside from housing numbers, are equivalent to Option Cii, without the potential for wider adverse impacts.

QUESTION: Sustainability Appraisal comment	<ul style="list-style-type: none"> The LP sets out sustainability objectives 1-15 (Appraisal of Sustainability p6) for development within the Borough. The CCG finds the LP failing to meet its own objectives for points 1-11 and questions whether points 12-15 are. Therefore, the CCG believes the LP fails to meet any sustainability objective for the future well-being of the Borough and its residents. In addition to the points identified previously, the CCG remains highly concerned that for all options water supplies and disposal of waste water is assessed as unsustainable (4.2) and further, that present water supplies are already '<i>over-abstracted</i>'. Clearly demand on both fresh water and disposal of waste effluents will increase significantly as more dwellings are built and as the LP identifies: '<i>risk of periodic water shortages increases</i>'. Indeed, the actual building process will place greater demand on water supplies. We find the Sustainability Assessment inadequate in its assessment of the negative impact upon the character and resources of the market towns of Tring & Berkhamsted, where '<i>neighbourhood</i>' developments of considerable size, relative to the existing settlements, are. For example, Tring would experience growth of 55% which would destroy its character and much of the natural green landscape and high quality farmland around its present developed boundaries.

QUESTION: Sustainability Appraisal comment	<ul style="list-style-type: none"> The Emerging Local Plan is supported by an Interim Sustainability Appraisal (SA) Report which includes a site assessment of fifteen sites in Berkhamsted against the Council's 15 SA objectives. As stated above, of these fifteen sites, thirteen were proposed for The proposed allocations are located in four key areas:

A growth area at South Berkhamsted (Policy SP21) comprises six major urban extensions:

- Bk01 Land south of Berkhamsted: 850 dwellings
- Bk02 British Film Institute: 90 dwellings
- Bk03 Haslam Playing Fields: 150 dwellings
- Bk04 Land between Hanburys and A41: 70 dwellings
- Bk09 Bank Mill Lane: 50 dwellings
- Bk10 Hanburys: 40 dwellings

The West Berkhamsted Growth Area (Policy SP22) comprises three major urban extensions

- Bk05 Land adjacent to Blegberry Gardens: 80 dwellings
- Bk06 Land East of Darrs Lane: 200 dwellings
- Bk08 Land at Rossway Farm (Between Shootersway and A41): 200 dwellings

A single urban extension at Bk07 Lock Field, Northchurch: 60 dwellings Three sites within the Urban Area

- Bk11 Billet Lane (Jewson site): 40 dwellings
- Bk12 Berkhamsted Civic Centre and Land to the rear of High Street: 16 dwellings
- Bk13 Gossoms End / Billet Lane: 30 dwellings.

- The two Berkhamsted sites that were assessed through the Sustainability Appraisal but are not proposed for allocation are Land east of Berkhamsted (our client's site) and Ivy House
- Turley has reviewed the draft allocation policies within Emerging Local Plan and the supporting evidence, in particular the SA, and has identified a series of irregularities in

the appraisal. **Appendix 1** sets out our review of the SA for proposed strategic allocations Bk01-09 plus Land East of Berkshamsted.

- The SA assessments of proposed strategic allocations Bk10-13 have not been reviewed because site Bk10 Hanburys already benefits from an allocation (LA4) in the Adopted Development Plan and sites Bk11-13 are situated within the urban area of Berkhamsted, so therefore these allocations are not comparable to the proposed greenfield allocations

Analysis of SA Scores for Land east of Berkhamsted, compared to Proposed Allocation Sites

- Table 5-5 of the Interim Sustainability Appraisal provides a summary of the scoring for each of the fifteen sites considered in Berkhamsted against each of the fifteen SA This is reproduced below.(attached)
- Several of the sites score the same as each other for a wide range of the SA objectives. All of the major urban extension sites have been scored negative effects "x" on the Landscape / Townscape SA objective, however this does not represent the variation between the sites on landscape. Nearly all sites are assigned positive effects in relation to the objective for Housing, Sustainable Prosperity and Employment and Skills. While we appreciate the SA objectives are applicable to the overall strategy and the whole plan, the lack of differential scoring between sites makes it hard to justify the allocation of certain sites over

1.2 Furthermore, where the effects on the SA objective are uncertain "?", (as is the case for many of sites in relation to Water, Resource Efficiency and Historic Environment), the SA is ineffective in assisting with site selection. For example, the objective relating to water scores uncertain effects for nearly all sites across Berkhamsted.

- Below we have considered how our client's site, Land east of Berkhamsted, scores in comparison to the ten major urban extensions that have been proposed for allocation through the Dacorum Emerging Strategy for Growth. In many cases, Land east of Berkhamsted scores either more favourably or equally as well as sites which have been proposed for allocation. It only scores worse, based on the Council's assessment, than proposed allocation sites in relation to the Landscape / Townscape objective, which is discussed further

1.4 Against the following objectives, Land east of Berkhamsted scores equally to the majority of the proposed greenfield allocations, and in some cases slightly better than the proposed allocations:

- **Water** – All sites score uncertain effects. The SA does not take account of Source Protection Zones. Land east of Berkhamsted is principally outside of the SPZ, while proposed allocations Bk02, Bk03, Bk04, Bk05, Bk06, Bk08 and Bk10 are all located within a
- **Flood risk** – All greenfield sites score either neutral or uncertain effects except Bk09 Bank Mill Lane which is adjacent to the
- **Soils** – All sites score negative effects, except for Bk02 British Film Institute, which is previously developed land. The Council has accepted it is unable to meet its housing requirements on previously developed land and as such the principle of the loss of greenfield land has already been
- **Resource Efficiency** – All sites score either neutral or uncertain effects, with uncertain effects being attributed to Land east of Berkhamsted and seven other sites because they lie a within Minerals Safeguarding
- **Historic Environment** – All sites score uncertain effects, except for Bk01 South of Berkhamsted and Bk06 Land east of Darrs Lane which score negative effects
- **Health and Wellbeing** – All sites score mixed positive and negative effects except for Bk09 Bank Mill Lane because of its proximity to the town centre, and Bk06 Land east of Darrs Lane. We explain in **Appendix 1** why we think Bk06 Land east of Darrs Lane should score mixed positive and negative effects and why Land east of Berkhamsted should score significant positive effects for its contribution to health and wellbeing due its ability to provide significant sports pitches and
- **Community Cohesion** – All sites score positive effects, although in **Appendix 1** we set out why only Bk01 South of Berkhamsted should score positive effects and Land east of Berkhamsted should score significant positive effects, owing to the opportunity to provide significant sports pitches and facility provision on the eastern part of the
- **Sustainable Prosperity** – All sites score positive effects, except for Bk02 British Film Institute which will result in the relocation of some employment.

- **Employment and Skills** – All sites score positive effects, except for Bk02 British Film Institute which will result in the relocation of some
- Land east of Berkhamsted scores more favourably than a number of the proposed allocations against the following objectives:
- **Biodiversity** – Many of the proposed allocations score negative effects, however four sites score mixed positive effects, including Land east of Berkhamsted, due to the opportunities to provide a SANG to mitigate recreational impacts on Chilterns Beechwoods SAC. We have in fact queried the attribution of positive effects at two of these sites (see **Appendix 1**) and consider that only Bk01 South of Berkhamsted and Land east of Berkhamsted should score positively in relation to the biodiversity
- **Climate Change** – The majority of sites score negative effects against this objective, however positive effects are identified for Bk07 Lock Field and Bk09 Bank Mill Lane and mixed positive and negative effects are identified for Bk01 South of Berkhamsted and Land east of Berkhamsted. Given that the our client, as the housebuilder who will deliver the development at Land east of Berkhamsted is committed to achieving zero-carbon homes on-site by 2025 (well ahead of national government targets and UN targets) and is the only housebuilder in the UK and only one of five construction companies in the world to be signed up to the SME Climate Hub, and be part of the United Nations’ Race To Zero campaign, we would suggest that Land east of Berkhamsted provides a better opportunity to produce significant positive effects on climate change than any of the
- **Air Quality** – The majority of the sites score negative effects, whereas Land east of Berkhamsted, Bk01 South of Berkhamsted, Bk07 Lock Field and Bk09 Bank Mill Lane score uncertain effects. We have raised concerns about how the effects of the options are assessed against this objective and we would suggest that any site which does not provide any on-site facilities or public transport improvements is likely to result in significant negative effects, whereas sites which would provide a local centre, schools, sport facilities and sustainable transport options are more likely to result in positive effects. As Land east of Berkhamsted can provide a direct link to the A41 (which would also benefit proposed allocation Bk01 South of Berkhamsted), it would reduce traffic travelling through Berkhamsted, in direct contrast to sites to the west of
- **Sustainable Location** – This is perhaps one of the most relevant SA objectives in influencing the site allocation process, yet five of the proposed greenfield allocations score negative effects, while Land east of Berkhamsted will result in positive effects. The SA recognises that many of the sites that make up the South and West Berkhamsted growth areas are not in sustainable locations. (Bk02 British Film Institute, Bk03 Haslam Playing

Fields, Bk04 Land between Hanburys and A41, Bk05 Land adjacent to Blegberry Gardens and Bk08 Land at Rossway Farm).

- **Housing** – While all sites score positively for their contribution to this objective, Land east of Berkhamsted and Bk01 South of Berkhamsted are of a strategic scale that will result in significant positive
- Land east of Berkhamsted only scores less favourably than the other proposed allocations against the following objective:
- **Landscape/Townscape** – The SA identifies that the site will result in significant negative effects, as opposed to negative effects for all other greenfield sites. We contend that this is not an accurate reflection of the effects based on evidence as discussed
- The AONB wraps around the west and north of Berkhamsted. Our client's site is located outside of the AONB, to the south-east of Berkhamsted. The AONB runs to the north of the railway line, meaning that the closest part of the site to the AONB boundary is in fact the area proposed for a country park, with only small parcels to the west of the site and adjacent to the proposed allocation Bk09 Bank Mill Lane proposed for development. It is unclear why sites to the west of Berkhamsted, which are much closer to the AONB boundary and therefore more likely to have an effect on the AONB, have been scored more favourably with regard to landscape than our client's
- Alongside these representations and in support of Land of east of Berkhamsted, we have supplied evidence¹ to demonstrate that the potential for the Land east of Berkhamsted site to affect the expected high quality experiences and characteristics of the Chilterns AONB is limited to a very localised view and equally limited receptors. The landscape experienced within the view does not contain any of the special qualities associated with the AONB and is not considered an outstanding or high quality view. It is not within an area identified as highly representative of the AONB and overlooks an ordinary rural landscape and the existing urban settlement of
- Whilst the proposals will extend the influence of built form within the mid ground, they have been considered to break up massing through retaining the views of the ridgeline, locating open space to break up parcels and ensuring a well treed setting that mirrors the muted existing settlement at Berkhamsted. Therefore it is considered that the proposed development, whilst there will be an increase in urban form within the view, will not significantly detract from the enjoyment and expectations of the current

- The SA includes a summary of Dacorum Borough Council’s reasoning for not including the site in the Draft Local Plan:

“The site suffers from a number of constraints, principally relating to Green Belt and landscape sensitivities including the potential for development to impact the setting of the Chilterns. Development of the whole of the site would erode the important open gap separating Berkhamsted with Bourne End village and with Hemel Hempstead.

Officers considered a smaller scale of growth which would reduce the impact on a number of these issues, however additional evidence has concluded that landscape sensitivity remains high. In reviewing proposed mitigation measures for the site, officers

1 DLA Reports

are not confident that a smaller scale of development will result in a less than significant impact on the immediate and wider landscape including the setting of the Chilterns AONB. Officers have given serious consideration to the sustainability merits of the site, including the potential to deliver significant new infrastructure such as new education provision, a new community hub, public open space, potential new sports/leisure facilities and a new link road linking London Road with the A416 (via site 2: South of Berkhamsted). Currently officers do not consider the merits of the site outweigh the impact that development would have on landscape, particularly the setting of the CAONB and in terms of the impact development would have on the role and function of the Green Belt in this location, eroding the gap between the settlements of Berkhamsted and Hemel Hempstead; both of which would be significant. On balance, officers consider there are more appropriate sites elsewhere which can deliver the strategy and which will not give rise to such significant impacts.”

- All of the greenfield sites considered around Berkhamsted are located within the Green Belt, so it is unclear why the Green Belt is stated right upfront as a reason for not allocating Land east of Furthermore, the Council has described the Green Belt as a “constraint” when in fact it is a policy designation, and therefore not a reason for rejection, and it is not engaged by any of the criteria within the SEA regulations. The review of Green Belt land (a separate evidence study) should not be used to overlook the outcomes of the SA for sites that could be deemed ‘reasonable alternatives’
- The most sustainable locations for development may include a small number of sites that perform more strongly against the purposes of Green Belt, but which when reviewed against all SA objectives would, on balance, be suitable for allocation in order to help meet the housing needs of the

- Davies Landscape Architects (DLA) has provided landscape evidence which includes a strategy that has informed the vision for the Land at east Berkhamsted and ensures the overall impact of the development on the AONB is mitigated. It is not proposed to develop the whole site, and DLA Green Belt Technical Note demonstrates how the proposal will not weaken the gap between Berkhamsted and Hemel Hempstead. The proposed development would provide a contained extension within a well-defined new threshold and defensible boundary to Berkhamsted, and remain spatially and visually separated from Hemel Hempstead.
- Based on our revised scoring for the sites assessed at Appendix One, it is considered that Table 5.5 of the Sustainability Appraisal (provided above) should be amended to reflect the below (attached)

 Account should be taken of the National Pollinator Strategy 2014 to 2024. Implementation (NPS, to be found at https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/301462/nps-2014-2024-implementation.pdf#=The%20National%20Pollinator%20Strategy%20sets%20out%20the%20evidence%20and%20measures%20to%20improve%20the%20state%20of%20our%20bees%20and%20other%20pollinating%20insects%20and%20how%20they%20are%20monitoring%20progress%20and%20the%20need%20for%20more%20and%20better%20habitat%20and%20this%20is%20what%20the%20Justice%20and%20Peace%20Group%20are%20trying%20to%20achieve%20with%20other%20organisations%20and%20individuals%20in%20Tring%20One%20of%20the%20actions%20set%20out%20in%20the%20NPS%20is%20to%20develop%20plans%20for%20a%20network%20of%20wildflower%20recovery%20areas%20to%20provide%20opportunities%20for%20conserving%20pollinators%20as%20outlined%20in%20the%2025%20Year%20Environment%20Plan%20page%2010%20of%20the%20NPS%20There%20is%20an%20opportunity%20to%20provide%20this%20for%20Tring%20in%20the%20Local%20Plan &text=Added%20a%20link%20to%20the%20evidence%20statements%20and%20summary%20of%20evidence). This sets out what the Government will be doing to improve the state of our bees and other pollinating insects and how they are monitoring progress. There is a need for more and better habitat and this is what the Justice and Peace Group, Tring are trying to achieve with other organisation and individuals in Tring. One of the Actions set out in the NPS is to develop plans for a network of ‘wildflower recovery areas’ to provide opportunities for conserving pollinators, as outlined in the 25 Year Environment Plan (page 10 of the NPS). There is an opportunity to provide this for Tring in the Local Plan.

Historic Environment (page 18)

A small area of archaeological significance lies within Tr03m in the area south of Marshcroft Lane. It is understood to comprise 'an enclosure of probable iron Age or Roman date that has been identified from cropmarks visible on aerial photographs.' (page 27 of Dacorum's Schedule of Site Appraisals (for Large Greenfield Sites) October 2017). I would like to see an investigation of this important archaeological area before further consideration is given to development of this site.

QUESTION: Sustainability Appraisal comment I have a specific concern in relation to the Assessment method used for the sustainability appraisal, insofar as it is able to appropriately assess environmental impact. The Assessment relies on a commentary and narrative approach within a Site Assessment Table, due to a lack of specificity with regard the structure of the scoring system which isn' t broken down beyond opinion raised against headings. This is an issue as when assessing individual sites; the assessment has brought forward an assessed position only with regard to that site' s relationship with the existing physical landscape independently and fails to take into consideration any cumulative impact of multiple sites being built upon. This is a particular issue for the assessment with regard to Tring, given that the intended allocation strategy seeks to allocate a wide-spread number of individual sites which would clearly, create cumulative effects upon the wider locality that fails to be sufficiently addressed or measured within the Assessment.

Therefore, in summary the assessment within the scoring system does not consider cumulative impact; that which would be expected to be assessed within applications wherein an Environmental Impact Assessment is required. On a site-specific basis, there is recognition that the land defined as " East of Tring" fails to meet the efficient use of land objective and yet this isn' t carried through into the results. Why is this? The land to the East of Tring (Tr02 and Tr03) is protected

under Green Belt designation and is highly sensitive due to its contribution to Green Belt openness, its interrelationship with the Area of Outstanding Natural Beauty and its agricultural and ecological contribution to the wider area. Any incursion into this space will cause irreversible and substantial harm that cannot be reversed or mitigated for and for which development has not been justified.

Nothing raised within the Sustainability Appraisal identifies that this assertion is incorrect and clearly identifies harm that has failed to be acknowledged within the approach to allocation.

QUESTION: Sustainability Appraisal comment *Sustainability Appraisal*

- The DBC Site Assessment Topic Paper pro-forma also incorporates the findings from the Interim Sustainability Appraisal Report (November 2020). Given the availability of site specific technical information, the Interim Sustainability Appraisal pro-forma contained in the Appendices, has been re-viewed as set out
- The site has been assessed in relation to a number of categories relating to the sustainability of the site. The analysis of the site uses the same traffic light system as used in the Council’s Interim Sustainability Appraisal, with green meaning the option is likely to have a significant positive effect, red when the option will be likely to have a significant negative effect and a range of shades of light green, yellow, white and amber in
- The revised Sustainability Appraisal (SA) draws on technical information from previous submissions, including the Shendish Manor promotion submitted in February 2019 (**Appendix 4**) and the Transport Appraisal Update Note (**Appendix 5**) and an Air Quality Technical Notes (**Appendix 6**) appended to these
- The analysis of Land at Shendish is summarised

Biodiversity

- The site has an Orange rating for Biodiversity as DBC's SA states that the development would result in the loss of greenfield land and areas of woodland which have some biodiversity
- As per the Ecological Appraisal which was submitted as part of the February 2019 promotion, beyond the normal requirements to avoid impacts on protected species and maintain key elements of the habitat resource of the site, there is no overriding nature conservation constraints that would preclude the proposed allocation of the proposed area. There are no habitats of International, National, Regional or County nature conservation importance within the site itself. The existing areas of highest ecological value within the proposed development area will be retained, enhanced and protected as part of the
- Therefore the rating should be reduced from Orange to Light

Water

- The site has a Yellow rating for Water as it states that local upgrades to the network may be required to manage additional capacity for water and
- The Utilities and Drainage Assessment contained in **Appendix 4** provides an assessment in relation to the water and wastewater. Some reinforcement work would be required, however the relevant statutory undertakers have not indicated that new pumping station would be

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

Flood Risk

- The site has a White rating for Flood Risk as it is unlikely to have an impact as the site is not in Flood Zones 2 and
- As per the Drainage and Utilities Assessment submitted as part of the March 2019 promotion, the design of the proposed scheme includes features to reduce flood and pollution risks and to promote sustainable drainage practice. This is therefore not a constraint on housing development on Land at

Climate Change

- The site has a Light Green rating for Climate Change. DBC's SA states that the site is close to Apsley local centre and has good access to public transport which could decrease the need to travel by car and reduce the level of

growth in greenhouse gas emissions. The development would also be large enough for district heating opportunities to be

- We consider that the site has excellent access to public transport, given that it is only a 5 minute walk from the centre of the site to Apsley train station and bus services on London Road, as well as services diverted into the
- The site provides opportunities for renewable energy production, the effective disposal of waste, the sustainable design of new development and careful land management. Combining this with sustainable design and construction, and sustainable urban drainage systems, it is clear that this site could provide a significant positive effect on climate change and therefore the rating should be Dark

Air Quality

- The site has a Light Green and Orange rating for Air Quality. DBC's SA states that the site is close to Apsley local centre and has good access to public transport which could decrease the need to travel by car and reduce growth in airborne
- The assessment goes on to state that development at this location could increase congestion on London Road with associated implications for local air quality. An Air Quality Management Area (AQMA) was designated in 2011 for part of London Road near to Apsley local centre and additional traffic created by the development at Shendish is likely to add to existing
- The Air Quality Technical Note set out in **Appendix 6** confirms that based on the results of a dispersion modelling assessment, potential impacts on annual mean NO₂ concentrations associated with vehicle emissions from the development are predicted to slight at one position and negligible at 14 positions. As such the impacts are not significant according to IAQM criteria. The assessment also confirms that it is highly unlikely future occupiers will be exposed to levels of NO₂ above limit values; and that the proposals will include mitigation measures suitable for the size and nature of the
- The rating for this site is therefore Dark

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

Soils

- The site has an Orange rating for Soils. DBC's SA states that the site is greenfield and development would result in soil
- The northern part of the site is currently in use as a golf course (which would be reconfigured) while the southern area is in an agricultural use. However, the Agricultural Land Classification map highlights the site as being Grade 3 Good to Moderate and is not considered to be a constraint to development. Soil protection measures will be used

to mitigate the effects of development such as the reuse of top soil landscaping. Therefore the rating should be Dark

Resource efficiency

- The DBC SA indicates that the site is located within the Brick Clay Mineral Safeguarding Area with implications for safeguarding mineral
- The area adjacent to the railway line is unlikely to be suitable for extraction due to health and safety and land stability issues. It is unlikely that it would be commercially viable to extract from the remaining site area and given the heritage sensitivities of the wider Shendish Manor parkland landscape, mineral extraction is not considered to be constraint to development. Therefore the rating should be Dark

Historic Environment

- The site has a Yellow rating in relation to Historic Environment. DBC's SA states development may affect the setting of the nearby Shendish Manor Locally Listed Park and Garden and a number of nearby Grade II Listed Buildings. It also states that the site is partly within an Area of Archaeological Significance and may contain heritage assets of archaeological interest.
- As per the Heritage Desk-Based Assessment submitted as part of the February 2019 promotion in **Appendix 4**, no buried archaeological remains have been recorded within the Site and there is no specific potential for significant remains to occur within the site. However there is potential for the presence of some buried archaeological remains to occur. The site lies within an area of archaeological potential, to the west of an Archaeological Alert
- The site lies approximately 300m to the east of the Grade II Listed Shendish House and an associated locally registered park and garden. The Heritage Desk-Based Assessment states that the proposed development will not alter any of the important parts of the setting of the Grade II Listed Shendish House that contribute to the asset's significance. It is considered that the proposed development will alter the setting of the locally registered park and garden, to a limited degree, through the loss of part of its wider parkland setting. This harm can be mitigated by a retention of historic tree clumps within the site and through strengthening the tree belt within the site that defines the historic approach towards the gardens and

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

- Any development coming forwards on Land at Shendish, could provide a suitable separation buffer to the heritage assets and be designed to ensure no adverse impacts on the setting of the Listed Buildings. However, given the sensitivities of the wider historic landscape the rating remains

Landscape/Townscape

- The site has an Orange rating in relation to Landscape/Townscape. DBC's SA states that development at this location would extend Hemel Hempstead into the countryside and reduce the gap between Hemel Hempstead and Rucklers Lane. Development of the site would have a visual impact on the landscape of the Gade Valley, although the retention of the golf course would help to reduce these effects. The Sustainability Appraisal also states that there would be an impact on the parkland setting of Shendish
- The Preliminary Landscape Appraisal submitted as part of the February 2019 promotion (set out in **Appendix 4**) surveyed the wider Shendish Manor site and concludes that there are 8 Landscape Character Sub-Areas. The areas proposed for allocation are within the Shendish Manor Golf Course (East), Land off Ruckler's Lane and Fairfields Sub-Areas. The overall scores of these areas ranges from high to
- However while the wider landscape including Shendish Manor, its parkland setting and golf course has a higher landscape value, the area identified for development is in the lower lying portion of the site and reflects the part of the site that has been assessed as having the lowest potential landscape sensitivity.
- Given the sensitivity, the rating remains

Health and Wellbeing

- The site has a Yellow rating in relation to Health and Wellbeing. DBC's SA states that the site is close to the railway line which could result in noise levels affecting health and well- It also states that the site's location close to local amenities could encourage active travel, though access to the public right of way paths that cross the site may be affected by the development.
- The proposed site allocation is mainly exposed to sound from rail traffic on the Westcoast Mainline railway and the initial site risk assessment contained in the Noise and Vibration Assessment in **Appendix 4**, shows the site to be low to medium risk and appropriate mitigation can be
- Furthermore, the development will provide with a number of footpaths and access to open space which will allow for the health and wellbeing of future communities. This rating should therefore be reduced to Light

Sustainable Locations

- The site has a Light Green rating in relation to Sustainable Locations. DBC's SA states that the site is close to Aspley railway station and is within a reasonable distance of facilities and This is therefore not a constraint on housing development at Shendish Manor.
- The site is an exceptionally accessible location and provides many opportunities for sustainable travel. The site is located within a 5 minute walking distance of Apsley Station from the centre of the site (400m) and a wide range of everyday facilities and services Residents will have excellent opportunities to travel on foot or by bicycle to access these facilities instead of using a car. Development at this site in relation to this objective will have a positive effect. This rating should therefore be Dark Green.

Community Cohesion

- The site has a Light Green rating in relation to Community Cohesion. DBC's SA states that a site of this scale has the potential to contribute to community facilities including a new local centre and primary schools with the possibility for a secondary school. This is therefore not a constraint on housing development at Shendish Manor.
- The proposals make provision for a site for a 2FE primary school with pre-school nursery and associated playing fields, a 160 unit care village, a community hub with village hall (potentially utilising the existing barn at Fairfields), a station plaza with café, newsagent and live work The scheme will also deliver recreational facilities and children's play areas.
- The rating should therefore be Dark

Housing

- The DBC SA has a Dark Green rating in relation to Housing as development of the site would provide c.550 dwellings which would provide a significant positive effect. This is therefore not a constraint on housing development on Land at
- The site has been assessed for 500 dwellings or 439 dwellings and a 160 unit care

Sustainable Prosperity

- The site has a Light Green rating in relation to Sustainable Prosperity. DBC's SA states that new housing should help to support the local services in the town, maintaining their viability and boosting the local economy. Development

will therefore allow sustainable levels of prosperity and economic growth and this is therefore not a constraint on housing development at

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

Employment and Skills

- The site has a Yellow rating in relation to Employment and Skills due to a lack of certainty about job losses associated with the golf course. The development proposes to retain and reconfigure the golf course and therefore no negative effects will be felt with regards to this Furthermore, Shendish Manor is well located for employment opportunities, with opportunities in Apsley, Hemel Hempstead, Watford and London which are all easily accessible from the site via sustainable transport modes, such as the train from Apsley station.
- Therefore the site performs well in relation to Employment and Skills and the rating should therefore be light

Comparison Sustainability Appraisal Assessment

- The Table below summarises DBC's ratings and Boyer's suggested ratings based on a review of the assessments and evidence base, and mitigation that can be provided if development were to come forwards on the

Summary

- The summary at the end of the DBC Interim SA site assessment highlights that the site performs well but Officers remained concerned about safe access over the railway line or onto Rucklers Lane. Both matters are addressed in the Transport Appraisal Update Note (**Appendix 5**) which overcomes these issues. Concerns were also raised regarding the impact on the local and strategic network with associated air quality issues. These matters are also addressed in the Transport Appraisal Update Note and the Air Quality Technical Note (**Appendix 6**). As these matters have been resolved and the site performs very well in the revised SA, the site is considered suitable for inclusion in the Draft Plan.

QUESTION: Sustainability Appraisal comment	<p>It is proposed to use Green Belt land at Dunsley Farm, Tring (7.4 hectares) for employment as well as housing. This site is surrounded by the AONB which would be harmed by such development. The AECOM study, which is the basis for the inclusion of this site, makes reference to the Ridgeway National Trail being on a scarp of the AONB but fails to take into account the significance of this important and sensitive section of the AONB. This National Trail passes over Ivinghoe Beacon and Pitstone Hill both of which provide extensive views from the AONB that will be spoilt by what will be seen as a blot on the landscape. This is therefore clearly a site that should never have been put forward and ought to be withdrawn, especially following the very recent change in Government policy including the statement mentioned previously "We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places"</p> <p>The Dunsley Farm allocation together with the other large Tring allocations will inevitably put additional pressure on Tring station. The plan recognises that additional parking provision will need to be made but this is not seen as a problem. However, the fact that Tring Station is within the AONB seems to have been overlooked by AECOM in their assessment for Dacorum.</p> <p>The AECOM assessment carried out for Dacorum states that there is "No risk of coalescence with other settlements" a reference to a primary reason for the Green Belt which in this case means preventing Tring from merging with Berkhamsted but has direct implications for Wigginton. As Tring and Wigginton are less than 1 km apart there is a longer term risk of coalescence as the land at Dunsley Farm extends as far as the Wigginton village envelope. Should the proposed Dunsley Farm site go ahead, it would leave this remaining farmland somewhat isolated and could lead to the need for replacement agricultural buildings etc. and perhaps a replacement farmhouse.</p> <p>Furthermore Hertfordshire County Council, who own Dunsley Farm have previously promoted for housing the farmland stretching from the A41 all the way up to Wigginton. It was included in the 2008 Site Allocations as 01h23 and 01h24 but not subsequently taken forward.</p> <p>The recent change in Government policy together with the poor performance of the 3 large Tring allocations in terms of harm to the Green Belt and more particularly to a particularly sensitive part of the Chilterns AONB would make it appropriate to remove all three from the current plan. If after a more thorough site search no better alternative sites could be identified, then a more detailed assessment of these rejected sites should be included in the plan submission so that the Inspector can make the decision whether to include them or not. An Inquiry Inspector is unlikely to go against recent Government policy " We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places"</p>

QUESTION: Sustainability Appraisal comment	<ul style="list-style-type: none"> The Environmental Assessment of Plans and Programmes Regulations 2004 (SEA Regulations) requires that an environmental assessment of plans and programmes, including Local Plans is carried out. The regulations require identification, description and evaluation of the likely significant effects on the environment of implementing the plan and of reasonable alternatives taking into account the objectives and the geographical scope of the plan (Article 12(2)). In addition, an outline of the reasons for selecting the alternatives dealt with and a description of how the assessment was undertaken including difficulties encountered in compiling the required information is required (by Schedule 2 of the Regulations). Paragraph 32 of the NPPF states that local plans should be informed throughout their preparation by a sustainability appraisal (SA) that meets the relevant legal This should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). Significant adverse impacts on these objectives should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be proposed (or, where this is not possible, compensatory measures should be considered). <p><u>Methodology</u></p>

- It is noted that the Interim SA report published as part of the current consultation follows consultation on the SA Scoping report in March 2017 and SA Working Notes in relation to the Issues and Options Plan and Site Appraisals in November. The staged approach to consultation, in line with SEA Regulations, is supported.
- The methodology used by RTP, appointed by DBC to prepare the SA, is also considered to be broadly in line with SEA Regulations and Planning Practice Guidance and is therefore supported. Our comments on the application of the methodology, focusing on the assessment of spatial strategy options and sites is provided below.

SA Framework Objectives

- Croudace broadly support the SA framework objectives identified within Table 4-2 of the Interim SA. The objectives are considered appropriate for the Borough, consistent with the Local Plan objectives and in combination should enable the Plan to realise sustainable development.

Identification and Assessment of Reasonable Alternatives

- We note that the SA reports prepared to date present the findings of assessment of reasonable alternatives as well as reasons for selecting/rejecting. This is supported; however, it is recommended that further detail explicitly justifying the selection/rejection of reasonable alternatives is provided within the final SA report to be prepared alongside the Regulation 19 stage Local Plan to provide clarity on how the Plan has been prepared and options considered throughout its preparation. In addition, it is

recommended that commentary in relation to options rejected at an early stage is included in the final SA so that justification for all rejected options can be found within one report.

- Turning to the options assessed, it is noted that three different levels of housing growth were originally considered within the 2017 SA (602dpa, 756dpa and 1000-1100dpa) alongside three spatial strategies for distributing growth ('Focus on three towns', 'Hemel Hempstead focus' and 'Spread more evenly across the Borough'). Further assessment of options is more recently included within the Interim SA report, specifically:

- Option A - Focus growth on the 3 main towns (Hemel Hempstead, Berkhamsted and Tring), based on 922dpa
- Option B - Focus growth on Hemel Hempstead, based on 922dpa
 - Option C (i & ii) - Spread growth across the six main settlements, based on 922dpa
 - Option Ci: Spread across the six main settlements (low growth at villages)
- o Option Cii: Spread across the six main settlements (high growth at Bovington and Kings Langley)
- Option D (i & ii) - New settlement alongside growth at the 3 main towns, based on 922dpa
 - Option Di: New settlement in the north-west of Borough
 - Option Dii: New settlement at Bovington airfield
 - Option E - Higher growth option, based on 1100dpa

- We note that the delivery of c. 10,900 new homes inside settlement boundaries (on sites assessed as part of the Urban Capacity Study) is consistent to all options tested within the Interim SA

- We welcome the assessment of a broad range of options within the SA as well as the commentary provided in relation to further options rejected due to not being considered reasonable

- We broadly support the findings of the assessment of housing requirement and spatial strategy options, recognising that the high level assessment results in greater uncertainty about the likelihood of some. In particular, we strongly support the conclusions that a housing requirement below the standard method would not be appropriate for the Plan (Table 5-2) and that it is more sustainable to focus the majority of growth in the three main towns within the Borough (section 5.3.3.2 and Table 5-3). These are key factors which should inform the final Local Plan as we discuss further below.

- In the context of the above, we support the selection of Option Ci (growth spread across the six main settlements with low growth at villages) as the spatial strategy to be pursued by the

- Whilst the work done to date is welcomed, assessment of further reasonable alternatives is considered necessary, for example to test an alternative housing requirement figure following publication of the revised local housing need figure for Dacorum (1,023 dpa) as a result of recent updates to the Standard Method by the Government in December 2020 and revised spatial strategies which may result from

- Positively, Croudace recognise Option E equates to a quantum of development broadly in line with the revised standard method figure and as such there is existing evidence to demonstrate that higher growth will result in an

increased positive effect on SA Objective 13 (Housing) compared to the current preferred scenario and broadly comparable effects on the other wider SA. However, there may be a need for further examination and exploration of spatial strategy options taking account of the revised housing need figure. We discuss the implications of the revised housing need figure for the Borough further below.

- In respect of the assessment of sites within the SA, we consider that this has been undertaken in a manner broadly in line with Planning Practice
- We comment upon the assessment of proposed site allocation Bk08: Rossway Farm (the Site) in Section 7 of these

Thakeham notes that some of the criteria has either not been fully assessed or has been incorrectly assessed. In the below points, Thakeham provides additional information in relation to Biodiversity, Water and Resource Efficiency as a result of the Council's '?' grading to allow the Council to fully assess the Site:

- **Biodiversity** – Thakeham is committed to delivering at least a 10% Net Biodiversity Gain on all of its development sites, working closely with charities such as The Wildlife Trust, in order to achieve these. Therefore, the assessment should score the site as
- **Water** – Thakeham has committed as part of its published Sustainability Strategy that all sites will have targets to protect the resilience of the green and blue infrastructure for future. Thakeham is committed to designing and building water efficient developments and homes by mitigating flood risk through the installation of Sustainable urban Drainage Systems (SuDS) in a way that enhances biodiversity and protects water resources by minimising water consumption during the construction phase. Beyond this, Thakeham is researching water neutrality and is seeking to reduce the demand for potable water, by investigating rainwater harvesting at a development- scale as part of a system towards water neutrality with the aim to mitigate future water stresses and support resilience. Based on the above, the assessment should score the Site as
- **Resource Efficiency** - Thakeham has also committed as part of its published Sustainability Strategy to move all materials and systems towards a circular

Thakeham is committed to eliminating the impact of the production of homes through targeting carbon emissions, Modern Methods of Construction, waste, and water and is developing a Responsible Procurement Policy which promotes products with the lowest social and environmental impact. Thakeham has committed to be carbon neutral in production from 2025, which includes the process of material selection, transport, construction, and disposal. This will be achieved through a variety of ways including through making informed product choices, reducing waste and transportation, stakeholder engagement to improve the availability of sustainable resources, and investments in renewable energy. Any construction waste diverted from landfill through reuse off-site, recovery, and recycling will be measure, with the target being a 100% landfill diversion rate. Therefore, the assessment should score the site as .

Thakeham disagrees with the Council's assessment of the Site against the criteria 'Soils' and 'Landscape/Townscape' criteria and has provided an alternative assessment below.

As shown by page 43 of the Interim Sustainability Appraisal Report Appendices, the Site has been assessed as "red" against the soils criteria on the basis the Site is identified as 'Grade 2' on the Natural England Agricultural Land Classification map Eastern Region (ALC008) dated 2010. Thakeham raises concern with the evidence used by the

Council to assess all the sites against the criteria, as the map does not go into sufficient detail. This is accepted by Natural England as when downloading the map from the Natural England website, the following is stated 'These maps are not sufficiently accurate for use in assessment of individual fields or sites and any enlargement could be misleading. The maps show Grades 1-5, but Grade 3 is not subdivided.'

Thakeham is of the view that in order for each site to be assessed sufficiently, a desk-based study and field survey is required to assess the factors that affect each site – for instance, climate: temperature and rainfall, aspect, exposure and frost risk, site: gradient, micro-relief and flood risk and soil: texture, structure, depth and stoniness, chemical properties. Only after an appropriate study has been taken place can the sites really be given an accurate agricultural land classification.

Thakeham would also like to highlight that the map is not displayed at a suitable scale for assessing individual sites. As shown by the extract below, Thakeham is of the view that the Site appears to be coloured Green 'Grade 3' but even if the Land at Fox Meadow is considered Grade 2 Agricultural Land this should also apply to the adjacent site 'Land at Homefield', where this is assessed as in same assessment rather than .

Extract - Natural England Agricultural Land Classification map Eastern Region (ALC008) dated 2010.

Whilst the Council has not provided sufficient evidence to assess a site's agricultural land classification, even if the land was assessed to be of Grade 2 quality, the loss of land at the Site would not significantly harm national, regional or local agricultural interests and it would not result in the fragmentation of any agricultural holdings that would undermine the economic viability of the remaining holding. The Site is adjacent to the existing settlement and other land, further from existing settlements, would have far greater agricultural use as part of a wider network of connected, undeveloped land. The Site is no longer suitable for agricultural use and due to its location, the Site is a better and more sustainable location for housing development and community uses such as the scout hall and playing fields.

As noted in the Council's Stage 2 Green Belt Study (dated December 2016), the site forms part of a larger parcel (Parcels BV-A5) which is considered to make a weak contribution to the purposes of the Green Belt (page. 71). The Site is visually well contained with strong defensible boundaries.

As stated in AECOM's Site Assessment Study (dated January 2020) instructed by the Council as part of its evidence gathering, no Landscape/Townscape issues are identified with the Site (Fox Meadow) *"The site is not within the Chilterns AONB and would be unlikely to impact the setting of the Chilterns AONB due to distance and intervening features. The*

site is within LCA 107 of the DLCA; the condition of the LCA is described as moderate, and the strength of character is described as moderate. The site is on flat ground and comprises a single field of pasture. The site adjoins residential land uses in Bovingdon to the north-west and is enclosed by mature tree belts to its north-east and south-east. Overall, the site is judged to perform well on this criterion.” Page 42.

The same report does raise concern with the southern-most parcel as it could represent “*an extension of the existing settlement into open countryside*”. Thakeham would like to draw the Council’s attention to the amended masterplan submitted within the Vision Document, in which the southernmost parcel incorporates a junior football pitch and single storey community scout hut and associated parking. Thakeham is of the view that this proposal respects the report’s concerns.

Site Comparison to Proposed Allocations

A summary of the Council’s assessment of the Site compared to the proposed site allocations is displayed in the table below;

A comparison between the Site and the proposed allocations against the assessment criteria is detailed below.

Biodiversity

As outlined in the Sustainability Appraisal, the proposed site allocations are either adjacent a Local Wildlife Site (Grange Farm) or within “a high value local biodiversity wildlife corridor” (Chesham Road and Molyneaux Avenue – page 277). The Site is located in a less-sensitive biodiversity area and will deliver biodiversity enhancements on site and should therefore be

marked

Water

Thakeham has committed to working towards water neutrality. Based on these commitments, the Site should be marked

Flood Risk

Unlike the two proposed allocations in Bovingdon, the Site is not at risk of surface water flooding. Given the extent of surface water flood risk of the proposed site allocations as set out in the Council’s own evidence base, Thakeham is of the view the other sites should be marked . As the Site is

in Flood Zone 1 with no surface water flooding risk, it should be marked

Soils

Grange Farm and the Site have been assessed as “” against the soils criteria on the basis that both sites have been identified as ‘Grade 2’ on Natural England’s map. Thakeham raises concern with the evidence used to assess the sites, as the map does not go into sufficient detail and that other factors as outlined above need to be considered.

Due to the size of the Site and its proximity to existing an residential area and the village centre, even if the land was assessed to be of Grade 2 quality, the loss of land at the Site would not significantly harm national, regional or local agricultural interests. Based on the above, Thakeham is of the view that the Site should be marked .

Due to the size of the Grange Farm site this would lead to a larger scale loss of potentially higher grade agricultural land and as it is both a larger piece of land and further from the existing village centre of Bovingdon, it be a greater loss of agricultural land. Therefore, Thakeham is of the view that

Grange Farm should remain

Resource Efficiency

As referred to above Thakeham has publicly committed to reducing construction waste, working towards a circular economy. Based on

Thakeham's commitments, the Site should be marked

Historic Environment

Given the scale of the proposed development at Grange Farm and that there is a Grade II Listed Building (White Hart Cottage) in close proximity to its north-west boundary, Grange Farm should be assessed as 'poor' as its development will have an impact on the setting of the Listed Buildings. Given the evidence above regarding archaeological risk on Chesham Road/Molyneux Avenue, the site should also be marked 'poor' based on its proximity to the historic Bovingdon Airfield and risk of archaeological

remains (prehistoric and Roman) being on-site.

Landscape/ Townscape

Whilst Thakeham notes all sites are in the Green Belt, the Site has been assessed to make a weak contribution to the purposes of the Green Belt and is visually well contained with strong defensible boundaries. The Site adjoins residential land uses in Bovingdon to the north-west and is enclosed by mature tree belts to its north-east and south-east. Given the sensitivities of the Green Belt designation, Thakeham is of the view the Site's assessment should remain 'poor' but is of the view that Grange Farm would lead to a significant encroachment into the Green Belt and wider countryside and should therefore be marked 'poor'.

Health and Wellbeing

The Site is the only site allocation that would deliver tangible health and wellbeing benefits in the short term (given the uncertainty regarding the deliverability of a new primary school at Grange Farm). The Site will provide community space to enable clubs and classes as well as a new football pitch which will benefit the health and wellbeing of the wider village. Thakeham is of the view that as Chesham Road/Molyneux Avenue does not provide any facilities, it should be marked 'poor'.

Sustainable Locations

Whilst all three sites have been assessed the same, Thakeham would like to raise that Grange Farm is located the furthest from the village centre of Bovingdon in the least sustainable location of the site options and therefore is likely to have a higher reliance on travel by private car and generate considerable traffic movements. Thakeham would also point out that the Council's own assessment of Chesham Road/ Molyneux Avenue in the Sustainability Appraisal states the busy road may pose an accident risk and discourage people from walking into the village. On that basis, Thakeham is of the view that Grange Farm and Chesham Road/ Molyneux Avenue

should be marked

Community Cohesion

As Grange Farm is only delivering land for a primary school opposed to a new school, the site should be assessed as as land only will not deliver any community benefit during the Plan period. Thakeham's site, with its new community facilities and improved links to adjacent sports facilities is the only site out of the three that facilitates community cohesion.

Thakeham has demonstrated in these representations that the proposed allocations do not provide as many community benefits as the Land at Fox Meadow. Following the proposed amendments above, Thakeham is of the view the Council's assessment of the sites should be as follows;

Fox Meadow, Bovingdon

Grange Farm

Chesham Road/

Molyneaux Avenue

General Planning Policies within the draft Local Plan

Thakeham would also like to take this opportunity to comment on the Council's Guiding Development policies within the draft Local Plan. Thakeham has commented below on the following policies;

- Policy SP7 – Delivering Infrastructure
- Policy SP10 - Climate Change Mitigation and Adaptation
- Policy DM2 – Affordable Housing

- Policy DM8 – Custom and Self Build Housing
- Policy DM10 – Accessible and Adaptable Homes
- Policy DM23 - Energy and Carbon Emissions Reductions in New Development
- Policy DM22 – Sustainable Design and Construction
- Policy DM36 – Tree Retention and Protection
- Policy DM41 – Height of Buildings

QUESTION: Sustainability **Water availability Appendix C17**

Appraisal comment

The comment reflects the concerns residents have about the aquifer and abstraction, set out in stark terms:

“Context: In 2014/15 the household water use in Dacorum was estimated to be 151.97 litres per head per day which was one of the highest within the county compared to other districts.

Groundwater resources are now at or approaching full utilisation, and many rivers and streams including the Bulbourne, Gade and Ver suffer from unfavourable flow conditions due to climate change causing heavy rainfall and long dry spells which detrimentally impacts upon water quality and creates pressure on underground drainage systems. The Chilterns Chalk Streams are particularly susceptible to over abstraction and urban pollution. The Catchment Abstraction Management Strategy (CAMS) for the Colne catchment (Environment Agency, December 2007) identified that the underlying chalk aquifer is assessed as being ‘over-abstracted’.

In terms of waste water treatment capacity the Study identified that the main outcomes from the evaluation of need for Dacorum were as follows: “Any development within the Upper Gade catchment by 2031, northwest of Hemel Hempstead, could significantly impact water quality and require sensitive planning; The indicative development areas around

Berkhamsted are likely to require strategic intervention from 2031 onwards to accommodate the scale of projected growth within the Berkhamsted STW catchment; The evaluation indicates a large degree of uncertainty in 2051, with the high scenario demonstrating strategic intervention could be required across the district (mainly to improve STW capacity). This scale of intervention could require adoption of local planning policies and / or construction methods to limit foul flows and promote large-scale water recycling; and Focusing growth proposals on Hemel Hempstead could provide a greater number of unrestricted opportunities, utilising the capacity of the existing system and relieving pressure on Berkhamsted”.

Option E (1,100dpa)

x

Providing 1,100 dpa would put additional pressure on water resources when compared to the housing levels proposed under Options A-D. As for those other options, this level of growth could cause issues with potable water supply, with the effect being likely to become even more acute over time as more dwellings are build and the risk of periodic water shortages increases.”

This is a strong indicator about the need to plan for a key infrastructure requirement: the 2031 horizon is barely mid-way through the Draft Plan period. It will not be enough to rely on assumptions that utility providers will deliver under their statutory obligations.

Landscape C27

“Option D requires development of a new settlement in one of two potential locations which would alter the landscape of a part of the borough, in a manner that would be irreversible. The significance of the effects will be dependent on layout and design, including how the settlement is intergrated into the existing landscape. Significance will also depend on how the new settlements would affect the setting of the Chilterns AONB.”

While the term ‘irreversible’ is explicitly recognised for this Option [large scale release of Green Belt], this and the adverse impact on AONB is only implied where loss of Green Belt is proposed for other Sites.

“Context: Hertfordshire’s Traffic and Transport Data Report 2018 identifies that traffic within the Borough is forecast to increase by 6% by 2021 from 2017 levels and by 17.4% by 2031.

Mainline rail is a good travel option for Dacorum, with access to four stations: Apsley, Berkhamsted, Hemel Hempstead and Tring. There is also a station in Kings Langley that, although it falls outside of the administrative area of Dacorum, serves existing communities in the area.

There is also a good level of bus services in Hemel Hempstead where the network is generally well developed and an adequate level of service in other locations. Markyate is an exception where bus transport is considered unreliable and poorly intergrated with other larger local towns in the borough. A key issue that has been identified is that bus services are not adequately linked between Hemel Hempstead rail station, Maylands and Hemel Hempstead town centre.

A high frequency bus service (no.500) links the settlements of Tring, Berkhamsted, Hemel Hempstead and Kings Langley with other major settlements, including Watford and Aylesbury.”

We comment above:

The bus route 500 operates as a commercial service by Arriva at a frequency of 3 buses per hour on Monday-Friday, 2 buses per hour on Saturdays and 1 bus per hour on Sunday shopping hours. There is no evening service or early service on Saturdays. Due to its length, it also suffers from reliability issues. Despite fulfilling the criteria of a “good public transport service” in the Topic papers, there is a paucity of services in other directions from Berkhamsted. We do not agree that a sustainable transport network is in place in Berkhamsted.

The following abstracts from the site assessments show a common theme –

- the distance from the town centre,
- the gradient serving to discourage walking or cycling,
- absence of alternative public

Also their proximity to the A41 - its ambient and peak noise levels may have an adverse effect on Health and Wellbeing to residents unless effective mitigation measures are adopted.

The Attachment with this reply suggests that transport routes should be defined from the outset to encourage residents to use public transport in preference to private vehicles.

QUESTION: Evidence Base comment	GENERAL COMMENT: There are nearly 130 documents under this heading it would take a month of Sundays to read, let alone take in all the information. Randomly selecting some files I have found files having between 69 up to 131 pages, with a quick calculation on averages that would mean going through a approximately 13,000 pages. That's about 5 times larger than the Brexit agreement. I feel that a ref in the previous sections, to the specific files would help people get a better understanding of this section of the document. So I cannot say whether the information is relevant or not

QUESTION: Evidence Base comment	This plan seems to be based on out of date data such as 2014 ONS household projections and a water scoping study produced in 2010. It also does not account for the effects of the ongoing pandemic, the repercussions of which in terms of economic and social wellbeing and climate impacts are likely to be great and the plan will need to be updated and amended once the extent of these are fully known.

QUESTION: Evidence Base comment	You are ignoring evidence that does not fit your desire to build. You are basing your plans for the type of development on outmoded ideas of the way that people lived 20 years ago and certainly not since the start of this century. a thriving town centre is no longer a valued space, but local shopping, hospitality and recreational facilities are. Access to the countryside has proven increasingly popular - to the extent that local farmers are complaining about too many walkers - yet you plan to remove countryside and massively increase the numbers of people accessing the remaining fragments. This isn't simply an issue because of the extra housing planned in DBC but also the extra housing in many villages (Aston Clinton, Halton) and towns (Princes Risborough) within 5 miles of the DBC boundary.

QUESTION: Evidence Base comment	<p>The Evidence Base is either inadequate in several areas, not fully up to date, or presents significant data that are not explicitly addressed in the Local Plan.</p> <p>Topic Papers. Chilterns Beechwood SAC Summary and Appendices 1 to 26 https://www.dacorum.gov.uk/docs/default-source/strategic-planning/topic-paper-for-the-chilterns-beechwoods-sac-summary-of-evidence.pdf?sfvrsn=d9da0c9e_4</p> <ul style="list-style-type: none"> Extensive evidence is presented about the significant importance of SSSIs and other protected areas. More than any other town in Dacorum, Tring is surrounded by SSSIs and other important wild spaces (5 out of 9 Dacorum SSSIs border Tring with a sixth just outside in Buckinghamshire). However, in the Local Plan special attention is given only to the Ashridge portion of the Beechwood SAC.

- Appendices 25 and 26 are provided by the Woodland Trust. The significance of this land (which actually contains three SSSIs and not the one implied in the overarching document) and the impact of proposed developments are not reflected in the LP. There is also no consideration given to the adjoining woodland in Buckinghamshire.

Topic Papers. Site Selection section 2.20

- Where it has been concluded that land is required to be released from the Green Belt, the NPPF makes clear that compensatory improvements must be made to the environmental quality and accessibility of remaining Green Belt land.
- There is NO explicit reference to how this will be achieved in the Local Plan.

QUESTION: Evidence Base comment	Growth predictions by ONS have reduced between 2014 and 2018; one might surmise that Brexit and an international pandemic will have reduced growth rates further. Indeed, the birth rate has been falling steadily since 2012 when it peaked at 1.93 (2.1 is required to maintain a steady population) and is now down to 1.60 in England, and even lower in Scotland. This doesn't necessarily mean the population is falling, because older people are living longer, but if you factor in a Brexit brain drain which has already started, the return home of many EU nationals (also already started) and the Government's policies on immigration, then one might possibly anticipate that we will follow the trend in Spain, Germany, Japan etc. where populations are falling. This may not fit in with Governments 'build, build, build' message to the public, but DBC have a responsibility to the Borough and its residents, both current and future, to build the right homes in the right places. The first step in that is exploring what constitutes the true need of the Borough and the true ability to fulfil that need within the constraints of the Borough, including Green Belt as dictated by the NPPF. This surely needs to be

carried out prior to determining the required number of residential property units as part of the growth plan . In addition, DBC have not considered the effects of the current pandemic within their evidence base for this local plan.

I would have expected that the evidence base is absolutely the right place for DBC to challenge the Government numbers and the methodology and this does not seem to have been undertaken as part of this Local Plan.

QUESTION: Evidence Base comment	<p>Growth area TR06 – off Brook Street Tring</p> <p>TR06 comprises Tring Market Auctions, The Tring Local History Museum, the Fire Station and Forge Car Park.</p> <p>Tring Market Auctions is located at the rear of the site of TR06 with access from Brook Street and a license to access the Forge Car Park.</p>

The ownership of the site is divided between Tring Town Council (Auction Rooms, Museum and the Market Place *hardstanding area*), Dacorum Borough Council (Forge Car Park) and Herts County Council (The Fire Station). The Freehold ownerships make it a somewhat complicated issue should planning proceed.

In the proposal, no mention has been made for Tring Market Auctions to be included in the future plans of TR06, but mention has been made that if the site is re-developed Tring Market Auctions would be offered an alternative site in the town – where? The Auctions currently comprise about 16000 sq ft of buildings alone together with the adjoining parking areas. No detail has been provided and no mention of re-location provisions has been made. It appears the proposals are an afterthought to the Dacorum local plan. Tring Market Auctions occupy under the terms of a lease with Tring Town Council.

The History and Current use of the Site

In 1893 under the requirements of the Board of Agriculture and with the assistance of Lord Rothschild, the sale room with office was constructed in Brook Street. It was let to W Brown & Co. who conducted the first sale by auction in January 1894, since when auctions and sales have been held continually on the site for over 125 years – surely this qualifies the location to be part of Tring's heritage.

During recent years from 1960 there has been numerous enquiries and planning applications to develop the site with offices and supermarkets together with residential, all of which have been rejected.

In 1993 the livestock auction ceased to operate leaving the chattel auction business to continue and flourish under the directorship of Stephen Hearn who took Tring Market Auctions to become independent and grow into the fine company it is today.

It now has an extensive complex of four Auction Rooms, forming one of the largest and best known venues of its type in the Home Counties.

The sales attract a very large number of vendors and buyers from Tring and the surrounding towns and villages together with an ever-growing number of people from throughout the Home Counties and Internationally. Many of the buyers represent the trade and other specialist collectors in all categories.

The auctions provide a friendly and entertaining atmosphere on sale days making it an enjoyable venue for both business and pleasure. Regularly around 500 visitors attend on viewing and sale days, many of these attending the auction visit the town shops and local attractions.

Tring Market Auctions is a unique and key component of the town's economic town centre fabric. It provides a key fulcrum for maintaining the town centre economic sustainability. Visitors to the auctions provide business for other local shops and enterprises not just on sale days but across all the sites activities, its town centre location is fundamentally linked to many other local business and the town market continued sustainability.

The auction rooms provide a unique component part of maintaining Tring Town Centres' viability and supporting Tring based economic development. If Tring is expected to grow then business, jobs and economic infrastructure growth needs to be matched, Tring Market Auctions needs to be maintained as it supports this economic ambition of the Local Plan

through continued town centre provision of a business that is complementary to local shops and does not provide competition, as would the proposed supermarket.

The Saleroom operates with a permanent staff of some 20 people which includes consultants and additional part time staff during sale days. The venue is a key local employer, bringing training and development and job opportunities for local young people.

The Auction sales deal with all periods of furnishings and collectables, processing over 50,000 lots each year providing an effective and affordable house furnishing option for many local people. It has a growing importance as a recycling centre, particularly when it is estimated over 20 tonnes of furniture timber is recycled every fortnight, which supports the climate ambitions in the Local Plan.

In addition the Auction provides a key income stream to the Town Council reducing precept impact on local residents and contributing to a sustainable model of local government

The Auction provides a service to both the local community and professional organisations throughout the Home Counties and beyond.

Points of Consideration

- It is positioned on a site with a long history of auctions and marketing of stock
- It is an important asset for the Town
- The auction attracts a large number of visitors to Tring throughout the year
- It employs local townspeople
- Town Centres should reflect the distinctive characteristics of a Market Town
- The site would not lend itself as a supermarket, particularly when this proposal is unproven
- The Auction Rooms occupy a strategic position at the head of an open space and wildlife corridor which runs from the Tring Park Mansion vista through to Icknield It is very much part of the local community, supporting many of the Town's organisations and groups

Planning Matters for Consideration

- Brook Street has a notorious reputation for being dangerous in parts where it is very narrow making it often difficult for vehicles to pass
- Tring High Street has introduced traffic calming measures
- It is suggested in the development plan that a supermarket would be served with a new carpark. Bearing in mind the development would include the existing Forge Car Park, does one interpret this as denying the town parking facilities
- Recently, two large planning applications have been refused in Brook Street both in close proximity to TR06, one being the residential re-development of Market Garage and the introduction of a residential development on the North Eastern side of Silk Mill works. In both instances, the reason for refusal included over-development of the respective sites and the dangers of access to Brook Street
- The plan proposals to create new food and drink leisure uses is difficult to understand when there are currently so many retail outlets available in Tring

- It states that any re-development of the site would only be permitted once replacement facilities are provided elsewhere in the town. The only specified new location is in Growth Area TR01 (Dunsley Farm) for the Fire and Rescue There is no detail with regard to the siting of Tring Market Auctions, nor the Local History Museum.
- One can create new buildings but one cannot create history

TR06 is not a redundant site, it forms and important part of Tring Town Centre with Tring Market Auctions and the local Museum providing both business and pleasure to hundreds of people throughout the year.

<p>QUESTION: Evidence Base comment</p>	<p>4.6. The Green Belt in this Borough has been subject to a number of reviews and assessments over recent years. ‘Stage 1’ was carried out in November 2013 by SKM for Dacorum Borough Council, St Albans City and District Council and Welwyn Hatfield Borough Council. Since then, Arup has been commissioned by Dacorum to carry out 2 reviews of Green Belt in the Borough. These were the:</p> <ul style="list-style-type: none"> • ‘Stage 2 Green Belt Review and Landscape Appraisal Report’, which was published in December 2016 (referred to here as the ‘Arup 2016 Report’); and • ‘Stage 3 Green Belt Review - Final Report, 27 August 2020 (referred to here as the ‘Arup 2020 Report’). <p>4.7. Stage 1 Divided the Green Belt of the subject Councils into ‘parcels’ and assessed how well each ‘parcel’ was meeting the 5 Green Belt purposes. The relevant ‘parcels’ for this part of Dacorum were GB03 (“<i>Green Belt Land South West of Tring</i>”) & GB04 (“<i>Green Belt Land North of Tring</i>”).</p> <p>4.8. GB03 - In summary, in respect of this ‘parcel’, the report found that it was making a: “Significant contribution towards preserving the setting of Tring and Tring Park. Partial contribution towards preventing merging (providing strategic gap between Tring and Berkhamsted) and maintain the existing settlement pattern. Overall the parcel contributes significantly towards 1 of the 5 Green Belt purposes”.</p> <p>4.9. In particular it was found that overall, this ‘parcel’ performed a ‘significant’ role in “<i>preserving the setting and special character of historic towns</i>” (however, an element to the west of the ‘parcel’, what subsequently became allocation LA/5 in the previous ‘Site Allocations Plan’, could be released without harm to Green Belt objectives).</p> <p>4.10. GB04 - In summary, in respect of this ‘parcel’, the report found that it was making a: “Significant contribution towards preventing merging (providing strategic gap between Tring and Berkhamsted) and safeguarding the countryside. Partial contribution towards preserving the setting of Dudstell. Overall the parcel contributes significantly towards 2 of the 5 Green Belt purposes” (The two ‘significant’ purposes being: “<i>preventing neighbouring towns from merging</i>” and assisting in “<i>safeguarding the countryside from encroachment</i>”).</p> <p>4.11. Stage 2 - Further detailed assessment of Dacorum’s Green Belt was carried out by Arup and the Borough was further divided into ‘sub -areas’. The allocations at New Mill and East of Tring fall into ‘sub -areas’ TR-A2 & TR-A3 for the purposes of Arup’s 2016 assessment. The land at Dunsley Farm was given the ‘sub-area’ address of TR-A5.</p> <p>4.12. Table 5.2 “<i>Overall Categorisation of Sub-Areas following Purposes Assessment</i>” found that both sub-areas TR-A2 & TR-A3 were “<i>Strongly Contributing</i>” to the “<i>Strength of Green Belt against NPPF Purposes</i>”. Whilst the overall contribution of sub-area TR-A5 to Green Belt purposes was assessed as “<i>moderate</i>”, there were many sub-areas in other parts of the Borough, such as Kings Langley and the Bovingdon Airfield where the contribution to Green Belt objectives was considered to be either “<i>weak</i>” or “<i>weakest</i>”. Only relatively small portions of TR-A2 (broadly equating to the New Mill allocation) and the northern sector of TR-A5 (the allocation at Dunsley Farm) were found to include elements of ‘weaker’</p>

Green Belt, where some boundary amendments might therefore be considered without compromise to wider Green Belt objectives.

4.13. In respect of Sub-area TR-A3 specifically, Arup's 2016 report found: "*Purpose 1 - As a result of the highly open character of the sub-area with few defensible boundaries to contain development, its release would constitute outward sprawl of the large built-up area of Tring beyond its hard edge. It may also compromise the ability of surrounding Green Belt to meet this purpose.*

Purpose 3 - The whole of the sub-area retains an unspoilt, open and rural character and its release would represent severe encroachment into the countryside. It would also reduce the ability of surrounding Green Belt to meet its purposes.

4.14. Furthermore, the Arup study determined that, for part of TR-A2 and all of TR-A3 (the northern and southern parts of what is now allocation Tr03 of the Emerging Strategy): "*the majority of the sub-area is constrained, being classified as Grade 2 Agricultural Land*" and "*Almost the entire sub -area is constrained, being classified as Grade 2 Agricultural Land.*

Additionally, the south western corner, and eastern boundary – *Grand Union Canal* – are designated Local Wildlife Sites. The western boundary is an Area of Archaeological Significance"

(Annex Report 3 - Non-Absolute Constraints Proformas, pages 62 & 64).

4.15. As a result, the 2016 Arup Report reached the unequivocal 'Conclusion' that redesignating the Green Belt in relation to sub-area TR-A3 "*would compromise the ability of the wider Green Belt to meet its purposes*". It then recommended that the sub-area be "*exclude[d] from further consideration*" (Page A19, Arup Stage 2 'Green Belt Review and Landscape Appraisal Report' - Published December 2016).

14/cont

4.16. **Stage 3** – this Stage of the Green Belt Review assessed the potential housing and employment site allocations and advised upon any boundary revisions that might be necessary around the six main settlements including Tring. Arup also carried out "*a complementary but parallel work stream assessing landscape / visual impacts of the potential housing and employment sites....*" (see below).

4.17.

Arup 'Dacorum Borough Landscape Sensitivity Study' of April 2020 (the version available from the Council's website is marked 'Draft') – This document also considered the various Green Belt releases around Tring and assessed their "*sensitivity to change*". Dunsley Farm, New Mill (and Land south of Gannel Farm Bulbourne Road' which has not been allocated in the emerging plan) were all considered to be 'moderately' sensitive to change, whereas the 'Land to the East of Tring' was assessed as being "*Moderate-High*" in its sensitivity. The draft Study explained that this latter rating was "*primarily a result of the intervisibility with the Chilterns AONB, large area of open agricultural land and lack of intrusive urbanising influences which creates a high scenic quality*".

4.18. In the assessment of "*Overall landscape sensitivity*" (see page 206 'Dacorum Borough Landscape Sensitivity Study

' - Draft Report April 2020) the report found: "the parcel is assessed as having a Moderate *-High overall sensitivity to change arising from residential and mixed- use development. This is due to the landscape's level of susceptibility and the fact that the parcel provides a setting for the Chilterns AONB.*

The landscape sensitivity in the fields of Marshcroft Lane south is also assessed as having Moderate-High sensitivity to change, but for different reasons to the rest of the parcel.

There is reduced intervisibility caused by the lower and flatter topography and surrounding vegetation but there is a more intricate field pattern so is more sensitive in terms of scale, pattern and cultural pattern compared with the land north of Marshcroft Lane".

QUESTION: Evidence Base comment	<p>See response to Question 8</p> <p>PLEASE READ PDF ATTACHMENT TO SEE IMAGES AND MAPS IN THE CONTEXT OF THE FULL RESPONSE - TEXT RESPONSE ONLY IS SHOWN BELOW</p> <p>GREEN BELT BOUNDARY -REAR OF CONISTON ROAD KINGS LANGLEY</p> <p>This submission is in relation to the position of the Green Belt boundary to the rear of houses in the lower/eastern part of Coniston Road Kings Langley.</p> <p>See proposals map extract.</p> <p>The boundary line, this submission refers to, is as described by DBC consultants Arups on their drawing below, as line KL.E</p>

We do not agree with DBC's proposal to leave the GB boundary line unchanged.

The current GB boundary is an anomaly; it follows an arbitrary undefined line along a boundary that has no permanence.

The current boundary does not serve any of the 5 purposes that apply in the GB and the boundary should therefore be amended to the logical, permanent and defensible position at the end of the gardens, which are clearly all within the built up village of KL. The new boundary would follow the mature edge of the countryside.

In assessing the GB line at KL.E the consultants state in their conclusion below that "The Green Belt boundary is not demarcated by any physical features; it cuts across residential gardens.."

In their written analysis the consultants accept that para 139 of the NPPF states that "GB boundaries should be defined clearly, using physical features that are readily recognisable and likely to be permanent"

So by their own analysis they have confirmed that this is not the case, and therefore the fact that they then go on to reject any change is inappropriate.

Para 139 of the NPPF also states that "they must be defensible and well justified to be maintained in the long-term, beyond the lifetime of the plan"

There is no such justification in this case.

Despite the above, the consultants propose no change, as they have stated that there are no apparent "exceptional circumstances".

We do not agree with this being required as a justification. The land is not being proposed as a housing allocation and as stated above, it is simply the case that the current boundary does not comply with Para 139 and does not fulfil any of the 5 purposes.

The consultants accept that para 134 of the NPPF states that for retention of GB land it must meet the 5 purposes.

The 5 purposes are set out below and it is totally clear that the GB in this location does not meet any of these.

If the line was moved to the correct location at the end of the gardens it would then sit rightly at the edge of the countryside and fulfill some of the criteria below.

When seeking to justify if the land meets any of the 5 purposes the consultant has looked at the existing pattern of development and whether the absence of the GB line would lead to a proliferation of householder development "in a way that would harm the permanent openness of the countryside" This is not the same as any of the 5 GB purposes so is an incorrect analysis.

In any event, a change in the boundary line as we propose, would not change anything. PD is allowed in the GB and there are already large modern ancillary structures within the GB within the rear gardens of some properties as per the images included at the end of this submission. So the boundary line change would not make any difference.

Consultants have accepted in all DBC studies that the current GB line is not in a permanent location and slices randomly through gardens at an undefined point.

All reports accept that the whole of the length of the gardens are undoubtedly within the village settlement.

DBC consultants also tested sites to the west and north of the gardens as per the plan below, for potential housing allocations.

The comments below regarding the eastern boundary of site 94, which immediately abut the subject land, make the position clear.

Site 94 above was concluded by the consultants to be potentially suitable for allocation but ultimately not carried forward.

The plan below for site 94 clearly shows the rear garden line of the Coniston road homes to the East.

As for site 88, to the north, which was also tested, the conclusion again, below, clearly accepts that the entire length of gardens are within the “built-up area” of KL.

In conclusion the current GB boundary is simply in the wrong place, it is an anomaly.

It is not permanent nor defensible.

It is within the built-up area of KL.

It does not satisfy the 5 GB purposes.

Exceptional circumstances are not required, it is not being proposed as a housing allocation, it is just in the wrong place.

The boundary should be moved to follow the permanent defensible line at the end of the gardens adjoining open countryside.

Images are included below to illustrate the above points.

VIEWS SHOWING WHERE A PERMANENT, DEFENSIBLE BOUNDARY SHOULD BE, WITH COUNTRYISDE AT REAR

(NOTE: REAR FENCE ON RHS IMAGE IS NOT ON GB BOUNDARY LINE, THE STRUCTURES & FENCE IS BEYOND THE LINE)

GREEN BELT BOUNDARY LINE IS COMPLETELY UNDEFINED

QUESTION: Evidence Base comment	GL Hearn, South West Hertfordshire Local Housing Needs Assessment clearly states that Dacorum has no need to build more housing in addition to the developments already underway. Talk ever increasing growth is outdated and unnecessary. Since the Brexit Referendum, the population of Britain is estimated to have fallen by one million. The full impact of COVID-19 on work and retail habits has yet to be assessed. Dacorum should be focussing on repurposing empty shops and offices rather than looking for building sites on Green Belt.

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment

There is no doubt that the evidence base is extensive and very, very weighty. Certainly, DBC have produced more material than any respondent could possibly digest within the time frame of this consultation.

Many members of BRAG believe the whole process is deliberately weighted against their inclusion, a belief exacerbated by being overladen with material/evidence that has little bearing on the process and conclusions, while it also offers no evidence that DBC have done anything other than dismiss their views expressed in the last Issues And Options consultation.

Nearly 95% of respondents to the 2017 consultation didn't agree with the proposed approach to Green Belt and Major development sites. Yet, despite the sheer amount of reports supplied, there is precious little evidence that DBC have explored how to give the Borough's Green Belt the protection that the NPPF demands.

BRAG produced its own Green Belt report (Berkhamsted Town Council adopted and forwarded to DBC), but despite claiming to engage the Community (a claim repeated in this Plan) DBC ignored BRAG's submission in favour of desk-based reports compiled by consultants who had no knowledge of the area. BRAG's report clearly identified confirmation bias throughout the reports.

Confirmation bias exists throughout DBC's evidence base. In simple terms, a question is asked and consultants formulate reports to confirm the required answer.

In this case, the question mostly revolves around how to provide a plan that facilitates a housing target supplied by Government, rather than asking what is an appropriate target for the Borough? There is absolutely no attempt to provide evidence that the Government numbers are right or wrong for Dacorum, despite 95% of the residents clearly telling DBC the numbers were wrong in the 2017 consultation.

The evidence base is absolutely the right place for DBC to challenge the Government numbers and the methodology, but they make no attempt to do so.

The 2016 South West Hertfordshire Strategic Housing Market Assessment (SHMA) identified a housing need of 756dpa for Dacorum, but that was dumped in 2020 SHMA for the 1023dpa based on the Governments Standard methodology, which is based on national requirements rather than local needs.

That 1023dpa was then replaced for this consultation with 922dpa target based on a Government algorithm that later discredited and dubbed the 'mutant algorithm'. The reason the 'mutant algorithm' has been dropped since the publication of DBC's plan is because it was challenged.

The evidence base is absolutely the right place to challenge the Government algorithms and numbers and why excessive houses cannot be accommodated in Dacorum.

DBC are now likely to claim they must accept 1023dpa, but like the 'mutant algorithm' the Standard Method needs challenging – it employs an affordability coefficient to 2014 ONS data.

The NPPF requires the latest data to be used so it is illogical that the Government should enforce numbers based on out-of-date data. The 2018 ONS based projections represent the latest data and if the Standard Methodology is applied to the latest ONS growth predictions, Dacorum's housing need would be calculated at 497dpa.

Growth predictions by ONS have reduced between 2014 and 2018; one might surmise that Brexit and an international pandemic will have reduced growth rates further. Indeed, the birth rate has been falling steadily since 2012 when it peaked at 1.93 (2.1 is required to maintain a steady population) and is now down to 1.60 in England, and even lower in Scotland.

This doesn't necessarily mean the population is falling, because older people are living longer, but if you factor in a Brexit brain drain which has already started, the return home of many EU nationals (also already started) and the Government's policies on immigration, then one might possibly anticipate that we will follow the trend in Spain, Germany, Japan etc. where populations are falling.

This may not fit in with Governments 'build, build, build' mantra, but DBC have a responsibility to the Borough and its residents, both current and future, to build the right homes in the right places.

The first step in that is exploring what constitutes the true need of the Borough and the true ability to fulfil that need within the constraints of the Borough, including Green Belt as dictated by the NPPF. DBC have palpably failed to do this.

Nor have DBC considered the effects of the current pandemic within their evidence base, despite request from many community bodies and organisations, such as BRAG, who also requested a delay to this reg 18 consultation to give DBC more time to do so.

BRAG has highlighted worries and discrepancies about the way DBC have handled windfall calculations (see sections 5,7 and 25). DBC state their windfall predictions *“have been calculated using historic delivery rates and expected future trends. We believe it is justified based on past local evidence and is a reliable source of supply across the Plan period.”*

However, the last 14 year average for windfalls have come in at 306.2dpa (346.3dpa over the last 5 years) and there is no justification or evidence presented to suggest the Council should lower future windfall projections to 133.8dpa (asper Table 2) from either the 14 year or last 5 year averages, especially considering evidence of changing working practices post-pandemic.

Despite its excessive bulk, the Evidence Base that accompanies the Plan is clearly not adequate, up-to-date and relevant for Dacorum’s needs.

BRAG’s members also disturbed by the inaccuracies within the main consultation document, specifically the highlighting of land as open space that has already been developed and giving a large private garden open land status.

BRAG understands that technically all sports fields are ‘open land’, but it is stretching the definition to include a private garden, private tennis courts, fully enclosed private football pitches and school grounds that cannot be accessed by the general public. BRAG’s members believe the Council are clearly being misleading in trying to indicate there is more Open Space within the town than there actually is.

QUESTION: Evidence Base comment	<p>I do not believe that the Evidence Base is up to date or accurate.</p> <p>The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.</p> <p>The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.</p> <p>The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.</p> <p>Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date 2018 data.</p>

QUESTION: Evidence Base comment	<p>One look at the vast number of documents and schedules under the heading "Single Local Plan Evidence Base" suggests it is an exercise in obfuscation. I have no intention of attempting to read it unless it is presented in a coherent summary form with the key areas highlighted. This does not give confidence in the transparency of the consultation process.</p>

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment	<p>Managing Development in the Countryside: I am particularly concerned that the evidence base for there being exceptional circumstances that permit land to be taken out of the Green Belt is not adequate.</p> <p>Housing Delivery: the evidence base for the numbers of homes required across the area is unlikely to be future proof given the likely societal and economic changes emerging post pandemic. In these circumstances the assault on the Green Belt cannot be justified in terms of meeting the housing numbers being put forward.</p>

QUESTION: Evidence Base comment	See my other responses. I do not accept your justification for the overall housing target and there is no evidence to support your removal of up to 850 hectares of Green Belt within the context of the NPPF which requires evidence of 'exceptional circumstances'. The Housing Minister in 2016 said that this cannot be met by housing need alone.

QUESTION: Evidence Base comment	<p>I have been informed from a number of sources that the Evidence Base is neither up to date or accurate.</p> <p>The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.</p> <p>The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.</p> <p>The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.</p> <p>Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date 2018 data.</p>

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p>

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	<p>The evidence base that has been produced by the Council is detailed. We have no specific comments to raise at this stage and await the publication of the Habitats Regulation Assessment in due course which forms a key component of the evidence base and the approach to the spatial strategy.</p> <p>Across a range of key evidence base documents (Landscape Sensitivity Study, Green Belt Study, Site Selection Paper, Sustainability Appraisal) the site performs well, scoring consistently with those sites that have been allocated in the plan. From the evidence that has been collated on Hill Farm it would be justified on the evidence to allocate the site for development.</p>

QUESTION: Evidence Base comment	<p><i>While the Local Plan uses the PPS 2019 (which is required by the NPPF) as part of its evidence base it does not follow the strategic advice and guidance offered within the strategic elements of the PPS.</i></p> <p><i>For example, the PPS states:</i></p> <p>“OBJECTIVE 2 - To enhance outdoor sports provision and ancillary facilities through improving quality and management of sites.</p> <p>Recommendations:</p> <ol style="list-style-type: none"> 1 Improve quality 2 Adopt a tiered approach (hierarchy of provision) to the management and improvement of sites. 3 Work in partnership with stakeholders to secure funding 4 Secure developer contributions.” <p><i>- and -</i></p>

“The PPS should be used to help determine the likely impact of a new development on demand and the capacity of existing sites in the area, and whether there is a need for improvements to increase capacity of existing provision or if new provision is required. Where a development is located within access of existing high-quality provision, this does not necessarily mean that there is no need for further provision or improvement to existing provision, as additional demand arising from the development is likely to result in increased usage (which can result in overplay or quality deterioration).

Where it is determined that new provision is required to accompany a development, priority should be placed on providing facilities that contribute towards alleviating existing shortfalls within the locality. To determine what supply of provision is provided, it is imperative that the PPS findings are taken into consideration and that consultation takes place with the relevant NGBs. This is due to the importance of ensuring that the stock of facilities provided is correct to avoid provision becoming unsustainable and unused, such as single grass pitch football sites without adequate ancillary facilities or new cricket/rugby grounds located away from existing clubs. Instead, multi-pitch and multi-sport sites should be developed, supported by a clubhouse and adequate parking facilities which consider the potential for future AGP development.

The Council should look to include priority projects from within the PPS Action Plan for inclusion within its Infrastructure Delivery Plan as a mechanism of ensuring that CIL receipts are identified towards appropriate projects for sport.

To support the implementation of this recommendation, KKP has prepared a developer’s contributions guide for playing pitches (provided separately to the Council). The guide should form the basis for negotiation with developers to secure contributions to include provision and/or enhancement of appropriate playing fields and subsequent maintenance. “

- and –

“**OBJECTIVE 3**

To **provide** new outdoor sports facilities where feasible and there is current or future demand to do so.

Recommendations:

- 1 Identify opportunities to add to the overall stock to accommodate both current and future demand.
- 2 Rectify quantitative shortfalls through the current stock.“

- and –

“**HOUSING GROWTH SCENARIOS**

Experience shows that only housing sites with 600 dwellings or more are likely to generate demand for new provision to be created. For large scale developments, it is likely that demand will be potentially generated for larger sports such as football and/or cricket. Consideration should be given to providing multi-pitch sites with suitable ancillary provision, including appropriate clubhouse/changing facilities and carparking. Single pitch sites which have been provided traditionally by developers are not considered to provide long term sustainable provision for pitch sports.“

Indoor Facilities

Overall Comment:

The key evidence for assessing Indoor Sports and Leisure Facility requirements in the Borough are the DBC Indoor Leisure Facilities Assessment 2019 and the Leisure Facilities Strategy 2019.

NB The total population of Dacorum was 153,316 in 2017. This statement and the entire DBC Indoor Leisure Facilities Assessment 2019 (and Leisure Facilities Strategy 2019) base projected growth to 2036 on ONS statistics at the time of just 13.6% (an additional population of 20,680 residents). The numbers now proposed in the Emerging Strategy for Growth are for an increase of more than double this; and HGC will add further significant growth Therefore the data in the key evidence offered for Indoor Sports Facility demand and new facility development is seriously under-estimated – which is true for all the following extracts on indoor sports and leisure activities.

The DBC Indoor Leisure Facilities Assessment 2019

The following extracts from this key piece of evidence for the plan all show a need for increased provision of Indoor Sports Facilities across the Borough and especially for Sports Halls and Swimming Pools – with an increase in demand that is severely understated as shown above.

The Assessment states on the Projected Housing Growth:

“Pg 27 The anticipated level of housebuilding to 2036 will, undoubtedly, place additional pressure on local sporting infrastructure at all levels. In particular, it is likely that the major planned growth in Hemel Hempstead will require additional sport and leisure facilities.”

The Assessment states in its Strategy Summary:

“Pg 106 On confirmation of the proposed housing development for the borough, paying particular regard to the development of Hemel Garden Communities, and in close association with St Albans City & District Council, re-evaluate the sporting needs of the communities, using this needs assessment as the start point.”

“Support gymnastics clubs to identify where and how additional recreational gymnastics can be accommodated, leading to overall increase in levels of participation in the sport. “

“Ensure that all school sports facilities accommodate community use. In particular, ensure that new school sports buildings (e.g. Hemel Hempstead and Tring schools) have appropriate and robust community use agreements in place.“

The Assessment states relating to Gymnastics:

“7.3 Consider making additional provision available at the refurbished leisure centre in Tring.

Larger dedicated facilities are required in the Authority to meet existing demand.

Additional recreational gymnastics provision is needed to meet current demand.

The projected housing growth within the area is likely to lead to increases in demand for gymnastics, particularly at recreational level.”

The Assessment states relating to Health and Fitness:

“6.4 Additional health and fitness provision may be required to accommodate the increased demand caused by projected population growth especially if the popularity of fitness continues to increase. It is highly likely that increased health and fitness provision will be required when the HGC development is brought forward.”

The Assessment states relating to Swimming Pools:

“5.6 By 2036 there will be a need for an additional swimming pool equivalent to 25m x 4 lanes in size.

Investment is required in the pool stock to ensure they remain attractive and fit for purpose. This is particularly the case for Berkhamsted Leisure Centre which requires significant refurbishment or replacement.

Hemel Garden Communities proposes significant development up to 2050. It is unlikely that this demand can be met by current facilities. Therefore, additional supply will need to be considered (dependent upon the chosen development for HGC). “

The Assessment states relating to Sports Halls:

“4.6 Continue to monitor use at indoor sports halls as projected new developments come forward as this will create additional demand for sports hall space, either at established clubs or in the form of different new sports/ physical activity opportunity being developed.

Further assessment will need to take account of the Hemel Garden Communities development as the new homes become a reality. “

“Netball is a key sport in Dacorum, training sessions should be accommodated indoors where possible to meet clubs’ training demand.”

“Badminton England identifies Dacorum as a priority area with a focus on increasing junior activity.”

“Volleyball is identified as a sport for growth, subject to venues having the facility requirements. Any new provision should consider incorporating volleyball fixtures and fittings to facilitate development in this sport.”

Futsal

Comment: Futsal is one of the world’s fastest growing sports. The Football Association has targeted “A defined network of Futsal facilities, covering every County FA” by 2024. Futsal has not been considered or covered in either of the Indoor Sports Evidence Documents but will undoubtedly provide a significant increase the demand upon sports halls in Dacorum over the coming years

QUESTION: Evidence Base comment

I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	Paragraphs 2.11, 5.2 and 5.9 of the Berkhamsted and Tring Sustainable Transport Study state that the study was impacted by COVID-19 with on-site observations made in person replaced by online aerial and ‘streetview’ photography. The report acknowledges that “more detailed observations and measurements [...] are more difficult to obtain using online tools” (Footnote 56: paragraph 5.2, p71: Berkhamsted and Tring Sustainable Transport Study, November 2020). This is something of an understatement as online tools are not able to provide measurements across different parts of the day but rather are single point in time. The study, while nevertheless acknowledging some of the natural constraints in Berkhamsted, underestimates the road congestion at peak times and the challenges in creating a new sustainable

transport network that is an alternative to the car. With more accurate evidence, it would be even clearer that Berkhamsted cannot sustain the level of growth proposed and, moreover, that growth area Bk09: Bank Mill Lane should be removed from the Draft Plan.

As noted in the response to question 5, the south west herts level 1 strategic flood assessment appendices set out in the evidence base do not appear to have been completed but separate analysis from the Government's flood warning information service (Footnote 57: <https://flood-warning-information.service.gov.uk/long-term-flood-risk/map?easting=500462&northing=207091&map=SurfaceWater>) shows there is a high risk of flooding through the centre of the Bank Mill Lane site.

QUESTION: Evidence Base comment	<p>Housing numbers</p> <p>DBC has used outdated (ONS 2014) housing projections, whereas it is required to use the most recent and relevant ONS projections (2018) so I do not agree that the Evidence base is adequate, up-to-date and relevant.</p> <p>Please see Topic Paper 'Development Strategy November 2020': this tracks the history, marshals the data and argues that the dwelling numbers for the Reg18 Plan meets the housing needs for the Borough viz 922 [or recently 1023] pa. I don't believe this is the correct basis for the Plan – which is based on 'national requirements' rather than local needs.</p> <p>The data below is drawn from reliable sources e.g. ONS and the study commissioned by the Districts' Joint Housing Needs Assessment quoted in the Plan.</p> <p>The current dwelling numbers established in the Adopted 2013 Core Strategy sets an annual build rate of 430 pa.</p>

The Data shown in Fig 2 Housing Trajectory 2020 – 2038 [p 38] records anticipated completions across the Borough for 2020/21 as 654 and 21/22 as 1036 . These are **well in excess** of the Core Strategy and also the numbers projected by ONS.

The numbers set for the Draft Plan have been based on the ONS projections of housing ‘need’ but manipulated by a formula adopted by MHCLG to determine the ‘national requirements’ stated in Para 6.7 above.

Dacorum

ONS projection of Dacorum annual housing growth

After adjustment by MHCLG algorithm

After adjustment by MHCLG algorithm

ONS 2014

730

1023 [new standard applied]

ONS 2018

355

922 [mutant applied]

497 [new standard applied]

As a result, I object to the adoption by DBC of the Ministry’s numbers: a lesser number to meet the assessed local needs must be agreed upon. This must lead to a revision of the site allocations and a new Plan.

QUESTION: Evidence Base comment

I am opposed to the development of proposed site Tr01

Whilst supporting the efforts of Dacorum to play its part in solving the national housing shortage, particularly for local young people who cannot afford houses, we strongly oppose the Dacorum local plan 2020 to 2038 as currently proposed.

The number of new homes needed:

... is based on outdated figures: the plan is based on Office of National Statistics data from 2014, the more recent predictions of 2018 more than halve the number of new homes needed in Dacorum, and even that data is from before Brexit and Covid so out of date.

... the housing target for Hertfordshire is higher than the comparable counties of Surrey and Sussex (www.lichfield.uk).

... there must be a binding commitment for affordable homes in the plan. Too often developers have been allowed to wriggle out of this commitment. Tring is not suitable for this kind of increase in population:

... there is no capacity for more footfall at the station, the car park gets full and the trains to London overcrowded (based on pre-covid numbers).

... the High Street is unsuitable, as the main throughfare from east to west Tring the High Street is narrow and overcrowded for both traffic and pedestrians at peak times. The structure of the High Street has subsided with the current levels of traffic, this will only get worse.

... under the current proposals Tring bears the brunt of new housing with more homes than other towns in Dacorum (percentage terms).

... there are currently electric vehicle charge points in Forge car park and at Tesco, this is clearly insufficient for a town the size of Tring. Environment

... the plan should allocate land for new allotments for the residents so they can grow their own fruit and vegetables.

... the plan must commit to increase habitat for wildlife, including wildlife corridors and re-wilded areas to increase bio-diversity.

... there should be recreational corridors built into the plan to promote cycling and walking in a safe environment, they should be wide with natural vegetation and not narrow alleyways.

Sustainability

... Building Standards, the plan uses the right words to describe sustainability standards, but offers no commitment to these. All new buildings should be designed to meet the most stringent standards and must be at least net zero carbon. Every home should include a parking space with electric charging, should not be reliant on fossil fuels for heating and should include solar PVs. There is no commitment to this in the Local Plan.

... Public Transport, the plan makes no promise to improve public transport to connect these homes, so people do not have to rely on cars on a road structure that in many cases cannot be widened.

Summary

... Dacorum has declared a climate emergency, this plan should give the opportunity to put that into practice and create an inspirational environment where we can live and work together with nature. Instead the Local Plan is unimaginative and will become a developers dream of suburban sprawl, not something we will be proud of. If there is one thing that has become apparent in recent years, it is that we can't carry on as before and that we need to find a better way forward.

QUESTION: Evidence Base comment	<p>The SA acknowledges issues with Water supply, Drainage and Sewage handling capacity, but the latest Water Scoping Study was produced back in in 2010 as evidence to support the Core Strategy. As we are now potentially looking at 1023 dpa almost 3x the housing numbers proposed, in the Core Strategy (430dpa)and significantly more then the worst case scenario in the existing study, a new study is urgently needed, before the plan can be finalised.</p> <p>The environment agency have said that extraction from the aquifers is at its maximum, and the site assessment summary (table 5-5 in the Interim SA report) shows "unknown " as the impact assessment for water against almost all Berkhamsted sites.</p>

Water runoff is already an issue with rivers running down down steep roads (Crossoak Road and the Roads in Hall Park) in wet weather with High street manhole covers lifting as the drains are overwhelmed.

Further Development at the top of the valley will just exacerbate the problem.

The existing developments on Shootersway on land which slopes down to the A41 have issues with sewage, which needs to be pumped to the Main Sewer on Shootersway – presumably this will also be an issue for many of the new developments.

QUESTION: Evidence Base comment

I consider the council' s Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council' s assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	<p>Numerous local groups have commented on this consultation including Berkhamsted Residents Action Group (BRAG), Berkhamsted Citizens Association, CPRE, Chiltern Society, Berkhamsted Town Council, Dacorum Green Party, Berkhamsted and Tring Labour Party to name a few. I agree with the stance taken by all of these groups. The fact that all these (and there will be others) are providing the same substantive message from the local population to you should demonstrate that these proposals do not have the support of the people. I do not propose to add to your reading burden by rehashing all of their points but I do make the following observations.</p> <p>Basing the target housing need on outdated ONS data was the wrong this to do. 2018 date suggests a much lower housing requirement would be appropriate.</p> <p>The whole concept that the house price increases are a significant function of housing need that can be rectified by a massive house building programme is simply false. The reason for the excessive house price increases is due to very lax monetary policy and a capital regime for banks that favours mortgage lending. Too much cheap money means that people can afford to pay more for housing and has encouraged people to use housing as a financial investment rather than simply as a place to live. Building more houses with the same monetary and regulatory policies will simply add more wealth to the already wealthy and will create huge windfall profits for house builders but will do nothing for affordability.</p>

QUESTION: Evidence Base comment	<p>My family and I moved to Dacorum in 2018 to settle in Berkhamsted for at least the next 25 years. Over this time, we look forward to developing ever stronger links throughout the community and watching our young children grow to adulthood. As such, we have a vested interest in seeing the Borough grow in a way that works for all its citizens – both existing and new.</p> <p>Against this backdrop, I wish to formally state my strong objections to the 'Dacorum Local Plan (2020-2038) Emerging Strategy for Growth'. The evidence suggests that, if this plan is approved, your personal legacy will be of considerably worsening towns and communities within the Borough. For new residents moving to the area and for those already here. For all ages. And for all financial situations. I suspect you don't want to be remembered after you leave this office as the person who caused such damage to an area. So, I ask you to fundamentally rethink.</p> <p>Due to the COVID-19 constraints on travel and mingling for the past year, my experience, and hence prime objection, focuses on the portions of the Local Plan relating to developments in the Berkhamsted area.</p>

To summarise:

1. Flawed modelling of number and type of housing required would fail to meet the actual needs of the voters moving into the area, whilst disrupting those already here far more than is needed.
2. Inadequate commitment to transport infrastructure needs to accommodate the changes proposed would result in a legacy of decades of traffic congestion for voters in Dacorum and visitors to the area.
3. Insufficient provision of water supply, wastewater disposal and other infrastructure would leave households with shortages and damage the local water table, with knock-on considerations around subsidence and environmental impact.
4. Unworkable assumptions around public transport and foot / bike journeys would see considerable increase to carbon emissions in the Borough and considerable travel delays around vital transport hotspots (town centres, schools, rail stations, etc.).
5. The above worsening of conditions for the new and existing voters in the area also comes with an ecological cost due to the loss of green belt. If green belt is to be repurposed, it must be done in a way that makes the greatest positive impact for the current and future residents of Berkhamsted. This plan wastes that sacrifice.

These are fundamental flaws in the strategy underpinning the 'Dacorum Local Plan (2020-2038) Emerging Strategy for Growth'. As such, this plan should be rejected outright, and a new plan drawn up that addresses the actual needs of the area for today and the long-term success of the Borough.

These points are expanded below.

Incorrect Assumptions for Housing Provision

Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, the scale of proposed development in Dacorum is out of balance with the long-term needs.

The Local Plan does not take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6, which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and Area of Outstanding Natural Beauty (AONB).

Recent Government guidance on calculating housing need has been, at best, confusing. The algorithm for calculating housing need that has been used by the Council is a flawed means to calculate the housing needs of the Borough, based on old data.

The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. Instead, the Local Plan is based on calculations using outdated 2014 based ONS data, which results in a significant overestimate of housing needs.

I note that on 16 December 2020 the UK Government published its response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%. The Government also said:

"More broadly, we heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We (Government) should be clear that meeting housing need is never a reason to cause unacceptable harm to such places. ...

Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

Failure to Provide Adequate Supportive Infrastructure

Looking at the proposed developments on Green Belt land, there is insufficient consideration in the Local Plan for the provision of new infrastructure or upgrading the current infrastructure to support the scale of the proposed developments.

Taking a specific example of transportation, consider area 'Bk01 - South of Berkhamsted'. This proposes adding 850 residential units with 2 ways out of the development:

1. Emerging immediately next to a secondary school of over 1300 pupils; and
2. Passing two primary schools on a single, narrow residential road with a 10% gradient and car parking on both sides.

These roads are heavily congested during normal times with the current population – the road by the secondary school backing up during school run times to the main A41 route into and out of the town. Adding 850 households of cars will lead to transport paralysis for the new residents, the homes already in the area, pupils of the schools and people trying to access Berkhamsted from the A41 during peak times.

Similarly, increasing the number of dwelling by over 1,800 in the Berkhamsted area will result in a considerable increase in vehicular traffic through the centre of the town – a route that is already heavily congested at peak times at the A4251 / A416 junction and along the High Street. This is due to the historic layout of the town along a valley with steep sides meaning there are only these two roads into and through the town.

For the increase in population proposed in the Local Plan, there would need to be a considerable extra investment in road widening, traffic flow control measures and new roads to bypass the congestion points inherent with a medieval market town situated in a steep river valley.

Impact on Green Belt and Other Designated Land

The Local Plan states that a key objective is "minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB". This strategic principle is then violated by the declared mission to provide at least 100% of the Council's self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity.

Noting that 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns AONB, this approach comes at considerable environmental cost.

As such, the Local Plan must be fundamentally reworked to avoid such contradictions in strategic goals and principles.

You are now faced with a personal choice.

Whether to be remembered for taking the easy choice and sticking to an inherently flawed plan that will deeply damage the Borough of Dacorum forever – your lasting legacy – or to take the brave decision and do what is right – to reject the current plan and come back with one based on the actual needs of the current and future voters and households of Dacorum.

QUESTION: Evidence Base comment

The evidence base is out of date flawed and a reaction to Governemnt imposed targets which Government have now withdrawn

The UK strategy to hold population growth to less than 5% in the plan period 2020 to 2038.

DBC has not studied the core Government strategy and should withdraw all plans until a reasoned set of statistics can be used.

A Plan is necessary but it needs to be based on fact not fantasy

QUESTION: Evidence Base comment

I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrarily done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	<i>Yes, subject to comments below</i> We have analysed the very comprehensive raft of evidence base documents.

We reiterate that there is clearly detailed work to be done on the IDP as the draft plan progresses. Further detailed work will be necessary on transport /highway interventions as per the Aecom reports and in particular the costs and funding/viability.

Once the plan passes to the next phase, we would wish to engage in detail with DBC officers to identify what infrastructure is fair and appropriate for BK03, also having regard to existing CIL and other funding sources. Also, BSG is using the receipt to invest directly in education provision; sports provision plus wider road/infrastructure improvements on an ongoing basis.

QUESTION: Evidence Base comment	<p>There has been insufficient time available in this consultation for me to consider all the supporting evidence. The consultation should be reviewed and re-released with a longer response period. My initial thoughts are:</p> <p>The evidence base would benefit from a full ecological survey of the chalk rivers and the impact of the proposed development, including the wider catchment. It must address how sufficient water is to be supplied and provide a tangible time-scale of key supply events.</p> <p>The evidence base would also benefit from an evaluation of the development proposals in the context of parts of Dacorum becoming part of a future National Park and any considerations that should be specifically included in to support or prepare for National Park status</p> <p>The evidence base would benefit from a detailed ecological study of all main wildlife corridors and include recommendations regarding each proposed development site along their route. It should propose priority and strategic sites or parts of sites that should be conserved as critical parts of the wildlife corridor with recommendations as to how they could be enhanced to support specialist habitat and vulnerable wildlife rather than simply relying of 'increasing biodiversity'. The true measure of biodiversity should be measure across the Borough as a whole and be judged inthe context of national biodiversity targets.</p> <p>The evidence base regarding population size and growth and therefore housing need is entirely out of date and the consultation should be halted and revised after the census when more recent and reliable information will be available.</p>

QUESTION: Evidence Base comment	<p>The evidence base for the entire draft Local Plan is based on out-of-date (2014) data of housing need. It is over estimated by at least 40%. Therefore the evidence for the exceptional circumstances for building over approximately 2,000 acres of Green Belt land is not valid.</p> <p>A lot of work has been done in producing this plan but it is based on a false premise - the amount of housing need, and if executed as is, will overwhelm our existing communities, erase Green Belt never to be replaced and lead to a lot of lasting ill feeling and resentment.</p> <p>This not to say that there is no evidence of housing need</p>

QUESTION: Evidence Base comment	Dacorum Borough have chosen to accept Central Government imposed growth figures that are not substantiated by evidence and are based upon outdated ONS projections and an arbitrary and simplistic algorithm. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects. The plan does not address the overwhelming evidence that any development must be carbon neutral, it degrades our natural environment when the pandemic has shown us more than ever the importance of access to green spaces - and the increase in footfall has also show the fragility of our local nature reserves and that they cannot support the existing population - let alone the proposed increase in the population in the plan. Any increased population necessarily requires a concomittant, or greater, increase in nature reserves. This is not included in the plan. The plan needs to be thrown out and completely rethought.

QUESTION: Evidence Base comment	<p>DBC has used outdated (ONS 2014) housing projections, whereas it is required to use the most recent and relevant ONS projections (2018) so I do not agree that the Evidence base is adequate, up-to-date and relevant.</p> <p>Please see Topic Paper 'Development Strategy November 2020': this tracks the history, marshals the data and argues that the dwelling numbers for the Reg18 Plan meets the housing needs for the Borough viz 922 [or recently 1023] pa. I don't believe this is the correct basis for the Plan – which is based on 'national requirements' rather than local needs.</p> <p>The data below is drawn from reliable sources e.g. ONS and the study commissioned by the Districts' Joint Housing Needs Assessment quoted in the Plan.</p>

The current dwelling numbers established in the Adopted 2013 Core Strategy sets an annual build rate of 430 pa. The Data shown in Fig 2 Housing Trajectory 2020 – 2038 [p 38] records anticipated completions across the Borough for 2020/21 as 654 and 21/22 as 1036. These are **well in excess** of the Core Strategy and also the numbers projected by ONS.

The numbers set for the Draft Plan have been based on the ONS projections of housing ‘need’ but manipulated by a formula adopted by MHCLG to determine the ‘national requirements’ stated in Para 6.7 above.

Dacorum

ONS projection of Dacorum annual housing growth

After adjustment by MHCLG algorithm

After adjustment by MHCLG algorithm

ONS 2014

730

1023 [new standard applied]

ONS 2018

355

922 [mutant applied]

497 [new standard applied]

As a result, I object to the adoption by DBC of the Ministry’s numbers: a lesser number to meet the assessed local needs must be agreed upon. This must lead to a revision of the site allocations and a new Plan.

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment	I can not understand why such an important decision is relying on out of date information (2014 Office of National Statistics) when there is already up to date information from the Office of National Statistics from 2018. This is such an important decision why are we not using the right data? If we were, we would see that the expansion proposed is almost double the potential requirement. Again this doesn't make sense given the impact on the environment.

QUESTION: Evidence Base comment	<p>There is little evidence that the council have considered how to give the Green Belt the protection required by the NPPF. There is little to suggest that local opinions and experience have been given due weight. Consultants cannot replace experience of living in a place. There is no attempt to ask what new housing is actually required in Dacorum. The Government methodology for calculating housing needs should be adapted to the local area, not applied blindly. Birth rates are falling and the current pandemic has led to a large number of excess deaths but neither of these facts are considered. The 2018 ONS data, with standard methodology applied, leads to a figure of 497dpa not the 1023dpa being used. The current proposals therefore vastly overestimated the new housing required and unnecessarily reduce the Green Belt. Tough immigration policies and the fact that many European nationals are leaving as the effects of Brexit are felt means that even the lower figure may well be in excess of what is actually needed.</p> <p>There are inaccuracies within the main consultation document which exaggerate the green space by showing land already developed as open space and including private garden space as open land. It is at best misleading to show</p>

sports fields, private tennis courts and enclosed football pitches, all of which are inaccessible to the general public, as open land. It distorts the true picture of open space within the borough.

Average windfalls are inexplicably projected at 133.8dpa (Table 2) whereas they have averaged 346.3dpa over the past 5 years. No explanation is given for this discrepancy.

QUESTION: Evidence Base comment	Tornadoes observes that whilst there is an evidence base, that is relevant and, at present is up-to-date, the ongoing challenge for DBC is how it maintains the relevance and currency of the evidence base. To illustrate the point, DBC Playing Pitch Strategy 2019, DBC Indoor leisure Facilities Assessment 2019 and DBC Local Football Facilities Plan 2020 are all already out-of-date and as of this Local Plan Consultation no progress has been made on actually implementing any of the requirements, actions or recommendations. And, all of these are before the proposed increase in housing and population for Tring is taken into account.

QUESTION: Evidence Base comment	<p>The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.</p> <p>The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.</p> <p>The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.</p> <p>Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date information.</p>

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional</p>

circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment

I am writing to object to the proposed local plan.

I find it shocking and disturbing that the Council is looking to change so dramatically the size and therefore nature of our local towns.

Having grown up in the area and gone to school in Tring, I now live in Berkhamsted with my family. I value the character of these market towns and the amazing natural beauty of the surrounding countryside.

I find it very difficult to reconcile how there can possibly be a demand for the level of housing proposed. The statistics on which these numbers are based appear to be already many years out of date and on any basis clearly do not take

account of the changes which the pandemic will undoubtedly have on housing needs. The local towns are currently very much in the commuter-belt for London with the inevitable knock-on effect on house prices. With more people working more often from home in future, it is widely considered that people will also look to locate much further out from London. It seems premature to put in place a Local Plan for such a drastic increase in house building before the true impact of the pandemic on working lifestyles and housing needs is known. Given the pace of change in businesses already in the last year, a delay of only a few years may be all that is necessary to get a better handle on what the local area's housing need actually is going to be over the next 10-20 years.

I am also particularly concerned about the impact on the local environment. I am shocked to learn that it is even possible to build on green belt land and dismayed at how much of it is proposed to be sacrificed for "growth". The impact that such an increase in the local population will have on the surrounding countryside will surely be immense and in particular will increase the need for water extraction from the aquifer which will threaten the upper reaches of the rivers Gade and Bulbourne, and is likely to leave these dried out to nothing.

Finally I consider the way this consultation has been conducted is simply inadequate. We received for the first time today - 25 February - a leaflet through the post with some details of the Local Plan from the Council. This is for a consultation which apparently opened on 27 November 2020 and is to close in two days' time. Fortunately I had recently been alerted by a friend to do my own reading on the plan but I am concerned that many in the local community may not have been aware of the plans until this late stage or even now.

I am also submitting this objection by email as the online portal for doing so is so unwieldy. How anyone who is not online or computer literate is supposed to respond to the consultation I don't know. Limiting the ability to respond to this format must surely be excluding a sizeable proportion of the local population.

I hope that the Council will reflect and accept that this plan needs to be delayed until there is greater clarity on the likely impact of the pandemic. In the meantime the opportunity could be taken to consider further the environmental impact and in particular the purpose and precious nature of the green belt. Once it has been built on, we won't get it back.

QUESTION: Evidence Base comment	<p>I would like to make the following points:</p> <p>To hold such a detailed plan consultation in the midst of a worldwide pandemic is questionable. People are far more focused on other issues crucial to their survival and have been over the past year. This is borne out by the tiny number of responses you have received.</p> <p>The plan was presented in a way that was not user friendly, salient points were not easily picked out, even by those who are highly educated, let alone those are not. This type of plan should be presented in a clear and concise but fully explicit</p>

manner such as an exhibition, with displays that are accessible to all (clearly not possible in a pandemic), for all areas of Dacorum.

The response portal is not at all user friendly and has put many people off responding.

The plan and consultation was not widely advertised and only after much petitioning about this point was literature sent to every household. The literature sent was wholly inadequate and set to mislead about some of the most important (and controversial) points in the plan.

The pandemic has resulted in massive changes in lifestyle and these are not reflected in the plan, therefore it should be revised in light of these major changes to how we live and work.

It makes no sense to use the 2014 ONS figures with the incorrect algorithm when more realistic projected numbers can be based on the more recent 2018 projections. Using the 2014 figures does not provide an “objectively assessed need”. Consequently the numbers projected are far too high.

Villages will cease to be self-sustaining and become car-linked hubs to the main towns.

Social housing needs for the area will not be met by this plan.

The projected use of greenbelt land should not be pursued and the greenbelt should be protected. Alternative locations must be sourced as a priority and the greenbelt protected.

There is no mention of the Glover report which proposes that the AoNB becomes a National Park. This plan goes against this report.

Climate Change considerations are key. The plan does not address how house building and subsequent use, transport and infrastructure will align with the Government 2025 net zero target. The carbon cost of using greenbelt land is key.

Many of the documents referenced are in draft form and not up to date., including the habitats assessment (2006). There are no Habitats Regulations Assessment Documents .

Biodiversity value change assessments should be included and verified independently.

Most of the developments will be taken by commuters rather than locals as not affordable for locals. Priority and affordability for locals should be key.

Inadequate transport and infrastructure: Provision must be made for sustainable transport from existing and new developments. Most of the new developments are out of town and the car cannot be prioritised for travel to stations (most of these developments will be for commuters and few locals). Bicycle travel must be prioritised. I am too scared to cycle on the roads. My husband has had 3 serious accidents (broken collarbones twice) due to potholes.

The people of Dacorum must have this plan explained to them so that they can understand the full impact of the plan proposals and hopefully realise that it is highly detrimental to future generations and can challenge it accordingly. Having spoken to them, almost all of my friends have no real idea about any of it and the seriousness of it.

The points above should be addressed and the plan put out for consultation in a correct manner once the world returns to some sense of normal... our future depends on it.

QUESTION: Evidence Base comment

—Due to Covid-19, we are living through a period of rapid evolution with the full impact yet to be assessed. It is almost impossible for the full impact to be assessed as yet, but there are indications that there will be less demand for retail and office space in town centres, freeing up much brownfield land for development. Many families may choose to move further from the South East as they can now work remotely.

— There has been a change to the way the housing target figure was produced mid-consultation. This includes plans to categorise land as ‘protect’, ‘growth’ and ‘renewal’ areas. The plan to release significant Green Belt land into the hands of developers would risk these highly valued areas becoming growth areas. This is a serious risk to the Green Belt — it would result in a significant loss of planning control to local authorities and local residents and permanently blight our valued landscape.

— The Glover report has been ignored — this has recommended that the Chilterns AONB becomes a national park — we do not want a sprawl of executive housing estates encroaching on the AONB. This is of particular concern in Northchurch which is overlooked by the AONB - the built up part of Northchurch village currently dips into the Bulborne valley, such that there is an uninterrupted view of rolling countryside from the top of BK06. With a housing development here, there will be a permanent blight on the view from the AONB. This does not appear to have been considered by those drawing up this plan. The failure to recognise Northchurch as a separate entity to West Berkhamsted and references to the urban part of Northchurch really do indicate a lack of insight into the rural setting of Northchurch - it really is not just the edge of Berkhamsted, but a place in its own right. Limiting the settlement to its position of on the valley floor, really is crucial to maintaining the views from the surrounding AONB and green belt areas.

— There is no agriculture strategy. BK06 has been farmed for as long as I can recall. I have lived in Northchurch for 20 years and know that it has been ploughed every year. I walk my dog there regularly. In lockdown, the perimeter of this field was one of the limited areas that people could walk whilst maintaining distance due to the narrow pavements in Northchurch.

QUESTION: Evidence Base comment	<p>Please take this email as my formal response to the Dacorum Local Plan (2020-2038) Emerging Strategy for Growth Consultation.</p> <p>The Berkhamsted Residents Action Group (BRAG) has responded in full to the consultation. To avoid repeating the extensive points made in their response, I request you accept this as confirmation that I wish DBC to duplicate BRAG's responses under my name.</p> <p>There are many reasons why I object to the Dacorum Local Plan, including its destruction of our vitally important Green Belt and the lack of infrastructure to support it. In addition, I think the number of proposed developments across Dacorum is excessive and I question the formula used to calculate it.</p>

QUESTION: Evidence Base comment	<p>Whereas the Local Plan gives special attention to the Ashridge portion of the Beechwood SAC, little specific attention is paid to the other SSSI's which border Tring (and another which is just outside in Buckinghamshire). No consideration is given to the adjoining woodland in Buckinghamshire. The impact of proposed developments on these areas are not reflected in the Local Plan.</p> <p>If it is concluded that Green Belt land should be released for housing, the NPPF makes it clear that improvements must be made to environmental quality and accessibility of remaining Green Belt land. There is no detail/commitment to how this would be achieved within the Local Plan.</p>

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment	<p>Insufficient infrastructure to sustain high growth numbers</p> <p>The draft Infrastructure Development Plan (IDP) is woefully underdeveloped, which is very concerning given the 25% increased growth.</p> <p>The proposed level of development in Dacorum, along with potential development in neighbouring St Albans City and District, Three Rivers District and in Buckinghamshire east of Aylesbury, would place an unacceptable burden on all</p>

types of infrastructure services and facilities in Dacorum. The plan as proposed does little to address the improvements in infrastructure required to support the proposed increase in housing. In particular, there are concerns regarding the impact on water supply and waste-water disposal. The level of new housing proposed is expected to put severe strains on water supplies to Dacorum during the 2020's under drought conditions. In these circumstances there would be no option but to extract additional water from the chalk aquifer, despite it already assessed as being "over-abstracted".

Waste-water disposal is an area of particular concern in this area. In Potten End there are several houses that experience sewage backing up into their garden already.

QUESTION: Evidence Base comment	<p>Major gap in transport plan between A41 and B440 (Leighton Buzzard Road)</p> <p>The Transport Plan contained in the DLP is incomplete, and I have serious concerns about an increase in traffic through Potten End. Tring is projected to grow by 55%, and Berkhamsted by 25%. There is also a major development to the north of Hemel, called the "Hemel Garden Communities", which will comprise 1,550 homes built over the next 17 years, and a further 4,000 afterwards. Also envisioned is a potential new link road from J8 on the M1 through the new garden community to the B440 (Leighton Buzzard Road). A reference is also made to this new link road being utilised by Tring and Berkhamsted residents to access the M1. However, there is <u>no consideration at all</u> given to how those residents get to the B440 in the first place. The obvious answer is via Potten End. This will lead to a considerable increase in traffic through the lanes of the village, not only because of the substantial growth of the adjoining settlements, but also because the changes in the Hemel Hempstead road layout will make it harder to access the A414/M1 through Hemel (reduction of lanes on the A414). This will funnel even more traffic onto cross-country lanes. This is particularly the case for HGV vehicles which are prohibited from coming from the north via Water End Lane and from the south through Warners End (via Galley Hill) – in both cases because of weight restrictions on the relevant roads. Potten End has seen a noticeable increase in this type of traffic over the past few years since those restrictions have come into force.</p>

QUESTION: Evidence Base comment	<p>I am responding to the consultation on behalf of myself and the X adults who live with me.</p> <p>I gave up trying to use the portal as it was impossible to work through all the documentation to answer the questions - why wasn't a simple questionnaire set up, separate from the documentation? This is one of the worst examples of a system set up for the benefit of the people receiving and collating responses rather than making it easy for citizens to reply. This is an unacceptable barrier to responding.</p> <p>I have lived in Boxmoor for over 23 years, I went to senior school in Warners End and until the pandemic commuted to London daily. I brought up my family here and have loved being close to the town centre, the canal and plenty of green space that sets Hemel aside from many post war developments.</p>

My response lacks detail as there is far too much information to go through on top of an office job, caring for an elderly mother with dementia who has been unable to attend her days centre since April last year, two close relatives suffering from recent and historic trauma, running a small local business that has been busier due to more people working from home during the pandemic, and my role as a local councillor. The consultation is not very accessible or easy to digest on a screen, even for me an IT literate person who has a professional office set up at home, with a large screen/keyboard/mouse etc. For those who only have a tablet or phone it is impossible to engage in any meaningful way with the consultation. I apologise in advance for any typos - I am exhausted from all the extra work I have had to do in the pandemic due to public services being closed for a year and more people in the house and community to look after.

I am educated to MSc level, a former Senior Civil Servant, and am computer literate - for the avoidance of doubt when reviewing my complaints about how hard you have made it to reply and engage with the process for the citizens of Dacorum.

I urge councillors and officers to take a step back and put themselves in the shoes of residents when designing huge and life-changing consultations. This has not put the council in a good light. Some local councillors have taken to social media to publicise the consultation but there was very little from the council. This consultation should have been postponed or extended to beyond lockdowns and school closures to enable a full and open review and engagement with the whole community.

We support the responses of OneVoice, Chiltern Society and the Liberal Democrat Group, among others, so I will not seek to duplicate their detailed points here, but focus on the main points of concern for a long time resident of Boxmoor, a jewel in Hemel's crown.

Greenfield/greenbelt

The green belt should be protected at all costs, and brownfield sites prioritised over any permanent destruction of greenbelt land. The council has said in public council meetings that they will protect greenbelt to the death but this is not what the consultation says and this is what has enraged so many residents.

Housing requirement and council tactics (Q1)

Too many houses, too few affordable homes.

It is absolutely clear that the number of houses supposedly held to our temples is far far too many on any rationale and evidence-based up to date analysis. The plan is woefully short on ensuring a large proportion of social/affordable housing, which is what residents of Dacorum need. The council has failed its citizens by refusing to face up to the Government and push back on the numbers. To throw the pass to the community in the middle of a pandemic with a consultation that proposes an eye-watering and irrevocable destruction of greenbelt and increase in town sizes of Berkhamsted and Tring is incomprehensible. This is an incredibly risky strategy in the middle of a pandemic when you will not have reached a significant proportion of the community die to pandemic restrictions. There are still more people in Dacorum who don't know about the consultation or its life-changing implications than there are who do know. And of those who do know, how many of them will have the time or energy to reply substantively? Please, on behalf of your residents, fight back at the government figures and listen to us. To ignore any criticism as politically motivated blinds you to listening to what we have to say *as people who live here and will live here, hopefully alongside the next generation, for the rest of our lives*

- *decades* is rude at best and incredibly insulting and not in the interests of what's best for Dacorum at worst. Other councils have fought back, why didn't we? Why didn't you agree the tactics with the residents whose lives will be affected by the new Local Plan?

The evidence base for the number of houses needed in Dacorum should be the 2014 ONS numbers and not 2018.

London Road development

4 storeys max at the station.

Another case of the Council not appearing to listen...in the most recent consultation on the station development, the overwhelming response from residents was to limit any development to 4 storeys to protect the local scenery, including overlooking the ancient grazing land of Boxmoor Trust and the view of Roughdown common and the fields beyond from resident in the heart of Boxmoor village. Why does the current plan say '8 storeys or more'??? What is the point of consultation?

It is clear to anyone who lives in the immediate area or who travels along London Road to and from town and Apsley or the A41 that height is a given at the Plough roundabout and at the scarred land and buildings next to Aldi at the A41 Junction.

There is scope to develop the ugly brownfield sites along London road opposite the moor, eg around the old gas works and near the trainline between the A41 and the roundabout at Roughdown road.

The area between Roughdown Road and the station roundabout must remain low rise to protect the street scene as Hemel moves into more green land towards Box Lane. I will fight any proposal to have higher than 4 storeys along this stretch of road and at the station.

Who are the new homes for?

The original proposals for the station development showed apartments that were clearly for commuters, which would be certain to pull people from London into the areas and with inadequate numbers of affordable properties, would not help local people looking to get onto the property ladder.

Commercial/retail at the station

Lockdown has impacted local businesses heavily and the council should be very cautious about approving retail space at the station that could take business away from Boxmoor village centre or town centre, the latter having taken a huge hit from multiple lockdowns. With the town walkable for the majority of people who would live in starter apartments like those proposed for the station development and regular bus services to town, there is limited rationale to have a supermarket or too many restaurant or food businesses at the station location.

Sustainability/climate change

There is nothing in this plan to reassure me that we would have sufficient water to provide for all of the new homes, nor that the council is acting NOW on the climate emergency they declared. An emergency means taking action immediately and we have seen far too little action and too few ideas in this plan, contradicted by the destruction of the greenbelt etc.

The council has also agreed to protect the area's unique chalk streams which are essential to maintaining a balanced ecology. These are at risk now and adding too many more houses will impact them further.

The planned housing should be carbon neutral at worst and negative at best. The plan is woefully unambitious on this.

Infrastructure

The infrastructure plan lacks detail on how the roads and cycle lanes will be built/improved and designed to reduce car use. The council needs to be far more proactive, imaginative and positive about designing for a low carbon future and helping residents live in uncongested places.

In summary

There is insufficient evidence of housing need to support the level of development (Q8). Full exploitation of brownfield sites for the Local Plan is not fully evidenced. So the Plan fails to meet Section 137 of the NPPF, which specifies the exceptional circumstances that need to exist to justify changes to Green Belt boundaries.

PLEASE LISTEN TO US - use the citizen's panel and have one for each area in the plan so we can co-design housing, infrastructure and space together. No one knows the area and its needs better than the people who live here.

There are so many good people who work for the council and have worked so very hard on this plan but this proposal is cloth-eared, unambitious and risks ruining the lives and the enjoyment of Hemel and Dacourm's green spaces forever.

QUESTION: Evidence Base comment

Major gap in transport plan between A41 and B440 (Leighton Buzzard Road)

The Transport Plan contained in the DLP is incomplete, and I have serious concerns about an increase in traffic through Potten End. Tring is projected to grow by 55%, and Berkhamsted by 25%. There is also a major development to the north of Hemel, called the “Hemel Garden Communities”, which will comprise 1,550 homes built over the next 17 years, and a further 4,000 afterwards. Also envisioned is a potential new link road from J8 on the M1 through the new garden community to the B440 (Leighton Buzzard Road). QUESTION: Evidence Base comment

Please take this email as my formal response to Dacorum's Local Plan (2020-2038) Emerging Strategy for Growth. I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this

information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION: Evidence Base comment

We wish to object to the plan for the following reasons.

- 1 Although emphasising green spaces the plan increases housing by 25% and uses 2000 acres of valuable Green Belt and open spaces across the borough. If Covid has taught us anything it is that Green spaces are vital and must be kept in our local community.
- 2 Impact on Green Belt & Chiltern area of Outstanding Natural beauty (AONB). The scale of the proposed housing will have a detrimental impact on the natural environment
- 3 Underestimating Brown field potential (Q2 of consultation). Although the plan includes some brownfield suites the major housing developments are on the outskirts of Hemel, Berkhamsted and Tring. The plan fails to take into account the impact of Covid and recent working from home changes; in the near future more office and work sites may become available.
- 1 Unsustainable development (Q3 of the consultation) Focusing building on the outskirts of the main towns means that the developments are some distance from existing transport infrastructure. This will result in several thousand more cars on local roads.
- 2 More congestion on the roads, particularly impacting Potten End. The plans suggest traffic coming from Tring and Berkhamsted would use the new link road in North Hemel from the Dagnall road (B440) to J 8 on the M1, rather than using the old link road through Hemel. This is so close, the new link road is an unnecessary addition. Also there is no way for the traffic to get to the A41 From the B440. The route would take you up through Potten End and then the narrow streets of Berkhamsted. The leight on buzzard road is often queuing in the rush hour times at

the moment especially to go over the bridge at Water End. The proposal would worsen this situation. It is unacceptable.

- 3 Water supply and waste water disposal (Q6) The chalk aquifer is already over abstracted and local residents are aware of the fragility of the water supply. The level of the new housing will put a severe strain on supply and disposal. There is the potential to damage the boroughs precious chalk streams. Dacorum and affinity water have recently spent time and money on improving the River Gade only for this plan to put it at risk.

We strongly object to the number of houses and the Motorway link proposed. The plan is based on figures the the government has now withdrawn. The plan should be based on the most recent ONS figures from 2018 which suggest a housing target for Dacorum of c. 500 houses pa, this is half the figure on which the plan is based.

QUESTION: Evidence Base comment

The changes of housing target figures has changed. The Glover report which recommended that the Chilterns AONB becomes a national park has been ignored. There is no agriculture strategy. There is no excuse for using ONS statistics from 2014 instead of the most up to date ones!! It is not OK to say that you want to use the old figures (730 per annum) instead of the new ones (355) just because there has been 'significant change'. This is outrageous and shouldn't be allowed.

QUESTION: Evidence Base comment

Looking at the ARUP Stage 2 Green Belt Review and Landscape Assessment the following comments are made.....

Figure 4.2 is an incomprehensible scrawl which is supposed to represent a Sprawl Assessment... maybe this was not the final document?.

Page 37 of the document has bullet points for absolute constraints for future land use change , one of which is Flood Plain however a number of the proposed development areas are in the flood plain. !!

The assessment of whether a subarea meets the criteria seems to be very subjective. The rational behind the division into subareas is not explained . By dividing the green belt into so many sub areas it is easy to select one and say it fails to meet the criteria for no build, but what is not taken into account is the connectivity between these parcels of land. For the natural world connectivity is of paramount importance .

Section 5.2.1 Functional Flood Plain :- The Chilterns chalk stream have historically been widened , deepened, straightened and moved. Much of the river is therefore no-longer connected to its natural flood plain. River restoration seeks to re-dress these changes in order to create a more natural river and one that will be more resilient to climate change. The planning process only seems to look at the functioning flood plain where it should be looking at the natural flood plain. By building on the natural flood plain the opportunity to restore a river will be lost as it will be argued that the restoration will increase

the risk to the buildings which has been put up on the flood plain. With increases in the intensity of storm events as a result of climate change , rivers are likely to reclaim their natural flood plains meaning that costly flood defenses end up having to be built which may also be to the detriment of the river.

The Housing Market Assessment document (Feb 2016) sets out the expected housing needs to 2036, but how will Covid 19 have changed these. We currently are expecting major changes to how people use high streets, with the loss of many retailers. Will the change in work practices (i.e. much more home working) change the housing need?

Overall the planning documents show a lack of understanding of rivers, flood plain and how the inter connectivity between the river and its flood plain is of paramount importance. Additional housing will increase impermeable hard standing areas, increase runoff and increase the potential for polluted and silt laden runoff being discharged into the chalk rivers. This has a direct detrimental effect on the river and an indirect impact on the aquifer in terms of reduced percolation and potential for pollution.

There also seems to be a lack of understanding with regards to the importance of connectivity to the natural world both fauna and flora. By building on bits of the green belt connectivity is lost and this issue needs to be addressed if building is to go ahead. Building on natural flood plain should not be considered at all, and future river restoration schemes included in the planning process as a matter of course. Mitigation for climate change needs to be much more prominent and the developers need to demonstrate clearly how this will be achieved.

Dacorum BC also needs to develop a clear policy on how they will mitigate for climate change, how it will reduce single use plastic, how it will positively assist in river restoration projects, how it will consider the wider aspects of the effect of building new houses such as increase runoff and reduced percolation, connectivity etc

QUESTION: Evidence Base comment	Sustainability The Sustainable transport plan is poor in respect of Berkhamsted - because the proposal to build is at the top of the hill, where car journeys are the only feasible transport for most. This isn't very green and will then lead to further vehicle congestion in town which is already high at peak times.

QUESTION: Evidence Base comment	I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation. This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation

is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment

I have been informed from a number of sources that the Evidence Base is neither up to date or accurate.

The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.

The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.

The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.

Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date 2018 data.

QUESTION: Evidence Base comment	I can not understand why such an important decision is relying on out of date information (2014 Office of National Statistics) when there is already up to date information from the Office of National Statistics from 2018. This is such an important decision why are we not using the right data? If we were, we would see that the expansion proposed is almost double the potential requirement. Again this doesn't make sense given the impact on the environment.

QUESTION: Evidence Base comment	Whereas the Local Plan gives special attention to the Ashridge portion of the Beechwood SAC, little specific attention is paid to the other SSSI's which border Tring (and another which is just outside in Buckinghamshire). No consideration is given to the adjoining woodland in Buckinghamshire. The impact of proposed developments on these areas are not reflected in the Local Plan. If it is concluded that Green Belt land should be released for housing, the NPPF makes it clear that improvements must be made to environmental quality and accessibility of remaining Green Belt land. There is no detail/commitment to how this would be achieved within the Local Plan.

QUESTION: Evidence Base comment	It is also clear that the Infrastructure Delivery Plan also contravenes Government policy. Aside from being woefully inadequate on all measures, it can no longer apply to how Dacorum's communities need to evolve. As such, the plan should be struck from the record and completely redrawn to acknowledge current policy and environmental targets.

I look forward to receiving acknowledgment of this objection and, of course, the revised plans.
 Please note, I expect the revisions to accommodate adequate schooling (primary and secondary) for any population increases.
 The borough is already woefully under-serviced.

QUESTION: Evidence Base comment	The evidence base prepared to support the emerging plan is significant. Harrow has reviewed that information and considers that it is largely up-to-date, relevant and proportionate. However, the following are important omissions:

- A detailed Viability Appraisal to support the various allocations (including individual site requirements) and development management policies, particularly those setting development standards and requiring financial contributions. That information should be provided as soon as possible, enabling the various policies to be thoroughly tested to ensure that the various policy requirements are not so onerous as to make development unviable; this is particularly important in light of the significant requirements set out in the Infrastructure Delivery Plan and the various development management policies (see also response to Q.3)
- There is an urgent need for the council to provide a Habitats Impact Assessment. This is a statutory requirement and the plan cannot proceed until that important evidence is in place. It is particularly important in Dacorum to inform development plan policies relevant to the Chilterns Beechwoods SAC.

QUESTION: Evidence Base comment

Current situation and Context

Section 6 of the Childcare Act 2006 places a duty on all local authorities to secure sufficient childcare for working parents, or parent, who are studying or training for employment for children aged 0 to 14 (19 years for disabled children). HCC also has a statutory responsibility to provide universal Free Early Education (FEE) for 3 and 4 year HCC also has had a statutory responsibility to provide 15 hours FEE to eligible vulnerable 2-year-old children across Hertfordshire. An extended entitlement of an additional 15 hours free childcare was introduced for working parents in Hertfordshire in September 2017.

Provision of all the above entitlements are provided in schools, private and independent pre-schools, day nurseries and childminders. In addition to FEE places, HCC has a duty to ensure there are sufficient childcare places for 0 to 14-year-old

children (age 19 for children with special education needs E.N.D.) in pre-schools, day nurseries and out of school clubs, which can run either from school locations or other community facilities.

The county council currently RAG rates the sufficiency levels for 2, 3, and 4 FEE places and extended childcare entitlement in Family Support Service Family Support Service localities are mapped against LSOA boundaries and are based on settlements/populations.

The key data is measured as follows:

Green Sufficient Places Available (Provision largely matches family's needs)

Amber Near Sufficient Places Available (A gap exists which may give families difficulties in accessing provision)

Red Insufficient Places Available (A gap exists which may prevent families from accessing provision)

Children's Services (School Place Planning)

As a forward planning tool, the county council is using a tiered approach to calculating child yield arising from emerging local plan This tiered approach uses data from our pupil yield survey. It is considered that a tiered approach to pupil yield can reflect a more refined settlement-based strategy based on the forms of development likely to come forward in a specific area as follows:

Tiered Approach to Pupil Yield in Local Plans

Tier

Ratio

Description of development

1

1:400

These sites are typically greenfield sites with a dominance of houses (typically 80/20), a higher proportion of 3+ bed properties, and a higher proportion of detached or semi- detached houses.

2

1:500

These sites are typically PDL with a mix of houses and flats, and a higher proportion of terraced, maisonettes or flats. There is generally a 50/50 Split between smaller (1 & 2-bed) and larger (3-bed+) family homes and houses are most likely to be terraced.

3

1:1000

These sites are typically PDL with a dominance of 1 & 2 bed properties and are mostly flatted developments (at least 75% flats).

The tiered approach is used in order to estimate the child yield that could be generated by each respective The county council therefore considers this approach to be sufficiently robust to inform the borough council of the need for additional education provision within this Regulation 18 local plan consultation.

Specific comments in relation to additional education need is set out under the relevant policy and supporting text that accompanies each specific

Community Protection

Hertfordshire Fire and Rescue Services (HFRS) has five fire stations within Dacorum Borough:

Hemel Hempstead: This is a full-time fire station which has two permanently crewed fire engines and also houses HFRS Decontamination and Environmental Protection Unit (DEPU);

Kings Langley, Berkhamsted, Tring and Markyate: These are on call fire stations and each station houses a single fire engine and are crewed on a retained basis e. firefighters in the community respond to an alerter.

HFRS capacity to deliver an emergency response is not unduly affected by individual developments even if they are fairly However, the 'cumulative effect' of the allocations contained within the draft plan, along with further developments in neighbouring St Albans City & District will likely impact HFRS's capacity and place additional demand on fire and rescue resources. The predicted situation in and around the greater Hemel Hempstead area is leading towards a situation where HFRS's ability to continue providing a suitable response within our agreed timescales may be compromised.

HFRS may look towards the potential of dividing resources at the existing fire station in Queensway, Hemel Hempstead (which houses two fire appliances) into two fire stations (one fire appliance at each), one located at the far east of Hemel Hempstead, ideally on or about Junction 8 of the M1; and one in the west of Hemel Hempstead, ideally in the Aspley/Two Waters area. This will place additional demand in terms of the need for additional capital investment in new facilities and funding for additional equipment, and on revenue budgets for firefighters, officers and support staff. We would welcome further dialogue on this issue following this consultation.

HFRS will seek, where possible, planning obligations towards fire and rescue services via Section 106 agreements, along with the Community Infrastructure Levy (CIL). Contributions will be sought from schemes which have the potential to increase the demand on the service as currently provided across the borough, particularly as the impact potentially crosses two Dacorum and St Albans Local Planning

HFRS requests to be consulted on requirements for the provision of water supplies, e.g. suitable and sufficient water mains and hydrants. Fire hydrant(s) served by the mains water supply shall be provided prior to any dwellings being occupied and to the satisfaction of HFRS. It is also recommended that sprinkler systems and Automatic Water Suppression Systems (AWSS) are placed in all buildings and new developments, in order to form part of an integrated fire safety provision. The expansion of Hemel Hempstead provides an opportunity to apply a proactive approach towards protecting the community and infrastructure through in-built fire suppression systems and the inclusion of AWSS.

Lead Local Flood Authority. The South West Hertfordshire 2018 level 1 Strategic Flood Risk Assessment (SFRA), provides an overview of flood risk in Dacorum both currently and with an expectation that flood risk will increase due to the predicted impacts of climate This is a satisfactory evidence base for the initial consideration of flood risk in the Draft

Local Plan and it sets out the broad principles of how flood risk should be assessed and managed. The county council is pleased to see that the SFRA has been updated in May 2020 (addendum) and further updates should continue to be made, after adoption of the Local Plan, when required by improved knowledge or insights into flood risk.

It was noted that the most recent Level 2 SFRA is dated 2008. References in the draft Local Plan to Level 2 SFRA are assumed to refer to new or updated SFRA level 2 that will follow on from the October 2018 SFRA. The potential impact of flood risk is recognised in the draft strategy and there are appropriate policies for the treatment of flood risk impacting on development sites. Three suggested additions are as follows:

Reflect on the potential impacts of climate change and the need for adaptation across all of the policy areas in the document. This should include commentary on the benefits of integrated As an example, specifically for flood risk, it would include using management of flood risk to benefit water resources, the benefits of (blue) green infrastructure open spaces delivering multiple benefits eg SuDS, shade, supporting biodiversity, addressing heat island effects.

Consider if the principle of new development making a contribution to reducing existing flood risk and help with adaptation to predicted increases in flood risk as a result of climate change can be included in policy. Example would be to the west of Bovingdon and the south-west of Berkhamstead where development is proposed at the head of surface water catchments and where an appropriate drainage strategy could promote management of surface water on the site in a way that would benefit areas where there is flood risk lower down the catchment.

A more consistent approach to the tables in the section on Hemel Hempstead Garden Communities and Flood Risk and drainage does not appear in all of the tables eg. Growth Area HH03. If there are no known points to consider, then this should be stated. In the case where there is uncertainty about management of flood risk and drainage this should be stated. Other examples e.g. Growth Area HH18 refer to taking account of the SFRA level 2 (which has not yet been published) and further examples have site specific prescriptions e.g. Growth Area HH22.

Library Services

Provision of public libraries is a statutory requirement. HCC is committed to maintaining and modernising libraries across Dacorum to continue to meet the changing needs of service users and to cope with additional demand brought about by new development.

The Department for Digital, Culture, Media and Sport and the Local Government Association recognise that libraries change lives for the better and that they have a critical role in helping people to realise their potential, especially those from disadvantaged backgrounds. Libraries across Dacorum function as community hubs offering services and facilities to cater for a range of community needs including those of children, students, job seekers, and the They offer free, authoritative, non-judgemental information services and supported access to online resources and services, as well as providing access to books, DVDs, magazines, community language material, computers and the internet, an online reference service, ICT-based and other learning opportunities. They are neutral places that promote community health and wellbeing.

[HCC's Strategy for libraries](#)

Inspiring Libraries is HCC's ongoing strategy for the Library Service up to 2024. The strategy sets out the vision and direction for the service over a ten-year period and provides a framework for future decisions about service priorities.

The strategy is based on three main themes:

- The library as a vibrant community asset;
- The digital library; and
- The library as an enhanced gateway to reading, information and

The county council has the following policy ambitions and priorities for the next phase of the 'Inspiring Libraries' strategy':

- Improving library buildings
- Extending access to library services
- Developing technology
- Maintaining service delivery

HCC promotes libraries in three different tiers in order to clarify the services available to communities:

Tier 1 libraries are centrally located in large towns and offer the broadest range of stock and services, and the longest open hours. They are staffed by library staff; HCC invites volunteers to support the delivery of some services and activities. There is one Tier 1 library in Dacorum, this being Hemel Hempstead Library in The

Tier 2 libraries are located in smaller towns and provide core library services and a wide range of popular stock. Additional services are tailored to meet local need/demand. Tier 2 libraries are staffed during core hours; HCC seek to extend access through volunteer supervised self-service. There are two Tier 2 libraries in Dacorum, these being Berkhamsted and Tring Libraries, both based in the local town centre high streets.

Tier 3 libraries are located in smaller communities and villages and provide self-service access to library services, including the issue and return of books, access to computers/technology and study space and staff assistance via the LibraryLink service (video link to another library). HCC invites local communities to add value to these self-service facilities through volunteer support and the provision of additional activities and services as decided by the local There are four Tier 3 libraries in Hertsmere, these being Adeyfield, Leverstock Green, Bovingdon and Kings Langley Libraries

Future Library Provision in Dacorum

It is noted that the draft local plan provides for an increase of a total of 16,015 new dwellings across the borough, including 10,600 new dwellings in Hemel Hempstead, 2,200 in Berkhamsted and 2,700 in Tring. The number of libraries in Dacorum meets the current needs of the existing population and the county council has no plans to increase the number of service points in the borough.

However, it should be noted that any increase in the borough's population that arises arising from new developments that are likely to come forward from the site allocations contained within the draft local plan, will impact on library These include greater demand on adult and children's library stock, usage of public computers and other IT facilities and increased pressure on public circulation space within library buildings. New developments will therefore necessitate an increase in library service provision in order to take account of additional community demands arising from the draft local plan.

The county council will look to meet the increased library needs arising from the growing population by enhancing the existing provision at the tier 1 library in Hemel Hempstead as well as in Berkhamsted and Tring. The service may also need to increase capacity at Kings Langley and Bovington libraries, in order to allow for wider access to the residents of any new developments in these parts of the borough. Developer contributions will therefore be sought for service improvements appropriate to the scale and nature of proposed

In planning for any increased library provision to meet an increasing population, the county council will use established planning standards that are agreed nationally across the Public Libraries Sector. For example, there is a library standard which recommends the provision of 1,532 items per 1,000 population/average book price per person. These standards will inform the nature of any contributions that the county council will seek from developers to enhance the capacity of public libraries in Dacorum, in order to meet the needs of an increasing population.

YCH Services for Young People

YCH Services for Young People will continue to seek financial contributions for relevant projects where necessary, in order to ensure that support is available to young people in the Whilst Dacorum is a CIL charging area, Section 106 contributions will additionally be sought on larger, strategic sites where necessary.

Many young people using HCC services cycle to projects. The county council would be keen to see an improvement to the quality and continuity of cycling routes across Dacorum to encourage

Transport Evidence Base, Transport Topic Paper

Introduction (paragraph 1.2)

The package of interventions should focus primarily on encouraging the use of sustainable modes of transport, with priority given to improvements to walking, cycling and public transport over that of the private This will be important in achieving modal shift targets for the borough, and the text will need to be updated accordingly to reflect this.

Context

Text should be provided to introduce this chapter, as it just goes into talking about the transport Would be good to reorganise this chapter so that sustainable modes are outlined first and then the highway network described. By outlining the highway network first this gives the impression that this is more important than sustainable modes which it is not. More information also needs to be provided on the bus network across the borough as this has not be mentioned in the text.

Transport Vision for Dacorum

Hertfordshire Local Transport Plan 2018-2031 (paragraph 3.6)

Improvements to walking, cycling and public transport should be stated first and then improvements to highways. By outlining the highway network first this gives the impression that this is more important than sustainable modes which it is not as per the policies in HCC LTP4.

Hemel Garden Communities Transport Plan (paragraph 3.17)

It would be helpful to state here that more details on the potential interventions will be available once the transport work to develop a transport strategy (Stage 2) has been completed.

Current Movement Patterns Paragraph 4.2

As only Travel to Work data from the 2011 census has been used, the county council would question whether this gives an accurate picture of the current movement patterns across the For example, the data does not take into account other trips for different purposes such as education, shopping and leisure trips. Would also underestimate walking and cycling trips particularly for example those to train station etc. Might be an idea to investigate if there are any other data sources that could also be used for this analysis (e.g. Google Data and Strava Data)?

Walking (Tring and Berkhamsted)

With regard to the comment above in relation to other trips for different purposes such as education, shopping and leisure trips, it underestimates walking trips. Use of other data sources (e.g. Google Data and Strava Data)?

With regard to Figure 4-1, no detailed information has been provided in relation to movements within Tring and Berkhamsted as unlikely to walk between settlements and as such will give misleading results.

Walking (Hemel Hempstead)

With regard to the comment above in relation to other trips for different purposes such as education, shopping and leisure trips, it underestimates walking trips. Use of other data sources (e.g. Google Data and Strava Data)?

With regard to Figure 4-2, no detailed information has been provided in relation to movements within Hemel Hempstead as unlikely to walk between settlements and as such will give misleading results.

Cycling (Tring)

With regard to the comment above in relation to other trips for different purposes such as education, shopping and leisure trips, it underestimates walking trips. Use of other data sources (e.g. Google Data and Strava Data)?

Cycling (Berkhamsted)

With regard to the comment above in relation to other trips for different purposes such as education, shopping and leisure trips, it underestimates walking trips. Use of other data sources (e.g. Google Data and Strava Data)?

Cycling (Hemel Hempstead)

With regard to the comment above in relation to other trips for different purposes such as education, shopping and leisure trips, it underestimates walking trips. Use of other data sources (e.g. Google Data and Strava Data)?

After the walking and cycling analysis, there needs to be an analysis of the public transport data that has been done. There is a need to move sections on analysis of LENNON rail data and Bus Electronic Machine data to this

Summary of Key Mobility Issues (paragraph 4.38)

Need to use other data sources other than Travel to Work data from 2011 census as this may influence what the key mobility issues are as other trips for different purpose are missing and walking and cycling trips will have been

Planned Growth Sites

Hemel Hempstead (paragraph 5.40)

Although it mentions that growth is planned within the town centre, Two Water, West Hemel Hempstead and Marchmont Farm, it would be helpful to list details of the development sites in these areas as per Tring and

Implications of Growth Introduction

It is considered that this section is too detailed and would benefit from being simplified with the key

Paragraph 6.7

There is no consideration of walking and cycling trips in modelling and the overall impact that active travel modes can have in reducing car use. As active modes are not considered recommendations are likely to be highway-focused encouraging people to use the car. Although it is noted that the model outputs should not be the only means for identifying future transport measures it is not clear how active modes will be taken into account apart from a 'vision and validate'

Modelling Observations – Growth to 2036 (LP5)

Similar to the comments above, there is a lack of consideration for walking and cycling trips in

Modelling Observations – Additional Dacorum LP Run with Growth to 2036

Similar to the comments above, there is a lack of consideration for walking and cycling trips in

Provision of a new road to the north of Hemel Hempstead

There is a need to consider first the opportunities to maximise sustainable modes of transport and then determine the residual impact of vehicular traffic on the surrounding highway network using traffic modelling to see if additional highway capacity (i.e. a new northern corridor) is required. Based on the comments provided above sustainable modes of transport have not been taken into account in the

Modelling Observations-Impact of Growth (2036) on the Strategic Road Network

Similar to the comments above, there is a lack of consideration for walking and cycling trips in

Review of Emerging Transport Schemes Sustainable Transport Proposals

It should be noted that this is subject to transport work including Stage 2 of the Hemel Garden Communities work to develop a transport

Sustainable Transport Interventions

It should be noted that this is subject to transport work including Stage 2 of the Hemel Garden Communities work to develop a transport

QUESTION: Evidence Base comment	<p>No, it is the case that there are multiple recent factors which have not been fully taken into account when preparing this plan. It is understandable, when considering that a Local Plan takes years to develop that more recent evidence is not always considered in full. However, there have been a number of changes of significance which must be fully considered before this plan is brought before the inspectorate.</p> <p>For example, most of the evidence base for this plan was produced prior to the onset of COVID. As a result, major changes that are expected in working and shopping practices have not been considered. It is also the case that the renewed appreciation and need for public open space has not been examined.</p> <p>A large proportion of the evidence base doesn't account for the recent update in Climate Change science, a dire warning from the IPCC in October 2018 which insisted upon an accelerated pathway to net zero.</p> <p>There have been a number of recent proposals by Government which if adopted, will have a significant impact on our planning system. One of these was the change to housing targets nationwide, which were changed again mid consultation, and another is the changes to permitted development and the proposed 'white paper', which will alter the core of our planning system. Under the proposals, land is to be categorised as 'protect', 'renewal' and 'growth' and much of the power in making planning decisions will be shifted away from the local authority and local people. If green belt is released, as proposed under this plan, these rules would mean a change for that land from 'protect' to 'growth' and this would result in a significant loss of planning influence for the council and our local community. To protect against inferior developments this potential change will need to be considered in detail.</p>

QUESTION: Evidence Base comment	<p>I object to the housing plan on the grounds that it is disproportionate in the totals for each of the areas - Hemel Hempstead, Berkhamsted and Tring - and that the formula that has created these high target numbers is fundamentally flawed (see here: https://www.building.co.uk/news/jenrick-abandons-mutant-housing-algorithm-to-focus-on-urban-development/5109569.article).</p> <p>Dacorum, in conjunction with MHCLG, should revise the numbers and the plan and they should be significantly lower. Furthermore, in any revision there should be much more detail provided on infrastructure assessments and improvements (eg traffic, clean air and capacity of schools, GPs and social care etc) and how they will be provided, including through Section 106 agreements.</p>

The existing green belt and recreational locations, including all school playing fields should be protected and any development must prioritise brownfield locations or sites within existing built on areas. Where development is permitted in any future plan over this timescale, it should be clearly set out which sites are priorities in next 5-10 years and which will only be developed in the longer term (ie after this time).

There should be full economic assessments of where people will work, including impacts on travel and public transport as well as a comprehensive local economic development plan for Dacorum as a whole. This should include appropriate liaison and joining up with other local authorities and a clear understanding of where housing and local development strategies are complementary. This should include neighbouring boroughs and also major employment/economic centres nearby such as London and Milton Keynes. This is particularly important given the proximity of Dacorum to these locations (and its distance/isolation from other parts of Hertfordshire including the main centres within Herts CC).

Lastly, any developments that are permitted to take place within such a revised plan, should prioritise affordable housing and homes with the highest environmental standards. Plans should demonstrate how they will contribute to national and local 'net zero' targets not just through building standards, but also through energy usage and reduced car use including for commuting, access to schools, local recreational facilities etc).

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment	<p>Its Sustainability Transport Connectivity plan is scarcely worthy of the name. Hemel Hempstead has no sustainable transport system as DBC suggests. No provision for cross-town fast travel connection to the train station unavoidably means more private car use. Developments should seek to achieve a 60% share of sustainable transport modes by 2050. This indicates that there are no plans to integrate sustainable transport provision in the actual development plans. Until 2050 there will be unregulated traffic? There are no Hemel Hempstead-wide public transport and cycling lane provision in any of the plans. Just vague promises, unevidenced, slipshod claims and ultimately incoherent aspirations.</p> <p>With additional housing planned in East Hemel Hempstead under the jurisdiction of St Albans, traffic will hugely increase. There are no provisions in the St Albans Local Plan for public transport links and no discussions how these developments</p>

will impact Hemel Hempstead. This blinkered, non-contiguous planning will result in higher private vehicle use and represents a dereliction of duty to the town's infrastructure, which will come under increasing strain due to this unsustainable growth.

QUESTION: Evidence Base comment

I think the evidence base should be wider and more detailed: for example there is not sufficient evidence about using sites and buildings already within Tring for development or reconfiguration.

The Green Belt assessment is not up-to-date. The very specific contribution made by sites TR02 and TR03 to the Chilterns AONB immediately behind them, has not been taken into account.

The sites have not been assessed against the latest 2019 NPPFramework.

I think the whole environmental impact of using TR2 and TR3 should be much more closely analysed: for example, how any development would impact on views from Ashridge and Ivinghoe Beacon. The area is a very popular walking/recreational area for local residents and also tourists. The fact that it is designated an area of National Beauty must not be ignored.

Further, the evidence is not up-to-date because it is not clear how many houses are actually needed in Tring.

QUESTION: Evidence Base comment	<p>For the reasons stated in answer to the earlier questions in this questionnaire, the Council should review and update the studies that it seeks to rely on for the preparation of the next, formal stage of the Plan, its publication as a pre-submission plan that all parties will be able to formally support or object to. This is because many of the documents relied on by the Council for this Regulation 18 consultation are out of date in respect of fundamentally important considerations that should inform the Council's proposals for future development in the Borough.</p> <p>In particular, the Council should reconsider, and use the latest reliable information on:</p> <ol style="list-style-type: none"> 1 Population trends, including ONS projections; 2 Household formation trends, including ONS projections; 3 Shifts in demand and need for land and floorspace for retail, business and employment as a result of the Covid pandemic and Brexit, with a particular focus on retail and office based uses; 4 Potential for urban regeneration; 5 Potential for increased density of development in accordance with national planning policy and regulations; 6 Potential for more housing from changes of use and conversion of buildings in accordance with the latest government changes to regulations; 7 Measures necessary to include in the Plan in order to ensure that national and local policies and targets on Climate Change will be met; 8 Infrastructure requirements, especially for water supply and waste-water and sewage treat throughout the Borough. <p>The Strategy fails to recognise the Climate Emergency declared by the Council, including the consequences of removing 850 hectares of Green Belt, greenfield and urban open space for housing.</p>

QUESTION: Evidence Base comment	Insufficient infrastructure to sustain high growth numbers

The draft Infrastructure Development Plan (IDP) is woefully underdeveloped, which is very concerning given the 25% increased growth.

The proposed level of development in Dacorum, along with potential development in neighbouring St Albans City and District, Three Rivers District and in Buckinghamshire east of Aylesbury, would place an unacceptable burden on all types of infrastructure services and facilities in Dacorum. The plan as proposed does little to address the improvements in infrastructure required to support the proposed increase in housing. In particular, there are concerns regarding the impact on water supply and waste-water disposal. The level of new housing proposed is expected to put severe strains on water supplies to Dacorum during the 2020's under drought conditions. In these circumstances there would be no option but to extract additional water from the chalk aquifer, despite it already assessed as being "over-abstracted".

-

Major gap in transport plan between A41 and B440 (Leighton Buzzard Road)

The Transport Plan contained in the DLP is incomplete, and I have serious concerns about an increase in traffic through Potten End. Tring is projected to grow by 55%, and Berkhamsted by 25%. There is also a major development to the north of Hemel, called the "Hemel Garden Communities", which will comprise 1,550 homes built over the next 17 years, and a further 4,000 afterwards. Also envisioned is a potential new link road from J8 on the M1 through the new garden community to the B440 (Leighton Buzzard Road). A reference is also made to this new link road being utilised by Tring and Berkhamsted residents to access the M1. However, there is no consideration at all given to how those residents get to the B440 in the first place. The obvious answer is via Potten End. This will lead to a considerable increase in traffic through the lanes of the village, not only because of the substantial growth of the adjoining settlements, but also because the changes in the Hemel Hempstead road layout will make it harder to access the A414/M1 through Hemel (reduction of lanes on the A414). This will funnel even more traffic onto cross-country lanes. This is particularly the case for HGV vehicles which are prohibited from coming from the north via Water End Lane and from the south through Warners End (via Galley Hill) – in both cases because of weight restrictions on the relevant roads. Potten End has seen a noticeable increase in this type of traffic over the past few years since those restrictions have come into force.

QUESTION: Evidence Base comment

We are writing to object to the plan for development in Dacorum for the following reasons:

The number of houses proposed for development per year until 2038 is based on figures produced in 2014, we understand that this proposes a figure of 1,023 houses being built in the area. These figures are now outdated and we're superceded by ONS figures produced in 2018 which only proposed 355 houses per year built. The government figures given need to be challenged by yourselves on this basis. In addition, the figures derived are not the objectively assessed for our area.

Secondly, green belt has been defined as land that can only be developed upon in exceptional circumstances. Despite the statement in the plan, the simple need for extra housing cannot be defined as exceptional.

Thirdly, resources cannot support the extra houses currently and there is nothing in the plan that states how this will be resolved. In particular, water extraction is at the maximum it can support without the extra supply that will be needed for these developments.

Fourthly, there has been insufficient effort to locate brownfield sites in preference to releasing greenfield sites for development.

Fifthly, the proportion of social housing proposed is far too low in comparison with the waiting list of 7,000 awaiting housing. It should be ensured that housing meets the needs of the people looking to be housed locally.

We are also concerned that there has been insufficient publicity of the plan to ensure that people know what is happening. It is apparent that a significant number of people did not receive a copy of the plan in the post. We did not receive one and had to request it very late on in the available time for consultation because we were unaware of it.

Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law". The same should be done for Dacorum.

QUESTION: Evidence Base comment

I write to object to the proposed Dacorum local plan.

The number of houses proposed for Dacorum will alter the character of the area from rural with defined villages and market towns to a suburban sprawl. No explanation has been put forward justifying this detrimental change.

I am in particular shocked at the proposed massive expansion of Tring. We are all accustomed to new building and resigned to new housing estates built in the new placeless vernacular of the large developers, but the scale of the proposed changes is unacceptable.

The great achievement of post war planning is to prevent urban sprawl, using the Green Belt to keep towns distinct and separate. The proposed developments between Berkhamsted and Hemel Hempstead suggest that councillors and officials have failed to comprehend the legacy handed down to them and have no intention of living up to it.

I understand the grounds by which Green Belt land may be released for development and do not consider these to have been met. I do not have confidence in the council's forecasts of housing need or the analysis on which these are based; nor do I have confidence that these are robust as a forward-looking exercise given the as yet unknown effects of the pandemic on patterns of work and family formation, on the apparent migration from London and the resulting changes to the capital, on the future requirements for currently commercial premises in our towns, and on the effects of population size in the wake of Covid and Brexit, with the Economic Statistics Centre of Excellence having recently estimated that 1.3 million foreign-born residents have left the UK.

Given this uncertainty, it seems shortsighted to 'lock in' the destruction through irreversible change of a much cherished area by reliance on estimates that simply cannot bear the weight being placed on them.

I am acutely conscious of the environmental impacts inherent in the proposed plans. In particular, the effect on the chalk streams within the area will be profound. The dry upper reaches of the river Ver upstream from St Albans should be a minatory lesson for all involved in this decision and I urge all officials and councillors involved to walk this route and subsequently justify to themselves and residents why this should be inflicted on the rivers Gade and Bulbourne.

QUESTION: Evidence Base comment	<p>Its Sustainability Transport Connectivity plan is scarcely worthy of the name. Hemel Hempstead has no sustainable transport system as DBC suggests. No provision for cross-town fast travel connection to the train station unavoidably means more private car use. Developments should seek to achieve a 60% share of sustainable transport modes by 2050. This indicates that there are no plans to integrate sustainable transport provision in the actual development plans. Until 2050 there will be unregulated traffic? There are no Hemel Hempstead-wide public transport and cycling lane provision in any of the plans. Just vague promises, unevidenced, slipshod claims and ultimately incoherent aspirations.</p> <p>With additional housing planned in East Hemel Hempstead under the jurisdiction of St Albans, traffic will hugely increase. There are no provisions in the St Albans Local Plan for public transport links and no discussions how these developments will impact Hemel Hempstead. This blinkered, non-contiguous planning will result in higher private vehicle use and represents a dereliction of duty to the town's infrastructure, which will come under increasing strain due to this unsustainable growth.</p>

QUESTION: Evidence Base comment

I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrarily done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law

However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment

Do you agree that the evidence base that accompanies the plan is adequate, up to date and relevant?

Due to Covid-19, we are living through a period of rapid evolution with the full impact yet to be assessed. It is almost impossible for the full impact to be assessed as yet, but there are indications that there will be less demand for retail and office space in town centres, freeing up much brownfield land for development. Many families may choose to move further from the South East as they can now work remotely.

There has been a change to the way the housing target figure was produced mid-consultation. This includes plans to categorise land as ‘protect’, ‘growth’ and ‘renewal’ areas. The plan to release significant Green Belt land into the hands of developers would risk these highly valued areas becoming growth areas. This is a serious risk to the Green Belt — it would result in a significant loss of planning control to local authorities and local residents and permanently blight our valued landscape.

The Glover report has been ignored — this has recommended that the Chilterns AONB becomes a national park — we do not want a sprawl of executive housing estates encroaching on the AONB.

QUESTION: Evidence Base comment	<p>I do not believe that the Evidence Base is up to date or accurate.</p> <p>The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.</p> <p>The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.</p> <p>The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.</p> <p>Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date 2018 data.</p>

QUESTION: Evidence Base comment	The numbers are questionable. The government initially based the numbers on a formula now known as 'The mutant algorithm'. In December the government announced it would ditch this algorithm — many reasonably thought that the proposed numbers in the local plan would therefore fall. BUT THE GOVERNMENT CHANGED THE STATISTICS TO JUSTIFY THE NUMBERS ANYWAY — THE NUMBERS OF PROPOSED HOUSES HAVE THEREFORE INCREASED...

QUESTION: Evidence Base comment	<p>The council's Green Belt assessment is not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework and the internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>The council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p> <p>The fundamental aim of the Green Belt policy is to contain urban sprawl by keeping land permanently open; essential characteristics of Green Belts are their openness and permanance. The council's plan would shatter the Green Belt in this area of Tring destroying the openness and permanence of the beautiful countryside. Once destroyed it cannot be restored. There are alternatives that should be considered.</p>

QUESTION: Evidence Base comment	<p>Major gap in transport plan between A41 and B440(Leighton Buzzard Road)</p> <p>The Transport Plan contained in the DLP is incomplete, and I have serious concerns about an increase in traffic through Potten End. Tring is projected to grow by 55%, and Berkhamsted by 25%. There is also a major development to the north of Hemel, called the “Hemel Garden Communities”, which will comprise 1,550 homes built over the next 17 years, and a further 4,000 afterwards. Also envisioned is a potential new link road from J8 on the M1 through the new garden community to the B440 (Leighton Buzzard Road). A reference is also made to this new link road being utilised by Tring and Berkhamsted residents to access the M1. However, there is <u>no consideration at all</u> given to how those residents get to the B440 in the first place. The obvious answer is via Potten End. This will lead to a considerable increase in traffic through the lanes of the village, not only because of the substantial growth of the adjoining settlements, but also because the changes in the Hemel Hempstead road layout will make it harder to access the A414/M1 through Hemel(reduction of lanes on the A414). This will funnel even more traffic onto cross-country lanes. This is particularly the case for HGV vehicles which are prohibited from coming from the north via Water End Lane and from the south through WarnersEnd (via Galley Hill) – in both cases because of weight restrictions on the relevant roads. Potten End has seen a noticeable increase in this type of traffic over the past few years since those restrictions have come into force.</p>

QUESTION: Evidence Base comment	<p>The situation in the UK is constantly changing. The effect of Covid 19 on the UK economy has far reaching repercussions. Retail, hospitality and workplaces have all been hugely impacted. How we shop and work may have changed considerably</p>

in future. We may no longer need the volume of office and retail space deemed essential in the past. This could offer new opportunities for re-purposing buildings for residential use as well as releasing commercial land for housing. This could reduce the pressure to build on green field and Greenbelt land.

It does seem to me that the scale of development proposed cannot be compatible with current thinking on climate change and reduction of carbon emissions. It just doesn't add up: the impact on quality of life and wildlife habitats, increased traffic causing air pollution and high carbon emissions, the carbon released by construction on this scale, the lack of infrastructure to support such development, the loss of green spaces which provide vital breathing space, helping to mitigate carbon emissions.

QUESTION: Evidence Base comment

General Comment

The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.

The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.

The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.

Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date 2018 data.

QUESTION: Evidence Base comment	<p>—Due to Covid-19, we are living through a period of rapid evolution with the full impact yet to be assessed. It is almost impossible for the full impact to be assessed as yet, but there are indications that there will be less demand for retail and office space in town centres, freeing up much brownfield land for development. Many families may choose to move further from the South East as they can now work remotely.</p>

— There has been a change to the way the housing target figure was produced mid-consultation. This includes plans to categorise land as ‘protect’, ‘growth’ and ‘renewal’ areas. The plan to release significant Green Belt land into the hands of developers would risk these highly valued areas becoming growth areas. This is a serious risk to the Green Belt — it would result in a significant loss of planning control to local authorities and local residents and permanently blight our valued landscape.

— The Glover report has been ignored — this has recommended that the Chilterns AONB becomes a national park — we do not want a sprawl of executive housing estates encroaching on the AONB.

QUESTION: Evidence Base comment Apparently the scale of the development is based on an outdated assessment of need from a ONS survey of 2014. However an ONS survey of 2018 suggests the need is for about half the number of dwellings.

This factor alone means the whole scheme needs to be re-evaluated.

QUESTION: Evidence Base comment	<p>I write to reply to the consultation on the Dacorum Local Plan, 2020-2038. I wish to object to the development as currently proposed.</p> <p>Outdated assumptions</p> <p>In my business experience, a plan is only as good as the assumptions in which it is based. By using housing projections from 2014, rather than more recent ONS data from 2018, the amount of housing required in our area may be significantly overstated. I understand that Central Government has instructed you to use the 2014 projections, but I wonder if there is scope to resist this, on the basis that it may lead to over-development, including unnecessary erosion of Greenbelt land. We are also about to embark on a Census - might this not present an opportunity to await its publication and base your projections on the most up-to-date information available?</p> <p>I accept that the Dacorum area should take its fair share of new housing. However, I am concerned that the current plan is based on outdated assumptions.</p> <p>I invite the Council to revisit its projections based on more current information.</p>

QUESTION: Evidence Base comment	<p>The current Local Plan relies on outdated data, from a study in 2011 – which showed potential problems with water supply / drainage. The revised Local Plan must make it clear what impact the development proposals will have on this, as well as sewage – especially if after review there is still a greater number of housing suggested.</p> <p>The level of new housing currently proposed is expected to put severe strains on water supplies to Dacorum during the 2020s under drought conditions. In these circumstances there would be no option but to extract additional water from</p>

the chalk aquifer which in turn would cause further damage to the Borough's precious chalk streams. New supplies of water are not likely to be possible until after 2030.

The growth proposed by the Strategy would require substantial infrastructure improvements in order to transport and treat wastewater and sewage. This might take at least ten years to complete, and be extremely expensive as well as disruptive to affected communities.

QUESTION: Evidence Base comment

I understand it is important to re-analyse the statistics behind the Local Plan in terms of the impact on housing targets and algorithms on individual council areas as compared to similar areas nationwide, in the south of England and bordering London.

Also to consider the methodology behind Dacorum's targets and on the choice of 2014 ONS housing estimates as the baseline rather than the more recent 2018 estimates.

QUESTION: Evidence Base comment	<p>The Evidence base is not up-to-date and relevant. The Council should:</p> <ul style="list-style-type: none"> • use the latest 2018 ONS projections including population trend data and household formation data in calculating housing need;

- analyse and take into account shifts in demand and need for land and floorspace for retail, office and employment as a result of the pandemic, recognising that a significant shift towards remote working and working-from-home is likely to be sustained and cause a reduction in demand for retail, office and employment uses; and
- take into account the latest evidence on housing need being met through 'windfall' delivery, with the average over the past three years (322 dwellings per annum) serving as a baseline and then factoring in a likely increase from the impact of both the pandemic and recently expanded permitted development rights to convert office and retail space to residential use.

QUESTION: Evidence Base comment

I consider the council' s Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council' s assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	I do not agree that the Evidence base is up-to-date, as is proven numerous times by local Councillors. The ONS (Office for National Statistics) has provided household projections most recently in 2018. This plan is based on older out of date ONS projections from 2014. Being 7 years old!

As this impacts the town and its residents in so many negative ways, it should be mandatory that the projections are based on the most up to date information.

Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS date would likely reduce to less than 500 per annum using the most 2018 projections. A more than 50% reduction!

QUESTION: Evidence Base comment

- AECOM Site Assessment Study – A key flaw in the AECOM site assessment work is, as we have noted above, its wholly illogical conclusions and lack of rigour in respect of two key issues, namely Green Belt and heritage, as follows:
- Green Belt – the conclusion that the site “performs very poorly in Green Belt terms” is simply not borne out either by the preceding analysis in the report, or by any objective analysis when the level of containment and relative position in respect of adjoining development are taken in to account. Moreover, this conclusion is wholly at odds with the analysis in the Sustainability The SA correctly identifies

that Duckhall Farm has a “sense of enclosure” and separation from the wider landscape (i.e. in Green Belt terms it is more contained), and also correctly states in respect of Grange Farm that “development at this prominent location would extend Bovingdon into the countryside”, the AECOM report somehow contrives to come to the opposite conclusion and

suggest that the Duckhall Farm site has the greater impact. This is nonsensical, and the two assessments are clearly at odds with each other;

- Heritage – the AECOM study shows in Volume 2 that with a set-back to the adjoining Listed Buildings, heritage issues can be addressed, and yet still scores the Duckhall Farm negatively in this respect despite having identified and taken in to account the relevant mitigation. The negative conclusion in respect of heritage impact is therefore not internally consistent with the design work in Volume
- Accessibility – the AECOM report rightly notes that the Duckhall Farm site has “good” access to local facilities whereas the Grange Farm site has “reasonable” However, as per our previous comments, not only is the assessment of

“reasonable” in respect of Grange Farm highly questionable given the lack of lit and convenient routes, the AECOM appraisal does not properly grasp the significance of the distinction that it makes in this regard – that one site is likely to promote safe walking and cycling in to the village centre and therefore not exacerbate congestion on the High Street, and the other is likely to generate frequent local car trips to the High Street because the options for walking and cycling are on;t, at best.

“reasonable”.

- DBC Site Selection Topic Paper – the DBC site assessment report contains many of the same flaws as the AECOM report, but also relies on erroneous conclusions regarding infrastructure Particular comments at this stage include:
- Green Belt – the DBC assessment of relative impact on Green Belt relies primarily on the findings of the wider Green Belt study and the way that assessment considered wider land parcels in terms of Green Belt purposes. As we have repeatedly pointed out, at the site selection stage, sites need to be assessed in terms of their actual individual impact on the Green Belt, not the impact of the wider parcel of land assessed for the purposes of the Green Belt study. It is the parcel of land that is proposed for removal from the Green Belt where the impact occurs, not the remainder of the strategic parcel, and therefore reliance on the wider strategic assessment is flawed. On a like for like basis, looking at land take and impact on the openness of the Green Belt around Bovingdon, there is no doubt that Grange Farm has the larger adverse impact (a conclusion that is supported by the findings of the SA, as discussed above);

- Heritage – as with the AECOM study, the DBC assessment identifies that mitigation can be provided to address the impact on heritage assets, indeed it goes further and accepts explicitly that heritage impacts can be sufficiently mitigated and indeed that in some respects the setting of heritage assets could be enhanced, but then (a) makes the erroneous comment that this may affect development quantum, which ignores the AECOM capacity study which shows this is not the case and (b) still refers to potential adverse heritage impact in the conclusion, which is not borne out by the analysis presented;
- Accessibility – the DBC study correctly identifies that the Duckhall Farm site “is in reasonable proximity to existing services and facilities on Bovington High Street”, but, as with the AECOM and SA work, fails to spot the inherent difficulties in providing safe and secure pedestrian routes between the High Street and Grange Farm, in addition to failing to address the relative distance that Grange Farm lies from the main village services;
- Undeliverable Infrastructure – Fundamentally, the selection of Grange Farm appears to have been based in large part upon an expectation of benefits arising from that scheme which cannot be secured, or which do not actually provide any wider benefit. In particular, we have noted that the attempt to secure a 3FE primary school site will fail because there is no need for such a site and it cannot be legally bound under the CIL Regulations. In respect of the alleged drainage benefits, the same issues apply – any ‘over extra’ benefit in terms of existing drainage conditions would be minimal as the performance requirement for any drainage scheme in this instance is nil net detriment i.e. no greater than greenfield run-off, and any attempt to impose a higher requirement to satisfy wider existing issues will not be legally

enforceable. Finally the proposed ‘park’ in this location would have limited wider benefit to the village as the site is so peripheral to the majority of existing residents.

As the above shows, the Council is essentially relying on three different pieces of work in respect of site selection – the SA, the AECOM analysis, and its own analysis. The three different pieces of work provide inconsistent pieces of analysis in key respects, but all of them suffer deficiencies. In some cases the deficiencies are common to all (for example the lack of appreciation as to what the difficulties of providing safe and convenient pedestrian access to Grange Farm means in practice). In some cases the deficiencies are internal to the individual studies (conclusions not reflecting the preceding analysis). In some cases the deficiencies relate to the lack of consistent findings (the manner in which Green Belt impacts are considered, for example). The combination however is a flawed and inconsistent evidence base that does not support the chosen approach to site selection.

QUESTION: Evidence Base comment

The algorithm method for calculating housing need which has been used by the Council is not the correct means to calculate the housing needs of the Borough. The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. The Council has wrongly based its calculations on the outdated 2014 based ONS data which will result in a significant overestimate of housing needs and brings into question the soundness of any local plan which is based on them. I would remind the Council that on Wednesday 16 December the government published its response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%.

The Government also said:

"Within the current planning system the standard method does not present a "target" in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

QUESTION: Evidence Base comment

The Emerging Strategy for Growth appears to be based on selective strategy documents* that have no formal planning status and which have not been widely consulted on. As a result, the Strategy has failed to take account of a number of important issues - the climate emergency, the environmental impact of the proposed development and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan, should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.

*Dacorum Growth & Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan

The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents. This will ensure much greater emphasis should be given to regeneration of previously developed land in order to reduce the amount of housing and employment development on Green Belt and other greenfield sites outside of existing towns and villages.

Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan. Dacorum Borough Council declared a climate emergency more than a year ago. Despite this and some well-intentioned promises, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans. Words of 'encouragement' are insufficient and no substitute for detailed carbon budgets and committed targets of local carbon reductions. This is a requirement of the National Planning Policy Framework (NPPF) and the 2004 Planning & Compulsory Purchase Act. A carbon reduction plan or pathway is required to meet the current national climate obligations of net zero by 2050 and this work should underpin a revised land use and development strategy.

QUESTION: Evidence Base comment

The numbers are questionable. The government initially based the numbers on a formula now known as 'The mutant algorithm'.

In December the government announced it would ditch this algorithm — many reasonably thought that the proposed numbers in the local plan would therefore fall. BUT THE GOVERNMENT CHANGED THE STATISTICS TO JUSTIFY THE NUMBERS ANYWAY — THE NUMBERS OF PROPOSED HOUSES HAVE THEREFORE INCREASED...shocking!

QUESTION: Evidence Base comment	I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's

assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrarily done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	<p>The Council has used the outdated 2014 based DCLG data of household projection, resulting in an over-estimate of housing need, and therefore invalidates the proposed housing growth. Using the 2018 ONS population and household projections a more realistic estimate would be between 351 and 536 houses pa in the Plan period. And the Council has failed to consider recent trends in local population and number of households.</p> <p>It has also used the 2010 Water Scoping Study. This is also now outdated, especially given that climate change is accelerating.</p> <p>Also, using the Dacorum Growth & Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan documents, which have not been consulted on and have no formal planning status has meant that the DBC Emerging Strategy for Growth fails to take sufficient account of the climate emergency, the environmental impacts and fails to prioritise brownfield sites. The Plan is focussed much more on economic growth rather than sustainability and protection of the environment, even where this is a legal requirement for DBC.</p>

QUESTION: Evidence Base comment	<p><u>Open Space designation, quality of research</u> Your Local Plan Emerging Growth strategy 2020-2038 Draft Proposals Map shows a large area of 'Open Space' between the Grand Union Canal and the Highstreet near Durrants Lane, this is a <u>Private House and Garden</u> , according to the Study you commissioned 'Dacorum Borough Council</p> <p>Open Space study assessment report July 2019 by Knight Kavanagh & Page Ltd' private gardens do not qualify as Open Space and was not identified by them as open space, after all it is not available to the public as allotment, as part of a school or for recreation, neither is it a green corridor. So why is it shown on your plan? Furthermore I do not think the heavily built up school sites should be included, playing fields should be but not the hardstanding or buildings.</p> <p>This implies your calculations are wrong and that Berkhamsted and Northchurch are even more impoverished for Urban Open Space than shown. Therefore additional protection needs to be given to the informal recreation routes we enjoy such as the upper part of Bell Lane and Shootersway which connect through to the wider countryside and its network of lanes and footpath including the Chilterns Cycle Route.</p> <p>A second anomaly/error is that Bell Lane is designated an 'important thoroughfare' that is road. When it is a very poorly maintained single track road with few passing places.</p> <p>The errors bring into question if the research on which the plan is based is robust, and if instead the plan should be declared unsound.</p>

QUESTION: Evidence Base comment

I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	<p>Herts LEP asks for the following to be considered in relation to the evidence base</p> <p>1 Additional Context – Expanded policy research</p> <p>1.1 We ask that the emerging Local Plan be appropriately informed by additional policy research which underpins a number of critical employment related issues. These are summarised in Appendix 1 but relate to the following:</p> <ul style="list-style-type: none"> - Herts LEP - The Herts Economic Recovery Plan (August 2020) - KPMG – The Future of Towns and Cities in the UK Post Covid-19 (January 2021) - Herts LEP - Hertfordshire Key Sites Report (March 2020) <p>2. Additional Context – Dacorum’s employment activities in a wider context</p> <p>2.1. We think it important to provide a wider context to Dacorum by covering some Hertfordshire wide indicators of key sector strengths which add significant value to the Hertfordshire economy. These are set out in Appendix 2.</p> <p>1 Herts IQ including Maylands – Herts IQ aspirations and initiatives to promote high quality investment in key sectors</p> <p>3.1 Appendix 3 sets out the aspirations of Herts IQ to create quality outputs and the measures that are being put in place to underpin these.</p> <p>1 Herts IQ aspirations for specific Maylands Business Park Development Sites</p> <p>4.1 In Appendix 4 we list the development sites critical to meeting Herts IQ objectives.</p> <p>1 Decarbonisation initiatives through use of renewable energy – a possible exemplar based at Maylands Business Park</p> <p>5.1 Herts IQ is currently progressing initiatives in relation to this; such details as can currently be provided are set out in Appendix 5.</p>

1 Sector demand studies at Herts IQ

6.1 Herts IQ is currently engaged in studies into likely investor demand for development sites in Herts IQ and the influence that could be brought to bear on this; such details as can currently be provided are set out in Appendix 6.

Appendix 1 – Key Additional Policy Context in relation to the emerging Dacorum Local Plan

A. Herts Economic Recovery Plan (Herts LEP August 2020)

A.1 We would welcome the ESG making reference to the Plan as part of the way in which it seeks a response to the pandemic. The LEP's Herts Recovery Plan (August 2020) provides a rapid and focused analysis of how the county can respond to the vulnerabilities that the COVID-19 pandemic has exposed, and the threats it has posed to our way of life – both socially and economically.

A.2 The Plan recognises that any response must acknowledge that Hertfordshire has both assets and opportunities that will provide the foundations for renewal and growth. It is structured around main three short/medium term Delivery Packages (fashioned to work in tandem with government sponsored interventions) coupled with two Transformational Programmes for longer term action, reflecting what is set out in the LEP's draft Industrial Strategy.

A.3 Both Herts IQ, Hemel Garden Communities and other employment and enterprise initiatives within Dacorum are expected to contribute to both wider and focused initiatives to promote economic recovery.

B. KPMG – The Future of Towns and Cities in the UK Post Covid-19 (January 2021)

B.1 A number of commentators are starting to visualise what the UK and indeed the wider world will look like when (or possibly if) the Covid-19 is eradicated or brought under control. Any studies at this time must be heavily caveated, as simply nobody can know when that can be and also cannot be certain what any recovery will 'recover to' – it is probably safe to assume there are numerous parallel scenarios that can be conjured up.

B.2 Additionally, we should perhaps recognise that Covid-19 is potentially being used as a 'piggy back' of changes in policy, funding support etc that landowners, businesses and developers were already pushing for to serve their own and their clients' interest.

B.3 The KMPG study starts with a broad assessment of the changes in business practices the pandemic has wrought, with a broad assessment of implications. It is not backed up by detailed evidence but provides a useful perspective from a major company that is experiencing first-hand the implications of the virus in real time along with other businesses. The study concludes the following:

- foregoing most business travel allows companies to save costs and gave workers more time to focus on their core tasks, potentially making them more productive
- The proliferation of virtual meetings also enabled broader access to specialist advice and analysis is now almost always available anywhere in the world at short notice (and at much less expense as travel costs and travelling time are avoided)

- Suspending the daily commute enables workers to save time and money, allowing many to work more flexibly
- However an obvious downside of this is a blurring between work and home life
- The deep recession triggered by the pandemic has squeezed profit margins across a swathe of businesses, with companies responding in part by reducing property commitments, sometimes significantly
- Some businesses, (including, KPMG notes, its own) have gone down the route of transforming their offices into collaboration hubs, where many workers will come to meet rather than sit at a desk and perform tasks individually.
- Surveys show that most workers would prefer to return to a hybrid mode of work combining days with clients and colleagues in the office and days at home

B.4 KPMG then considers the implications of this in relation to towns and cities. The report notes a corresponding collapse in retail activity in these locations but does not go into the post Covid-19 implications of this directly; instead, it focuses on what it thinks are the likely decline in town centre jobs, as it considers that many of the changes identified in B.3 above are irreversible (or only partially reversible).

B.5 Based on its analysis (which is not set out in the report) of 109 towns and cities, Hemel Hempstead is joint equal (with another new town, Bracknell) in standing to lose the most town centres jobs – 27.4% in all. Other South West Herts towns also suffer disproportionately, with Watford 4th and St Albans 19th in terms of highest losses.

B.6 When other impacts are factored in – the loss of retail jobs due to online shopping increases sustained post pandemic and what KPMG calls *'the strength of cultural offering'* (the presence of existing facilities such as sports facilities; culture and recreation assets (ranging from amusement parks to museums and performing arts venues); and hospitality venues (including restaurants, cafe, pubs and bars), Hemel Hempstead stands to be the second worst affected of all 108 towns and cities surveyed.

B.7 The KPMG take on this is that whilst food retail rents will remain high, non-food retail rents will fall substantially, opening up prime town centre space for conversion to higher education, community and residential uses.

B.8 In terms of impact of online shopping, the report suggests the following:

- Online sales have grown by 50%+ in nine months to January 2021, accelerating a trend that would have taken five years plus to deliver in normal circumstances.
- It is expected that 40-50% of all non-essential retailing will be transacted online going forward, up from around 30% pre-COVID. This is just a continuation of a trend that has seen over the last 10 years
- KPMG consider that 50-60% of transactions will be conducted in stores, which represents a reduction from the 65% penetration seen in non-food online during the first lockdown
- Alongside online, convenience stores have been key beneficiaries of the COVID pandemic and although standalone 'big box' locations have also benefitted, this may only be temporary and the decline in sales values in these locations witnessed pre-COVID are likely to resume
- The big structural change in online retailing is within the food: pre-COVID penetration was at 6.5%. It now stands at approximately 15%, with further growth to 20-25% possible, and these levels are here to stay

- As grocery represents 50% of the overall UK retail market and there are tens of thousands of grocery stores in the UK grocery stores in the UK this will lead to major implications, with locations needing to be downsized and/or re-purposed into micro-fulfilment hubs
- Shoppers tend to be attracted to a cluster of shops rather than make a visit to a single, standalone outlet, so as the high street's retail offering thins, remaining shops may need to regroup to attract shoppers' attention

B.9 KPMG's conclusions are: *"The structural challenges to city centres mirror the challenges facing transport networks post-COVID as the drop in footfall is reflected in falling passenger numbers. Fostering collaboration between businesses and local policymakers can help rethink the journey to work with a focus on lower carbon, more customer-orientated and better-connected transport networks. Other important areas include prioritising investment in high-speed broadband and 5G connectivity. As we leave the pandemic behind, hopefully sometime in 2021, towns and cities across the UK will need help and space to rethink the purpose of their centres. High streets will need to be reimagined as cultural and recreational hubs that will act as magnets for businesses and jobs able to transform less prosperous areas."*

C. The LEP's Key Sites report (March 2020)

C.1 Published at the start of the pandemic (and noting that the potentially significant consequences of COVID-19 made its recommendations even more pertinent) the Key Sites report was prepared against the background of the considerable loss of office and industrial floorspace over a 10 year period – some 7 million sq.ft. – with losses doubling in the last 5 years.

C.2 Other indices show however a general flourishing of the Herts economy over that period, with a 40% growth in the number of enterprises, a 25% growth in jobs, a 45% growth in GVA and a 8.5% growth in GVA per job filled.

C.3 Whilst these figures are encouraging, there are serious concerns about the ability to maintain growth unless there is a concurrent effort to stem employment space losses.

C.4 In terms of Dacorum The Key Sites report noted that:

- according to BRES data, Dacorum experienced an 8% growth in numbers employed within the district 2015 and 2018, just below the Hertfordshire figure of 11%

- Maylands Business Park (with a Gross Floorspace Area of 2,165,411 sq.m) is the largest employment area in Hertfordshire (the next two in size are 1,804,064 sq.m. and 1,308,978 sq.m.)

- The Business Park employed 18,800 people in 2018, 27% of all employment in the district (only 2 of the county's 18 key sites employ a greater proportion of the district total)

C.5 Whilst the report suggests that some pragmatism relating to the loss of employment space is necessary, in that it needs to be acknowledged that some of the floorspace lost in the recent past was outdated and/or poorly located. Additionally, modern technology can mean that future employment activity may need less permanent business floorspace, so the aim should be protect, enhance and extend certain spaces whilst accepting that lower quality provision can be lost.

C.6 The report stresses the action needed to stem and reverse the recent loss of employment space in the county by pursuing positive measures to promote the development and regeneration of Hertfordshire's 17 Key Employment sites, of which Maylands/East Hemel Hempstead is one.

C.7 The report's Strategy and Action Plan identifies bespoke measures required to deliver these benefits; the Maylands/East Hemel Hempstead key site is considered as a potential exemplar for other sites given the current focus on promoting a number of Hertfordshire's specialist clusters, advance masterplanning, dedicated resources to promote marketing and the pursuit of leading edge infrastructure investment.

Appendix 2: Dacorum's economy activity in a wider Hertfordshire context

D.1 It is essential to view Dacorum's economic activity not in isolation but as part of a fully functioning economic ecosystem operating within Hertfordshire. The county's economy is heavily defined by the scale and diversity of its scientific research and other knowledge-based assets that underpin the county's economic growth and prosperity. As a hub for scientific research, these Hertfordshire specific characteristics – generally considered to be strengths – focus primarily on a dynamic group of world-leading, research-intensive businesses – GSK, Airbus, MBDA, Roche, Eisai and Johnson Matthey as well as many others.

D.2 Around these and other major players, a series of overlapping innovation environments - characterised as clusters - have evolved. These are defined around 5 key sector specialisms:

- **Life sciences** including a major focus on cell and gene therapy in and around Stevenage, Welwyn Garden City and Hatfield
- **Advanced engineering and manufacturing** – which has as its heritage the defence industry operations such as that of BAe (formerly in Hatfield) but has now substantially broadened out and frequently has a strong IT and IA component
- **Smart construction** which is embracing the commercial opportunities resulting from adoption of new methods, materials and technologies across the construction industry, as it rapidly evolves to address the challenges of sustainability, accelerating housing delivery and skills constraints. This is supported by local - and global - sector leader BRE, part of the government funded Construction Innovation Hub consortium to lead national sector innovation over coming years
- **Agri-tech/science** involving the development of new technologies in agriculture, horticulture and the impact of climate change on farming, with the aim of improving yield, efficiency and profitability, where there are substantial crossover benefits and synergy to be derived from partnership with Rothamsted Research
- **Creative Industries**, particularly film and TV, with the presence of Leavesden Studios and Elstree Studios within the county

D.3 Overarching these specialisms is 'Green Employment' or 'Green Tech' – newly emerging investment in the green economy which has at its heart the imperative to reduce the impact of climate change and, more specifically, to achieve high levels of decarbonisation. Green Tech cuts across all employment activity and will increasingly be seen as the dominant business activity.

Appendix 3: Herts IQ aspirations and the actions being taken to support them

E.1 Hertfordshire Innovation Quarter - or Herts IQ - is the name for Hertfordshire's Enterprise Zone and was formerly known as the Herts Enviro-Tech Enterprise Zone. The term 'enviro-tech' - short for environmental technology - is no longer actively used in marketing of the site, although Herts IQ is actively targeting companies operating in environmental technology fields, particularly in agritech/science and smart construction. The targeting of these sectors is supported by the excellent sector leadership of Herts IQ partners Rothamsted Research for agritech/science, BRE for smart construction, and also the research and educational strengths of the University of Hertfordshire.

E.2 The Herts IQ Enterprise Zone was given formal designation by government in April 2017 and will operate over a 25 year period. It is output driven and has a target to deliver new jobs within a focus on the sector specialisms identified above.

E.3 Governance of Herts IQ is in the hands of a Partnership Board of seven organisations: Hertfordshire Local Enterprise Partnership, Hertfordshire County Council, St Albans City & District Council, Dacorum Borough Council, BRE, Rothamsted Research and the University of Hertfordshire. There is a high degree of commitment from partner organisations to delivering the agreed outputs and it is important that these objectives are maintained in all spheres, but particularly in the plan making process.

E.4 We would ask for the emerging Local Plan to support Herts IQ rollout through policies which stress the need for actions to support successful long term investment in key economic activities being promoted by Herts IQ partners. The keys to such success will be to require:

- top quality infrastructure and environmental standards to be adopted
- leading edge technologies put in place from the outset to support and promote investment (e.g. in the digital economy)
- investment to be secured in sector specialisms
- a high quality business offer to established and maintained through the avoidance of any activities that are likely to discourage investors[1]

E.5 To ensure achieve the above we consider a number of proactive measures are needed (and which Herts IQ is already pursuing) and these should be reflected in the Local Plan to reinforce messages the partners are promoting. These are as follows:

Actions

Commentary

The creation and maintenance of a robust marketing strategy

Already created and adopted by Herts IQ The Herts IQ brand was launched to market in March 2019 with a comprehensive marketing strategy to target and attract new (employers to the area. There is a team of three experienced sales and marketing professionals leading the Herts IQ project, and a pipeline of confirmed and potential new employers established

Strong governance measures to be established

In place. There is a structured delivery plan for the Herts IQ project, progress against which is reported to the Herts IQ Partnership Board each quarter. This includes reporting of the future occupier pipeline growth, and progress in the defined job delivery targets for the project

The need to secure a high quality upgrade to M1 Junction 8

The upgrade of M1 Junction 8 is a critical improvement needed to support both the delivery of the Herts IQ sites in and adjoining the Maylands Business Park (as well as the wider transformation of Hemel Hempstead through the Hemel Garden Community programme) (set to deliver 11,000 homes/10,000 new jobs).

The upgrade is expected to be delivered on land either within the ownership of the Crown Estate (TCE) or highway land. TCE and HIQ (supported by Hertfordshire LEP) are currently funding a design project in sufficient detail to enable the construction of the upgrade and related highway improvements to roll out East Hemel Hempstead and the development/regeneration of Maylands Business Park, both within Herts IQ and over a wider area

M1 Junction 8 improvements

A package of funding mechanisms are being explored including government programmes, developer contributions and 'in kind' funding

The need to pursue the longer term potential for the Herts IQ site to host the western terminus of the proposed Herts MRT by creating the Maylands Multi Modal Transport Interchange (MMTI)

Herts IQ at Maylands is proposed as the western terminus of the proposed A414 Corridor Strategy and the longer term proposal for a Mass Rapid Transport (MRT) scheme within it. The overall Corridor Strategy identifies a package of 30 separate proposals designed to improve E – W links across Hertfordshire (currently inferior to those running N – S) and encourage substantial modal shift changes to enable and complement the development of a proposed Mass Rapid Transport system.

The LEP would welcome the opportunity to create such infrastructure during the Plan period to increase this locations' attractiveness to investor and boost quality outcomes.

The additional Creation of an MMTI within the East Hemel Central site supports the recommendations of the 2017 Maylands Growth Corridor study in encouraging a significant modal shift. It will also provide a sustainable transport hub within the Herts IQ Enterprise Zone, acting as an interchange between various modes of transport, and supporting sustainable travel across the area as well as for 'last mile' journeys. Improving all transport modes including sustainable transport is a key success factor for Herts IQ as it will make its range of development sites more attractive to target occupiers.

Shorter term objectives pending the establishment of the MRT would include safeguarding the route and, potentially, the introduction of a short term dedicated bus service along its length until a higher specification system can be introduced

The opportunities to promote smaller scale transport initiatives to support development at Herts IQ

Maintenance and expansion of the SmartGo Maylands initiative beyond the current 3 year programme running to the end of 2022; the extension of the Nickey Line cycle route through development area; local us service improvements from development to site wider area as part of Hemel Hempstead town-wide bus service reconfiguration and including bus priority measures

Appendix 4: Maylands Business Development Sites Opportunities

F.1 We have identified 4 major employment opportunities at Maylands Business Park within Dacorum. All have the potential to add significant value to the objectives of Herts IQ and provide high quality jobs in key sectors, and all are identified sites within Herts IQ. The sites are as follows:

Development Site known as:

Size (ha)

Potential jobs

Opportunity identified

Spencers Park II

1.9ha

319

Requires amendment to current consent to establish 5,000 sq.m. office/lab/research /light industrial uses with a potential Net Zero Carbon build/eco design opportunity

Maylands 1

192

Potential for 1,200 sq.m. commercial space on lower floors of a residential development

Maylands 2

400

60 x lab / office units circa 72sqm each (meeting lab spec); Office / research / lab uses; flexible floorplates to respond to demand and 'new' working practices; collaboration environment;

conference and amenity facilities; NZC build opportunity

Maylands Gateway

6.48

Up to 1000

Aspiration is for a single environmental services companies on iconic corner location over time, mix of office/lab /storage spaces; 2 offsite manufacturers; 2 further units being targeted for environmental technology activities

Appendix 5: Promotion of Renewable Technologies in Herts IQ including development opportunities in Maylands Business Park

G.1 We would welcome the ESG making reference to the potential to champion the use of renewable energy technologies at Herts IQ in order to achieve significant levels of carbon reduction across the range of available development sites. The investigations into the potential of achieving this are ongoing stage but we would welcome the opportunity to discuss appropriate policy wordings with you before the draft Local Plan is published.

G.2 At present most decarbonisation opportunities are unrealised as stakeholders remain unaware of the potential benefits. The reality is that decarbonisation allows businesses to reduce both their energy costs and carbon emissions, governments and local authorities to meet targets for decarbonisation and air quality, grid reinforcement to be deferred, and energy capture and storage units to help drive the government's wish to promote energy decentralisation.

G.3 The studies we are undertaking at Herts IQ are expected to offer the opportunity for low or possibly zero carbon development, contribute to the UK meeting its carbon reduction obligations, provide a powerful marketing tool and have the potential to serve as an exemplar to other developments, including regeneration projects within the borough. For this reason we would wish to pursue all opportunities to make a positive statement within the Local Plan.

G.4 Depending on the timing of the completion of our investigations and the timeframe for the Local Plan there is the possibility for the outcome of our investigations to influence future Local Plan policies for Maylands Business Park and, possibility, climate change obligation policies.

Appendix No.6: Sector demand studies at Herts IQ

H.1 Herts IQ is currently engaged in studies into likely investor demand for development sites in Herts IQ and the influence that could be brought to bear on this, with the aim of both maximising outcomes for jobs and sector clustering whilst ensuring maximum returns to landowners and developers.

H.2 This work will undertake a detail appraisal of both the available sites and the commercial market, one that will take account of all the impact that various elements – the pandemic and Brexit, but also a range of other factors – for both now and in the future.

H.3 Working with a detailed evidence base, market research and stakeholder interviews this study is looking at the local, national and sector context, demand factors and an assessment of likely future trends.

H.4 Currently this research remains commercially sensitive and therefore confidential and it is uncertain how much if any of the conclusions can be released into the public domain, if any. If however this is possible we would welcome to consider the ways in which this might inform Local Plan policy.

1 Additional Context – Expanded policy research

- We ask that the emerging Local Plan be appropriately informed by additional policy research which underpins a number of critical employment related These are summarised in Appendix 1 but relate to the following:
- Herts LEP - The Herts Economic Recovery Plan (August 2020)
- KPMG – The Future of Towns and Cities in the UK Post Covid-19 (January 2021)
- Herts LEP - Hertfordshire Key Sites Report (March 2020)

1 Additional Context – Dacorum’s employment activities in a wider context

2.1. We think it important to provide a wider context to Dacorum by covering some Hertfordshire wide indicators of key sector strengths which add significant value to the Hertfordshire economy. These are set out in Appendix 2.

- 1 Herts IQ including Maylands – Herts IQ aspirations and initiatives to promote high quality investment in key sectors
- Appendix 3 sets out the aspirations of Herts IQ to create quality outputs and the measures that are being put in place to underpin these.

1 Herts IQ aspirations for specific Maylands Business Park Development Sites

- In Appendix 4 we list the development sites critical to meeting Herts IQ

1 Decarbonisation initiatives through use of renewable energy – a possible exemplar based at Maylands Business Park

- Herts IQ is currently progressing initiatives in relation to this; such details as can currently be provided are set out in Appendix 5.

1 Sector demand studies at Herts IQ

- Herts IQ is currently engaged in studies into likely investor demand for development sites in Herts IQ and the influence that could be brought to bear on this; such details as can currently be provided are set out in Appendix

B. KPMG – The Future of Towns and Cities in the UK Post Covid-19 (January 2021)

- A number of commentators are starting to visualise what the UK and indeed the wider world will look like when (or possibly if) the Covid-19 is eradicated or brought under Any studies at this time must be heavily caveated, as simply nobody can know when that can be and also cannot be certain what any recovery will ‘recover to’ – it is probably safe to assume there are numerous parallel scenarios that can be conjured up.

B.2 Additionally, we should perhaps recognise that Covid-19 is potentially being used as a ‘piggy back’ of changes in policy, funding support etc that landowners, businesses and developers were already pushing for to serve their own and their clients’ interest.

- The KMPG study starts with a broad assessment of the changes in business practices the pandemic has wrought, with a broad assessment of implications. It is not backed up by detailed evidence but provides a useful perspective from a major company that is experiencing first-hand the implications of the virus in real time along with other The study concludes the following:

- foregoing most business travel allows companies to save costs and gave workers more time to focus on their core tasks, potentially making them more productive
- The proliferation of virtual meetings also enabled broader access to specialist advice and analysis is now almost always available anywhere in the world at short notice (and at much less expense as travel costs and travelling time are avoided)
- Suspending the daily commute enables workers to save time and money, allowing many to work more flexible
- However an obvious downside of this is a blurring between work and home life
- The deep recession triggered by the pandemic has squeezed profit margins across a swathe of businesses, with companies responding in part by reducing property commitments, sometimes significantly
- Some businesses, (including, KPMG notes, its own) have gone down the route of transforming their offices into collaboration hubs, where many workers will come to meet rather than sit at a desk and perform tasks
- Surveys show that most workers would prefer to return to a hybrid mode of work combining days with clients and colleagues in the office and days at home
 - KPMG then considers the implications of this in relation to towns and The report notes a corresponding collapse in retail activity in these locations but does not go into the post Covid-19 implications of this directly; instead, it focuses on what it thinks are the likely decline in town centre jobs, as it considers that many of the changes identified in B.3 above are irreversible (or only partially reversible).

B.5 Based on its analysis (which is not set out in the report) of 109 towns and cities, Hemel Hempstead is joint equal (with another new town, Bracknell) in standing to lose the most town centres jobs – 27.4% in all. Other South West Herts towns also suffer disproportionately, with Watford 4th and St Albans 19th in terms of highest losses.

- When other impacts are factored in – the loss of retail jobs due to online shopping increases sustained post pandemic and what KPMG calls ‘the strength of cultural offering’ (the presence of existing facilities such as sports facilities; culture and recreation assets (ranging from amusement parks to museums and performing arts venues); and hospitality venues (including restaurants, cafe, pubs and bars), Hemel Hempstead stands to be the second worst affected of all 108 towns and cities

B.7 The KPMG take on this is that whilst food retail rents will remain high, non-food retail rents will fall substantially, opening up prime town centre space for conversion to higher education, community and residential uses.

B8. In terms of impact of online shopping, the report suggests the following:

- Online sales have grown by 50%+ in nine months to January 2021, accelerating a trend that would have taken five years plus to deliver in normal circumstances.
- It is expected that 40-50% of all non-essential retailing will be transacted online going forward, up from around 30% pre-COVID. This is just a continuation of a trend that has seen over the last 10 years

QUESTION: Evidence Base comment	<p>The Trust confirms the statement included in the draft Infrastructure Delivery Plan (2020) which states: “Hemel Hempstead Hospital will provide an urgent care facility, diagnostic services and be developed as a specialist centre for planned medical services. The current site will be reconfigured to concentrate services into a smaller footprint, allowing part of the site to be released for development.</p> <p>In September 2019 the Trust was informed that it had been included in the list of hospitals to receive funding under Phase 1 of the Department of Health & Social Care (DHSC) Health Infrastructure Plan (HIP). Works funded under the scheme were scheduled for significant delivery in the period 2020 – 2025.</p> <p>WHHT will now work with DHSC and its NHS regulators to determine the detailed plan and programme for the development of its sites.”</p>

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrarily done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment	<p><u>Comments on Draft Dacorum Infrastructure Delivery Plan, November 2020</u></p> <p><u>Section 13, Green Infrastructure</u></p> <p>13.10 – 13.15 We should be very grateful if you could tell us how the calculations pan-out in terms of extra pitches for each sport and Club by using your calculator, so that we can check-them and make-sure these are included in the Masterplan? We point-out that some mini-rugby pitches will be lost and some Tornadoes pitches have already been lost because of extra car-parking spaces required.</p> <p><u>Summary</u></p> <p>TSF member clubs, having total memberships of 2500 senior and 2000 junior members currently operate to or above capacity. ANY extra housing in Tring will completely over burden existing facilities. The Draft Local Plan should not only make reference to “a sports hub” but should specify the amount of additional sports facilities/space to be provided (using the methodology identified in the Plan.) This calculation should also recognise the current shortfall in provision, especially at junior level at cricket, football and rugby.</p> <p>Logic suggests, additional multi- sports space should be sited adjacent to the two existing sports hubs – Tring Cricket/ Tennis/Hockey/Lacrosse Clubs and Pendley Sports Centre (Football/Squash/Bowls/Rugby.) Should this result in the Dunsley Farm location becoming “over developed”, a further hub should be centred on the East of Tring proposals.</p>

QUESTION: Evidence Base comment	<p><u>Do you agree that the evidence base that accompanies the plan is adequate, up to date and relevant?</u></p> <p>—Due to Covid-19, we are living through a period of rapid evolution with the full impact yet to be assessed. It is almost impossible for the full impact to be assessed as yet, but there are indications that there will be less demand for retail and office space in town centres, freeing up much brownfield land for development. Many families may choose to move further from the South East as they can now work remotely.</p> <p>— There has been a change to the way the housing target figure was produced mid-consultation. This includes plans to categorise land as ‘protect’, ‘growth’ and ‘renewal’ areas. The plan to release significant Green Belt land into the hands of developers would risk these highly valued areas becoming growth areas. This is a serious risk to the Green Belt — it would result in a significant loss of planning control to local authorities and local residents and permanently negatively impact our landscape.</p> <p>— The Glover report has been ignored — this has recommended that the Chilterns AONB becomes a national park — we do not want housing estates encroaching on the AONB.</p> <p>— There is no agriculture strategy</p>

QUESTION: Evidence Base comment	I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's

assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment

The plan uses housing calculations based on out of date guidance, 2014 instead of 2018.
There is clear evidence of areas that the government states are to be protected, but the plan makes no use of this.
The plan is published before the SAC survey evidence is available.
There is evidence from the ONS housing need figures that we need far fewer houses than proposed but this is not used to counter the calculated numbers.
The Covid pandemic has caused changes in working practices which will become permanent. In a far reaching plan, this should be researched and included before the plan is finalised.

QUESTION: Evidence Base comment	I DO NOT agree that the evidence base supporting the plan is adequate or up to date.

Just a general comment in that bearing in mind, the Government's method of calculating housing need has been discredited, the number of dwellings required within Dacorum should reduce, hence some sections within this document need re-writing for accuracy.

QUESTION: Evidence Base comment	<p>Strategic transport modelling</p> <p>There are two modelling reports that form the current transport evidence base for the ESG; the ‘2036 COMET Dacorum Local Plan Scenario’ (April 2018) and the ‘Dacorum Local Plan Strategic Transport Modelling Report’ (May 2020).</p> <p>2036 COMET Dacorum Local Plan Scenario (April 2018)</p> <p>The ‘2036 COMET Dacorum Local Plan Scenario’ (April 2018) reports on the previous COMET modelling undertaken for the emerging Dacorum Local Plan. The modelling work reported within the 2018 report includes Dacorum forecast growth up to 2036 (as forecast in 2017); however, all housing, employment and infrastructure inputs for all other HCC districts remain at 2031 levels. Therefore, Highways England have not interrogated the 2018 modelling document in any further detail as part of this response, instead focusing on the more up-to-date modelling that has been undertaken (reported within the May 2020 modelling report).</p> <p>Dacorum Local Plan Strategic Transport Modelling Report (May 2020)</p> <p>The purpose of the May 2020 modelling report is to present the steps taken to produce the 2036 forecast scenarios, present a summary of results across Dacorum’s highway and public transport networks, and to provide the evidence base on strategic transport modelling which DBC can use to inform their final recommendation on the development strategy of the new Local Plan.</p> <p>The modelling assesses the impact of the additional Local Plan allocations within Dacorum up to 2036 in conjunction with anticipated transport infrastructure in the current version of the COMET transport model.</p> <p>Section 1.2.3 of the May 2020 modelling report sets out the preferred option in terms of Local Plan growth across Dacorum was when the ‘Dacorum Scenarios’ modelling was undertaken. It states that the preferred scenario was based on the Objectively Assessed Need (OAN) of around 1,025 dwellings a year (18,450 total new dwellings between 2018-2036). This is higher than that which is set out within the Emerging Strategy for Growth (ESG) and although it is acknowledged that given this, the COMET modelling results are likely to offer a robust forecast it is recommended that the strategic modelling should be updated to reflect the housing and employment growth figures within the final preferred scenario once known (currently 922 per year within the ESG). The updated modelling should also reflect the most up to date growth forecasts for all Hertfordshire districts and neighbouring authorities.</p> <p>As part of the May 2020 modelling, four scenarios were tested;</p> <ul style="list-style-type: none"> • Dacorum Baseline 2036); • Additional Allocation (2036); • Scenario 1 (2036); and

- Scenario 2 (2036).

The model report does not provide a 2036 model with background growth only, just scenarios with Local Plan development included. Therefore, Highways England are unable to undertake a comparison to determine the impact of Local Plan development over and above the background growth scenario.

The modelling undertaken demonstrates;

- Increased delays at M25 Junction 20 of over 5 minutes
- Notable increases in flows along the east Hemel spine road to access the M1 Junction 8
- Notable increases in flows along M1 southbound in the inter peak
- Notable increases in flows along M1 southbound from Junction 10 to the M25 in the PM peak
- Notable increases in flows along M1 northbound to access Hemel Hempstead from the east via Junction 8 during the PM peak
- Re-routing of traffic towards M1 J8 as a result of the new northern link road

Highways England therefore suggest that further consideration is needed by the Council as to how the impacts of the Local Plan's growth will be mitigation with regards to its impact on the SRN.

QUESTION: Evidence Base comment	Draft Dacorum Infrastructure Delivery Plan (November 2020) The purpose of the Infrastructure Delivery Plan (IDP) document is to set out the infrastructure required to create quality sustainable places and support the delivery of the local plan growth (housing, employment etc.) in Dacorum Borough.

The IDP categorises infrastructure need and Chapter 9 'Highways and Transportation' is of relevance to Highways England. This chapter repeats the transport modelling that have been discussed earlier with similar conclusions that a mitigation will be required for M25 J20 and at M1 J8. Highways England consider that more detailed modelling at each of these locations will be necessary to clarify the extent and timescale of future mitigation schemes at these locations.

QUESTION: Evidence Base comment

Dacorum Local Plan Transport Evidence Base Transport Topic Paper (November 2020)

The Dacorum Local Plan Transport Topic Paper (TTP) forms part of the Transport Evidence Base for the Local Plan and provides a summary of the transport evidence base prepared to date for the ESG, including the package of transport interventions developed to support it.

Section 4 of the document concludes with a summary of the key mobility issues, with those of relevance to Highways England being congestion around Hemel Hempstead along the A414, A41 and M1 and Kings Langley on the approach to the J20 of the M25 on the A41.

Although the TTP has been produced to support the Local Plan, it has used a different COMET model run to that supporting the Local Plan evidence base. Highways England would therefore suggest that the future Local Plan modelling scenarios use LP5 COMET model.

The modelling results broadly reflect the high-level findings determined from the modelling reported within the May 2020 modelling report. Therefore, as mentioned earlier due to the close proximity of the North and East Hemel Growth Areas to M1 Junction 8, and the likelihood of increased delays at M25 Junction 20 as a result of Local Plan growth, Highways England recommends that detailed capacity assessments are undertaken at M1 J8 and M25 J20 to fully understand the impacts of the proposed local plan growth at these locations.

Section 7 of the TPP provides a review of some of the existing emerging transport schemes (drawn from a review of several strategies including the Herts LTP4, Greater Hemel Strategy, South West Herts Growth and Transport Plan, Hemel Gardens Communities Transport Plan) to determine how far they go to deliver the set LP goals and objectives. Those schemes considered to potentially be of relevance to Highways England include:

- East Hemel Link Road;
- M1 Junction 8 Update;
- A414 Junction 8 Cycle Bridge;
- A414 Highway Improvements;
- Maylands Access Upgrades (Package 2);
- Hemel Hempstead – Luton Corridor (Package 3);
- Watford – Hemel Hempstead Corridor (Package 6).

The TPP states that additional capacity at M1 Junction 8 is needed but that this should be targeted to provide reliability and journey time advantage for public transport and essential operational capacity to Maylands. It is important that any new infrastructure provides prioritisation to public transport and active modes to achieve the ambitious mode share aspirations. It should therefore be noted that any proposed junction and highway layout amendments at M1 Junction 8, such as bus priority measures, should be designed in a manner will not have a detrimental impact on the operation and safety of the junction and SRN.

Highways England should also be consulted on any non-highway related schemes as set out in Sections 7 and 8 of the TPP (i.e. cycle bridge proposals at M1 J8, bus priority measures or lorry parking/ routing proposals etc.) that cross or run within the vicinity of the SRN, so that it can be ensured that evidence is provided that the Highways England network will not be adversely impacted.

In the meantime, if you have any queries with regards to the comments made above please do not hesitate to contact me

<p>QUESTION: Evidence Base comment</p>	<p>The Emerging Strategy for Growth appears to be based on selective strategy documents* that have no formal planning status and which have not been widely consulted on. As a result, the Strategy has failed to take account of a number of important issues - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan, should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.</p> <p>*Dacorum Growth & Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan</p> <p>The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents. This will ensure much greater emphasis should be given to regeneration of previously developed land in order to reduce the amount of housing and employment development on Green Belt and other greenfield sites outside of existing towns and villages.</p> <p>Local Plans are best developed using an integrated approach that puts climate change, biodiversity, well-being and social inclusion at the centre of the plan. Dacorum Borough Council declared a climate emergency more than a year ago. Despite this and some well-intentioned promises, the Strategy as published clearly prioritises economic growth and greenfield land development over considerations for the climate emergency. In so doing, it has failed to take account of legislation and recommendations from various UK bodies on how carbon reduction plans have to be integral to the development of local plans. Words of 'encouragement' are insufficient and no substitute for detailed carbon budgets and committed targets of local carbon reductions. This is a requirement of the National Planning Policy Framework (NPPF) and the 2004 Planning & Compulsory Purchase Act. A carbon reduction plan or pathway is required to meet the current national climate obligations of net zero by 2050 and this work should underpin a revised land use and development strategy.</p>

QUESTION: Evidence Base comment	The numbers are questionable. The government initially based the numbers on a formula now known as 'The mutant algorithm'. In December the government announced it would ditch this algorithm — many reasonably thought that the proposed numbers in the local plan would therefore fall. Despite this, the government changed the statistics to justify the numbers anyway, and the number of proposed houses therefore increased. This is ridiculous.

QUESTION: Evidence Base commentReview of Council's Previous Assessment Work

The Policies Map for the Dacorum Borough Local Plan 1991-2011 did not previously identify the site as an Open Land designation.

Following adoption of the Core Strategy by the Council in 2013, the site was identified as an Open Land designation in the Site Allocations DPD which was adopted in 2017.

As part of the Council's initial preparation of the Site Allocations DPD, a total of 25 sites were considered for a new Open Land designation within the Borough as part of the Site Allocations Background Issues Paper (June 2015) (SABIP). Edgeworth House represented the only site of 5 considered in Berkhamsted that was progressed towards an Open Land designation.

It was clear from the level of dismissed sites that the criteria required to justify an Open Land designation was high. As noted in the SABIP, the criteria included a size threshold of 1ha; the consideration of proposed uses of the site; and built form.

Edgeworth House is referenced in a number of documents forming the evidence base for the Core Strategy and associated Site Allocations DPD documents. There is a marked inconsistency in how the Local Authority has considered the site and various conclusions drawn relating to Edgeworth House. These are documented below:

- 2006 – Strategic Housing Land Availability Assessment (SHLAA) documents notes the site as appropriate for circa 11 dwellings under site BW/9.
- 2008 – Open Space Study notes that the opportunity could be taken to include part of the Edgeworth House site closest to the canal as open land
- 2013 – the adopted Core Strategy defines Open Land as areas greater than 1ha. The Edgeworth House Garden closest to the canal measures only 5700sqm. The other land in the gardens of Edgeworth House was added to achieve the 1ha threshold
- 2014 – The Site Allocations Background Issues Paper considers the site and makes the following comments, *“The green space here forms the back garden of the dwelling and **not appropriate to allocate as Open Land**. Site also affected by watercourse and floodplains, meaning scope for development may be restricted. 1.6 ha.”* This conclusion would note that the site should not be allocated as Open Land
- 2015 – The Site Allocations Background Issues Paper, notes the following comments in relation to the site, *“The green space here forms the back garden of the dwelling and extends 1.6Ha. Site affected by watercourse and floodplains, but land contributes to urban form, would extend the existing green/ corridor/ Open land associated with the canal and enhances the character of the listed building.”* The previous comments from the 2014 study are simply dismissed with very limited explanation other than, an error was made. My client also considers the Council was in breach of its obligations throughout the earlier phases of the above procedure of putting the site forward as Open Land since at no point did they advise the owners of Edgeworth House of their intentions or proposals. Furthermore, contrary to what the Council has said there appeared little or no real support for designating Edgeworth

House as Open Land in 2017 outside the Council. The garden at Edgeworth House appears to be the only private garden land in Berkhamsted classified this way.

The previous work undertaken by the Council identifies clear inconsistency in the comments noted across the assessments and highlights the lack of justification for the continued designation of Open Land and lack of real technical input into the assessment.

The assessments provide a reasonable identification of the positive elements of the site; the open nature at the northern edge close to a water environment of high habitat value; the absence of built form and the presence of trees that contribute to the urban environment. However, the assertion in the assessments is that the Open Land allocation will form an extension the wider designation; provide a buffer between residential and employment uses; and enhance the setting of the Listed Building are all false. The designation of Open Land makes no change to these matters. The habitat of the canal green corridor will not be extended and is already there in situ.

The protection of habitat; setting of the Listed building and protection of any TPO (Tree Protection Orders) trees can be maintained through normal planning control. Furthermore, the exclusion of garden land from the definition of previously developed land in the NPPF reinforces this position; protection from unsuitable development, and focus to maintain important landscape features is ensured.

In summary to the previous assessment work undertaken by the Council, there have not been any substantial reasons given to how the Open Land designation of the site at Edgeworth House shall contribute to the provision of genuine Open Land within Berkhamsted.

**QUESTION: Evidence
Base comment**

A Housing numbers

We note the discussion provided in Topic Paper 'Development Strategy November 2020': this tracks the history, marshals the data and argues that the dwelling numbers for the Reg18 Plan meets the housing needs for the Borough viz 922 [or recently 1023] pa. We dispute this is the correct basis for the Plan – which is based on 'national requirements' rather than local needs.

The paper includes a comment 6.7:

Below we set out data drawn from reliable sources e.g. ONS and the study commissioned by the Districts' Joint Housing Needs Assessment quoted in the Plan.

The current dwelling numbers established in the Adopted 2013 Core Strategy sets an annual build rate of 430 pa.

- The Data shown in Fig 2 Housing Trajectory 2020 – 2038 [p 38] records anticipated completions across the Borough for 2020/21 as **654** and 21/22 as **1036** . These are well in excess of the Core Strategy and also the numbers projected by

The numbers set for the Draft Plan have been based on the ONS projections of housing 'need' but manipulated by a formula adopted by MHCLG to determine the 'national requirements' stated in Para 6.7 above.

Dacorum

ONS projection of Dacorum annual housing growth

After adjustment by MHCLG

algorithm

After adjustment by MHCLG

algorithm

ONS 2014

730

1023 [new standard applied]

ONS 2018

355

922 [mutant applied]

497 [new standard applied]

As a result, we object to the adoption by the Borough of the Ministry's numbers: a lesser number to meet the assessed local needs must be agreed upon. This must lead to a revision of the site allocations and a new Plan.

We note the data in Table 6 Affordable Housing Need across South West Hertfordshire [page 62] indicates an assessed need of 611 dwellings pa.

DACORUM

Rented affordable

housing

363

Affordable Home

Ownership

248

TOTAL

611

We also note that the Borough assumes a continuing policy of requiring 40% of new dwellings should be allocated as 'affordable' on Growth Areas [viz Green Belt], with 35% in the urban area of Hemel Hempstead and 40% elsewhere [DM 1 para a.]

For an area with acute need for homes at 'social rents' [see Para 14.29 et seq p 62] should the proportion not be increased to 50 or 60%?

This would change the market dynamics and deliver a better share to the community of the uplift to land value following the release of (mainly) Green Belt land and consent to development.

QUESTION: Evidence Base comment	<p>We note the statements in the NPPF Para 11: <i>Plans and decisions should apply a presumption in favour of sustainable development.</i> <i>For plan-making this means that:</i></p> <ol style="list-style-type: none"> 1 <i>plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change;</i> 2 <i>strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless:</i> <ol style="list-style-type: none"> 1 <i>the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or</i> 2 <i>any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a "</i> <p>We have previously said we remain unpersuaded on the assumptions made that lead to the number of dwellings proposed to be built over the Plan period. There is an assumption in the Draft Plan that there is demonstrable benefit that outweighs the disbenefits of the proposed release of land from the Green Belt. We dispute that this is the case certainly around Berkhamsted and Northchurch where sub para i and ii should take precedence and be applied.</p> <p>Comments such as sustaining vibrancy etc are not accompanied by evidence to support the argument.</p> <ul style="list-style-type: none"> • Maintaining supply and delivery • Para 73 includes the comment: <i>Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years' worth of housing against their housing requirement</i>

set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old.

This invites the question on what is the appropriate number for the local housing need: in this Borough the need is for dwellings at 'affordable cost' or 'social rent'. The footnote 37 [Page 20] states:

Where local housing need is used as the basis for assessing whether a five-year supply of specific deliverable sites exists, it should be calculated using the standard method set out in national planning guidance.

This introduces a contradiction and conflates open market housing supply with housing need. This leads to a further increase of dwelling numbers, in excess of what the ONS data is projecting, and locally, to significant demand for Green Belt land release beyond the urban capacity.

The strategic policy adopted in 2013 sets an annual requirement of 430 dpa; the 'local housing need' may be greater than this number, but even so that is larger than the number projected from the 2018 ONS data.

The Draft Plan sets out to meet the stated number of dwellings as required or calculated by the 'standard method' determined by the Ministry, with a modest buffer. Para 19.6 and 19.7 of the Draft Plan make reference to Para 136 of the NPPF viz:

Until the adoption of the Draft Plan, the final sentence should read:

It is proposed to release Green Belt land to enable the delivery of the spatial strategy for Dacorum.

First Dacorum has to 'prove beyond doubt' that "exceptional circumstances" exist to allow the release of Green Belt, which Berkhamsted Citizens remain vehemently opposed to.

F Para 137 says:

Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development.

This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:

- 1 makes as much use as possible of suitable brownfield sites and underutilised land;***
- 2 optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and***
- 3 has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common***

other locations well served by public transport'.

We look forward per sub para c) to learning whether discussions with neighbouring authorities prove fruitful.

Public Transport – in General

What an operator would like, and many passengers.

A service that goes directly from your origin to destination, with minimum stops, very fast, maximum loading.

The challenge is getting all passengers in one place in the first place. So most public transport ends up with a lot more stops and uneven loads.

Most railways were laid out before the houses, so tend to fit this description. It is not easy to move railways. There is a problem though, when planner and developers build houses a long way from stations which makes the train less attractive. There is still the stopping pattern problem i.e. too many stops makes the journey slow and unattractive.

Buses have a different problem. When we layout housing estates, we do not think about the bus services. So, they often have to follow the road network, which can make the route structure inefficient. To make a route viable, it must cover many houses, but this often means the route must go “round the houses” a long and winding route, with many stops and lots of detours. The resultant journey is so slow, many people shun the bus and use the car.

So, we need to design new housing estates with a road layout which encourages bus, tram and train use.

When creating new housing, the residents need new services, such as Schools, Health care (doctors and hospitals) and shops, not just transport. There are some key differences though. The other services can be retrofitted to a housing estate. Good public transport must be designed in from the start. For all other services, you need transport to get to them. So, must be designed with transport in mind.

When choosing where to live we have to consider a number of factors, many of them are determined by transport.

- A large proportion of households have two adults working. If they are working, they need to get to work.
- If the house is for a family with children, in most cases they will need to get to school. Often they will be at the same school, but not always.
- The size and cost of house can affect the type of transport Can a house be afforded on 3 times average local wages? Possibly with 2 adults working this could be higher. If they cost more than this, then at least one adult will be traveling a longer distance to a higher paying job. This could be by train to London or by car somewhere else. If they use the train, they will need to get to the station from their house.

If the house is within a mile of the station on the flat, then walking is easy and can be assumed. If it is further away or up a hill walking will be less attractive. Over a mile or with a steep hill then walking will not be common. Some people will cycle, providing there is secure storage at the station.

There is a challenge with a bus, as you need the bus to connect with the train. Sufficient time must be allowed, to get from one, to the other. Time must be allowed in case one is late. But if it is too long it adds to the overall journey time. This makes public transport less attractive.

When public transport is attractive many people will choose it over the car. But when public transport is too slow, unreliable or undependable people will revert to their cars. In most cases where people have the resources to buy a house, they will also have the choice of using a car. The car will be the default option if the alternatives are not designed to be attractive.

For each household, one adult will create 1 return trip from home to work. For each school visited it could result in 2 return trips a day if in a car.

The question is which mode of transport will be used. This must be planned in when the house is built. Is it practical (safe, secure and easy) for a child to walk or cycle to school? If not then they will normally end up in a car.

Other journeys will also be undertaken by households; however, this paper focuses on the journeys that happen daily and will therefore cause the highest volume of traffic.

Therefore, it should be mandatory for all housing development to have a transport plan to address where the people who live in the houses will; work, go to school etc. Then determine how they will get there, then how the existing and planned new infrastructure will handle it. If this plan is inadequate the proposal should be rejected. It should also address wider issues such as climate change i.e. the carbon produced by the transport, should be included in the carbon budget for the development as a whole.

This paper focuses mainly on the transport need of housing for sale, not rent. However, many of the issues apply to social housing as well as private housing. However, the choices facing people who cannot afford a car, can be different. They are forced to use public transport. But their need for good public transport are often greater.

Everyone's quality of life is determined by the income they can obtain, less the cost of housing and the cost of travel between housing and work.

If you are on a low income, dependent on social housing, but your social housing is too far from your work, you will probably end up on benefits. Or you will spend so much of your time and money travelling to and from work, so as to destroy your quality of life.

Berkhamsted is a beautiful town, ideal commuting distance from London. But it has the challenge of its location.

It is set in a relatively steep valley which rises over 60m from the bottom of the valley to the top. The main road up the valley, forms the high street through the town. The Railway station is near the centre of the town. There are not many alternative roads to the high street, to get from one end of the town to the other. There are few radial roads. So for most journeys from the periphery of the town, to any other part of town it is necessary to go through the centre. The result is the main junction in the town is regularly grid locked in rush hour.

The centre of the town was built in the 19th century. With narrow streets and no off-street parking. In the 20th Century the town continued to expand until the periphery is no longer in walking distance of the centre.

There are no natural routes for new roads to relieve this. The existing roads are not capable of handling the existing traffic.

There are proposals to build 2,200 new houses on the edge of town. Most of these will be large family houses which will not be affordable on local wages.

No explanation has been provided as to how the town's road and transport system will be able to cope with the resultant journeys that will be generated which will result in a further 13,200 car journeys a day according to 'Trics' (Trip Rate Information Computer System).

QUESTION: Evidence Base comment The ONS have now reduced their estimate for the housing requirement in the borough and therefore a far lower level should be planned for. If you go ahead with this density of housing living here will be so unpleasant. The area already seem overcrowded with the steady infilling, which has been going on for a number of years, with the enormous increase that you propose it will make life unbearable.

QUESTION: Evidence Base comment	<p>It is not up to date.</p> <p>As well as the recent change in the housing target figure which is produced by the standard method, which in fact changed mid consultation, there are significant impacts to be considered from the proposed white paper changes. Particularly significant are the plans to categorise land as 'protect' and 'growth' and 'renewal' areas. Under the current proposals from the Local Plan, 750 hectares of additional greenbelt are planned to be released, and it would appear that these areas would then automatically become 'growth' areas. This would result in a significant loss of planning influence by the council and local residents, which has a myriad of potential pitfalls for our community.</p> <p>Many of the documents in the evidence base are understandably not up to date with these changes, and whilst this is not required for every piece of evidence, these potential changes are enormously significant and must be given due consideration in relation to the local plan, which to date, is not the case.</p> <p>WHERE are the Topic Papers on Heritage and on Health, Wellbeing and Cohesion? These are two of the "Objectives" and all the others are covered – why not these?</p> <p>Certain important documents such as the Dacorum Infrastructure Plan remain in draft form, and it is difficult for residents to make an informed judgment on the Local Plan as a whole when key documents such as this are not final. With a proposed 25% increase in population, infrastructure is one of the main areas of concern for residents, but with this area barely touched on in the main plan, and the Dacorum Infrastructure Plan still subject to unspecified changes, it is not possible for residents and businesses in Dacorum to form a well advised opinion on these matters.</p>

QUESTION: Evidence Base comment	<p>The Employment Topic Paper (paragraph 3.25) is clear that across South West Hertfordshire ‘<i>land supply for offices exceeds the recommended 2018-2036 floorspace growth by 76,000 sq m</i>’. It is noted that the surplus land supply can largely be attributed to oversupply of office floorspace in Watford and Three Rivers (paragraph 3.26), but the conclusion that this oversupply could address the undersupply elsewhere appears to have been downplayed, with the suggestion at 3.27 that the supply would only meet ‘<i>footloose</i>’ demand.</p> <p>My clients do not agree with this conclusion, particularly as the Employment Topic Paper goes on to confirm (section 4) that Dacorum sits in a Functional Economic Market Area (FEMA) with Watford, Three Rivers and other authorities. It is therefore not unreasonable to assume that the availability of office floorspace should be looked at across the wider area, rather than strictly on an authority basis, which is the proposed approach in the draft Local Plan. As covered below, such an approach is not in line with national policy which expects economic issues to be looked at across functional areas, not authority by authority.</p> <p>The Employment Topic Paper goes on to recognise a number of points which align with our position that the approach to restricting the loss of office floorspace is inappropriate. In particular, the input of the Councils’ own Economic Development and Infrastructure Team (paragraph 4.26) which confirms (amongst other points) that:</p> <ul style="list-style-type: none"> • Demand for large office buildings/space is falling as the nature of business changes • There is a major shortage of smaller units to facilitate business growth • A criteria based policy could be considered to protect better quality units

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment	I have been informed from a number of sources that the Evidence Base is neither up to date or accurate.

The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.

The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.

The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.

Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date 2018 data.

QUESTION: Evidence Base comment	<p>We have been informed from a number of sources that the Evidence Base is neither up to date or accurate.</p> <p>The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.</p> <p>The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.</p>

The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.

Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date 2018 data.

QUESTION: Evidence Base comment

We have been informed from a number of sources that the Evidence Base is neither up to date or accurate.

The ONS (Office for National Statistics) has provided household projections most recently in 2018. But this local plan strategy is based on older out of date ONS projections from 2014.

The changes in the projections between these reports are very important, I believe if the correct and most current 2018 figures were used along with applying the revised Government guidance on calculating housing needs - this would result in a plan for a much lower scale of development.

The Council has based its calculations on the outdated 2014 based ONS data which, results in a significant overestimate of housing and brings into question the soundness of any local plan based on them.

Studies by our local town councillors have indicated that the projected 1000+ houses required per annum under the 2014 ONS data would likely reduce to less than 500 per annum using the most up to date 2018 data.

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment

No. As per our response at Question 2, the Evidence Base is primarily outdated and unreliable based upon its reliance on outdated housing numbers, as well as its incorrect interpretation of the NATS consultation zones, and the inclusion of HMP The Mount’s drainage infrastructure and infiltration basin within Growth Area Bv02.

The Development Strategy Background Topic Paper (November 2020) is incorrect in its reference to a major constraint of the possible redevelopment at Bovingdon Airfield as the requirement to overcome the *“height restriction associated with the air traffic control (NATS) navigation beacon at Bovingdon Airfield”*. As detailed within our response to Question 5, this is an incorrect interpretation of the data and should be reconsidered in the context of our correspondence and consultation with NATS.

Appendix A of the Urban Capacity Study (incl. Windfall Assessment) (November 2020) is outdated, incorrectly highlighting a larger development area than proposed (**Appendix C**), including the drainage soakaways and infiltration basin associated with HMP The Mount. In addition, it seeks to lower the expected housing delivery to 40 dwellings without technical evidence and contrary to the opinion of the landowner.

Table 75: Bovingdon summary of key infrastructure requirements, of the Draft Dacorum Infrastructure Delivery Plan (November 2020) and the ‘Draft Infrastructure Delivery Plan – November 2020 – Settlement Schedule for Bovingdon, note *“Ensure the drainage infrastructure associated with HMP The Mount and the adjacent holding reservoir for Bovingdon are maintained and where necessary, enhanced (Bv02)”*. It also makes references to the provision of a site of 40 dwellings.

The AECOM site assessments were also each considered against a lower housing need for the Borough, allowing for the discounting of sites which could support the sustainable development of the Council. Further, the Urban Capacity Study (November 2020) estimated capacity within the existing settlements at 10,440 homes, below the level of housing required. The Site Selection Topic Paper (November 2020), interrogates the level of urban capacity available, including existing allocations, commitments, and windfall allowances. Concluding that 10,954 dwellings can be expected to be delivered within the urban areas (note this is slightly different from the number set out within the Urban Capacity Study). This is 7,460 dwellings short of the housing requirement of 18,414 dwellings (based on 1,023dpa).

The issues outlined above with the supporting Evidence Base, in addition to our response to question 2-7, show that in addition to the interpretation of NATS consultation zones, the change in housing requirement has resulted in the need for extensive updates to the Evidence Base and Draft Plan.

QUESTION: Evidence Base comment	The evidence base is inadequate because a full consideration of all possible sites has not been carried out. Relying only on proposals put forward by developers may well be justified when the housing need can be accommodated relatively easily, but not when a substantial increase is required in a local authority area with not only a substantial percentage of Green Belt land but also an AONB. The council's own search showed potential for this approach but it was not given sufficient attention in the plan.

QUESTION: Evidence Base comment	No, A lot of it is irrelevant, much is flawed, and most importantly, it's needlessly large and some poorly structure that it's opacque. This is mostly documented above but the highlights are: 1) Sustainbilty apprcial based on "low carbon" not "zero carbon" 2) I've included a list of evidence above about the flaws in the key premise underpinning the whole Local Plan, i.e. the goverment house building targets.

3) As the objective of the Local Plan are incorrect there for key peice of evidence like the transport study are invalid as they assess the wrong things. For instance. The Transport study only assess whether transport can be made "more sustainble" when it should be assessing whether it can be made "zero carbon combatible" inline with the goverments national zero carbon target and road to zero strategy. The UK climate target is legally binding not asperational bonus! It's list of interventions are there for completely inadquate.

4) Carbon Budgeting doesn't include construction emissions within the year the construction occurs which is an oversite. This means borough will be emitting significantly more GHG's that it's budget allows during years when there is significant construction, but will think it's happily within budget. Such false positives are dangrously misleading, as they could mean the UK or the World is missing it's targets, but all the country/borough think they are doing enough.

5) 'South West Herts Economic Study' - Doesn't take account of Pandemic and Climate Emergancy, both of which may lead to less/shorter commuting, more working from home, and less big offices.

6) Flooding isn't part of climate change mitigation or sustainability, it is a seperate enviromental concern. It therefor is misleading to list flooding assessments under heading of "climate change and Sustainbilty" as it gives the impress the local plan as lots of "climate change and Sustainbilty" evidence when in fact it has very little.

The biggest problem with evidence base is the size of it. For there to be any accountability or transparency yet the council needs to publish everything (including minutes from all meeting that shape these proposed which are currently absent), but the council also needs to to make grant funding available to scrutinist all this infomation. It cannot publish multiple books worth of infomation adn expect the populations over the course of a few mounths to read and anaylsis all of it. People independant of the council need to be paid to scrutinise all the infomation and pull out the key infomation and issue in formats the public can engage with. I suggest that the Political foundation model where council makes grants available to political parties to commission external organisaition to do detailed scrutiny work based on the number of votes each party received in last election.

QUESTION: Evidence Base comment	The current Local Plan relies on outdated data, from a study in 2011 – which showed potential problems with water supply / drainage. The revised Local Plan must make it clear what impact the development proposals will have on this, as well as sewage – especially if after review there is still a greater number of housing suggested.

The level of new housing currently proposed is expected to put severe strains on water supplies to Dacorum during the 2020s under drought conditions. In these circumstances there would be no option but to extract additional water from the chalk aquifer which in turn would cause further damage to the Borough's precious chalk streams. New supplies of water are not likely to be possible until after 2030.

The growth proposed by the Strategy would require substantial infrastructure improvements in order to transport and treat wastewater and sewage. This might take at least ten years to complete, and be extremely expensive as well as disruptive to affected communities.

QUESTION: Evidence Base comment

I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrarily done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	<p>I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment	<p>I commend the level of effort and sense of public service which Dacorum BC employees have contributed and demonstrated in creating this strategic plan, however I regret to have to state that I consider its conclusions to be fatally flawed. Since my principal comment relates only to Question 7 of your consultation comments form, I have simply included my answer to that question below in this email, rather than enclose a fully completed form. My views on all the other questions in the comments form are very articulately covered by the official responses to the strategic plan submitted to you by Berkhamsted Town Council, Berkhamsted Citizens' Association and Berkhamsted Residents Action Group.</p> <p>My concern is the premise under which this Dacorum strategic plan has been developed – viz. that the plan cater for what the authority defines as the level of “need” for more housing. The authority’s evidence for this definition of need comprises data from various sources including HM Government and the SW Herts Strategic Housing Management Assessment of 2016.</p> <p>I agree completely with the detailed comments in answer to this question made in the official responses to the Dacorum strategic plan by Berkhamsted Town Council, Berkhamsted Citizens' Association and Berkhamsted Residents Action Group, and I would add my own comments as follows:</p> <ol style="list-style-type: none"> 1 During the Covid-19 pandemic, there has been clear proof that a significant portion of the previously office based working population are able to work productively from home – and this despite the UK’s ultra-high speed broadband infrastructure’s currently being somewhere between ‘almost non-existent’ and ‘utterly pathetic’. 2 I am certain that many large-scale employers in the UK will be revising their medium and long term needs for increased office space in the area of London and the Home Counties, having taken into account the demonstrated success of 'remote working' during the pandemic. Prior to the pandemic, I myself had direct experience of the benefits, for both employees and company, which result from this approach, having been an executive board member of a US company which implemented such a plan for a significant portion of its own staff nearly twenty years ago. 3 Microsoft have recently announced that they will make ‘remote working’ a permanent option for their staff and other high-tech companies are already following suit. It will not be long before even the most conservative employers (even eventually Goldman Sachs) will find it desirable to review their own medium and long term plans on this matter. There is no question in my mind that a sufficient number of companies will pursue this course of action within a sufficiently short timescale that it would alter the housing needs currently assumed by the Dacorum plan. Moreover, were HM Government to invest sensible sums in the provision of ultra-high speed broadband to homes

throughout the country, then the currently perceived growth in demand for housing in the South East of England could be lowered on a still earlier timescale.

- 4 HM Government should therefore be advised by all local authorities, especially those in South East England, that they must invest far more than the relatively trivial sum of £5bn (see House of Commons briefing paper CBP 8392, dated 2nd December, 2020) in bringing forward the provision on gigabit broadband to home owners across the whole country. As an aside, note for comparison that HS2 (a project which would have had great relevance, if only it had been effected in the 1960's or 1970's) is currently on track to exceed £100bn. A cost/benefit study would I believe show that ultra-high speed broadband has a hugely greater pay-off than HS2 and that the delivery of ultra-high speed broadband can be effected far more rapidly.
- 5 Such a national study of the impact of ultra-high speed broadband on 'remote working' and consequential impact on housing needs to be undertaken urgently. This ideally would be completed before further consideration of the current Dacorum strategic plan, such that the key input factor of housing need can be revised based on a properly thought-through assessment of the impact on such need of the likely future work environment, as opposed to the work environment of yesteryear.

QUESTION: Evidence Base comment Following comment on Q6 - there is very little evidence of "what might be lost" on various proposed sites - particularly with respect to the Natural History - we cannot go on assuming that the nature will just "move somewhere else" when a development proceeds - it will not, it will simply be lost.

QUESTION: Evidence Base comment	<p>Whereas the Local Plan gives special attention to the Ashridge portion of the Beechwood SAC, little specific attention is paid to the other SSSI's which border Tring (and another which is just outside in Buckinghamshire). No consideration is given to the adjoining woodland in Buckinghamshire. The impact of proposed developments on these areas are not reflected in the Local Plan.</p> <p>If it is concluded that Green Belt land should be released for housing, the NPPF makes it clear that improvements must be made to environmental quality and accessibility of remaining Green Belt land. There is no detail/commitment to how this would be achieved within the Local Plan.</p>

QUESTION: Evidence Base comment	<p>Whilst it is clear that an enormous amount of work has been carried out in relation to the local plan, there are multiple recent factors which have not been taken into account.</p> <p>The vast majority of the Local Plan was prepared prior to the offset of COVID, and so doesn't account for major changes in working and shopping practices which are expected, or the requirement for public open space which has become more pronounced.</p>

A large proportion of the evidence base doesn't account for the recent update in Climate Change science, which insists upon an accelerated pathway to net zero.

As well as the recent change in the housing target figure which is produced by the standard method, which in fact changed mid consultation, there are significant impacts to be considered from the proposed white paper changes. Particularly significant are the plans to categorise land as 'protect' and 'growth' and 'renewal' areas. Under the current proposals from the Local Plan, 750 hectares of additional greenbelt are planned to be released, and it would appear that these areas would then automatically become 'growth' areas. This would result in a significant loss of planning influence by the council and local residents, which has a myriad of potential pitfalls for our community.

Many of the documents in the evidence base are understandably not up to date with these changes, and whilst this is not required for every piece of evidence, these potential changes are enormously significant and must be given due consideration in relation to the local plan, which to date, is not the case.

Certain important documents such as the Dacorum Infrastructure Plan remain in draft form, and it is difficult for residents to make an informed judgment on the Local Plan as a whole when key documents such as this are not final. With a proposed increase in population of a quarter, infrastructure is one of the main areas of concern for residents, but with this area barely touched on in the main plan, and as the Dacorum Infrastructure Plan still subject to unspecified changes, it is not possible for residents and businesses in Dacorum to form a well advised opinion on these matters.

There is no mention of the Glover Report, which proposed the AoNB become a National Park.

No strategies for or mention of agriculture even though 85% of borough is rural.

The Habitats assessment is out of date (2006).

No Habitats Regulations Assessment (HRA) documents are published alongside the draft Local Plan for consultation.

QUESTION: Evidence Base comment	<p>The actual need according to ONS is shown at 355 per annum, not 1,023, nor even the previous 922. Development to this level simply is not sustainable in the Borough for many reasons and will be developer-driven, still failing to provide the much-needed housing at an accessible price for local people.</p> <p>This Plan is not about how to improve Hemel Hempstead for Hemel people but merely to hit an artificial inflated housing figure. The Census due on 21 March will produce much more accurate figures. There is room within the NPPF for Councils to set their own targets provided they can justify their numbers.</p>

QUESTION: Evidence Base comment	<p>DBC's (disputed) interpretation of the national requirement without challenge or resistance has overridden the needs of the local community and is at odds with the sustainability goals of the local area. The local plan must be redesigned to prioritise the needs of the local community and its sustainability. Government policy gives DBC flexibility to do this yet DBC seems to have willfully fettered its discretion. This needs explaining to the local community before proceeding to the pre-submission stage.</p> <p>As noted in response to Question 5, there is additional evidence that should be gathered and considered prior to the pre-submission stage, in particular the impact of sites along the ridge area of Berkhamsted which are in the current plan.</p>

QUESTION: Evidence Base comment	<p>No!</p> <p>As an HR Manager, I'm seeing first hand how the impact of Covid-19 is bringing about change in the way we live and work. There are indications that there will be less demand for retail and office space in town centres, freeing up much brownfield land for development. Many families may choose to move further from the South East as they can now work remotely.</p> <p>There has been a change to the way the housing target figure was produced mid-consultation. This includes plans to categorise land as 'protect', 'growth' and 'renewal' areas. The plan to release significant Green Belt land into the hands of developers would risk these highly valued areas becoming growth areas. This is a serious risk to the Green Belt. It would result in a significant loss of planning control to local authorities and local residents and permanently blight our valued landscape. The Glover report has been ignored — this has recommended that the Chilterns AONB becomes a national park — we do not want a sprawl of executive housing estates encroaching on the AONB. There is no agriculture strategy.</p>

QUESTION: Evidence Base comment	<p>Dacorum's target of 922 dwellings is based on out-of-date projections carried out in 2014. Subsequent household projections in 2016 and 2018, by the Office for National Statistics (ONS), have been much lower, with significant declines in London, the South East, and the East of England. For example, in 2014 the ONS projected growth, over 25 years, at 23.1%. In 2016 this projection fell to 17.3%, and in 2018 it fell to 16.2%. Within these projections, increases in the East Midlands, North East, North West, and South West were balanced by significant declines in London, the South East, and the East of England.</p> <p>In Dacorum, the reduced projections led to a fall in the annual requirement for dwellings from 922 in 2014 to 430 in 2018. The trend for working from home rather than commuting to an office, has further reduced the demand for dwellings near train stations within commuting range of London. Future projections for housing requirements in Dacorum are likely to be even lower. So, Dacorum's Local Plan is based on projections that are out of date and that do not reflect current demand.</p> <p>Other planning authorities have declined to use these outdated projections. For example, in October 2020, Buckinghamshire Councillors voted to withdraw their Local Plan and are working on a revised plan to "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law". Dacorum's councillors should follow the example of their Buckinghamshire counterparts, withdraw their Local Plan, and produce a new plan based on current projections.</p>

QUESTION: Evidence Base comment	<p>A Housing numbers</p> <p>I note the discussion provided in Topic Paper 'Development Strategy November 2020': this tracks the history, marshals the data and argues that the dwelling numbers for the Reg18 Plan meets the housing needs for the Borough viz 922 [or recently 1023] pa. I dispute this is the correct basis for the Plan – which is based on 'national requirements' rather than local needs.</p> <p>The paper includes a comment:</p>

Below I set out data drawn from reliable sources e.g. ONS and the study commissioned by the Districts' Joint Housing Needs Assessment quoted in the Plan.

The current dwelling numbers established in the Adopted 2013 Core Strategy sets an annual build rate of 430 pa.

- The Data shown in Fig 2 Housing Trajectory 2020 – 2038 [p 38] records anticipated completions across the Borough for 2020/21 as **654** and 21/22 as **1036** . These are well in excess of the Core Strategy and also the numbers projected by ONS.

The numbers set for the Draft Plan have been based on the ONS projections of housing 'need' but manipulated by a formula adopted by MHCLG to determine the 'national requirements' stated in Para 6.7 above.

355

922 [mutant applied]

497 [new standard applied]

As a result, I object to the adoption by the Borough of the Ministry's numbers: a lesser number to meet the assessed local needs must be agreed upon. This must lead to a revision of the site allocations and a new Plan.

I note the data in Table 6 Affordable Housing Need across South West Hertfordshire [page 62] indicates an assessed need of 611 dwellings pa.

Affordable Housing Need [per annum]

DACORUM

Rented affordable housing

363

Affordable Home Ownership

248

TOTAL

611

I also note that the Borough assumes a continuing policy of requiring 40% of new dwellings should be allocated as 'affordable' on Growth Areas [viz Green Belt], with 35% in the urban area of Hemel Hempstead and 40% elsewhere [DM 1 para a.]

For an area with acute need for homes at 'social rents' [see Para 14.29 et seq p 62] should the proportion not be increased to 50 or 60%?

This would change the market dynamics and deliver a better share to the community of the uplift to land value following the release of (mainly) Green Belt land and consent to development.

QUESTION: Evidence Base comment

I consider the council's Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council's assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrarily done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	<p>I've referenced the Infrastructure Delivery Plan below against this question - Question 4, if my response would be better located against a different question please do so on my behalf.</p> <p>Page 2 - "The infrastructure delivery lead, cost estimates and funding mechanism will be identified where possible. The funding gap between identified funding stream and total estimated cost of infrastructure to support growth will be identified." This work still needs to be completed therefore the plan is not ready for consultation.</p> <p>Page 2 - "This draft Infrastructure Delivery Plan is not at this stage a complete or comprehensive IDP." This work still needs to be completed therefore the plan is not ready for consultation. Page 154 - Key issues for the Tring include: "High reliance on the private car (43% car journeys to work). Additional housing could result in capacity issues at Tring Station car park New housing could result in more locally generated car trips. Limited opportunities for development within the town given strong existing local and historic character. Increasing primary school capacity issues as forecast by the County Council Schools and Education Service equivalent of 0.9 FE by 2021/22. Increasing secondary school capacity issues as forecast by the County Council Schools and Education Service equivalent of 1.4 FE by 2027/28. Potential under capacity of existing local infrastructure such as dentists and health surgeries. New development could harm the setting of the Chilterns AONB, the Grand Union Canal and other interests of acknowledged importance." The cost of addressing these issues has not been determined and nor have DBC or HCC committed to providing the funding to address these issues. They have only provided a figure for the quantum of developer contributions that will be made - this is not the same as developing a budget to address the issues.</p> <p>Page 155 - There are about £3M of sustainable travel improvements required that need to be funded by Herts CC. Has this been committed to?</p>

Page 156 - Provides the developer contributions (£80M build programme for infrastructure) but not the cost of delivering the infrastructure i.e. has the cost of delivering the infrastructure in this plan actually been estimated? It looks to me that DBC has only provided figures for the amount of developer contribution that will be provided rather than the estimated costs of building the infrastructure. If this is the case then the plan is not ready for consultation because DBC has provided no evidence that they have enough funds to deliver the proposed infrastructure in the plan.

There have been no visible assessments made of either of the two A41 junctions at Tring to assess the impact of a 55% increase in traffic journeys on congestion at these major roundabout junctions. Are DBC assuming that these extra journeys on the A41 (either London bound or Aylesbury bound) will be made by bicycle and on foot like the assumption of the 55% increase in journeys within Tring. Without a proper assessment of the A41 junctions the local plan is not ready for consultation.

Has the impact of new housing developments (through the duty to cooperate) along the A41 in Hertfordshire and Buckinghamshire been assessed by Highways England for the major junction of the A41 with the M25. This junction is already congested without increasing the population of Dacorum by 25% and without the increases in population planned for Aylesbury. Without a proper assessment of this major junction the local plan is not ready for consultation.

QUESTION: Evidence Base comment

Finally, it is surely clear that the combination of the changes to working life and commuting prompted by the Covid crisis, the Government's "levelling up" agenda and the long-awaited integration of health and social care mean that, however reasonable this plan might have appeared pre-Covid, this is now time for a rethink.

The facts have changed and it is now appropriate for the Council's thinking to change accordingly.

QUESTION: Evidence Base comment	<p>The Evidence Base that accompanies the Strategy for Growth is extensive in terms of the number of assessments and reports which have been prepared. Overall, it is also considered up to date. However, there is one key document which is considered to be flawed in its assessment.</p> <p>The Urban Capacity Study includes several different options for identifying sites which could contribute to the Council’s housing land supply, including those which could be improved, intensified or redeveloped. The study claims to take a proactive approach to site selection, <i>“including considering those not actively promoted but which could play a part in meeting the future development needs of the borough”</i>. It also provides a table of the types of sites and potential data sources used to identify them (see table 1 of the Urban Capacity Study).</p> <p>Within this list, however, there is a fundamental aspect which is excluded. Table 1 duly considers <i>“Additional opportunities in established uses Large scale redevelopment and redesign of existing residential or economic areas”</i> however, there is no mention of existing retail sites being considered. Of course, not all retail sites will be appropriate for redevelopment, improvement or intensification, but there are there are also a number of opportunities which could arise, such as complete redevelopment for alternative uses where the existing retail use is not allocated and/or integral to the Borough’s overall retail strategy; or as part of a mixed-use redevelopment where some existing provision could be retained alongside delivery of other uses, such as housing.</p>

In light of the above, it is considered that a number of sites within the urban area may have been discounted before having even been assessed and which could make a meaningful contribution to the Council's housing land supply without jeopardising the borough's retail strategy.

Yes / No	
* Yes	
* No	
QUESTION: Evidence Base comment	<ul style="list-style-type: none"> The technical studies undertaken by Crest Nicholson's design team have not identified any technical constraints to development of the site, which is consistent with the findings of the majority of the Council's evidence base to date of the site <p>Landscape Sensitivity Study (ARUP, April 2020)</p>

- The Landscape Sensitivity Study was undertaken to inform the Stage 3 Green Belt Review and residential allocations within the emerging Local Plan. Within the Study, the site (Bk05) is assessed as having *neighbourhood* landscape value, which is the lowest value on the assessment scale, due to its absence of identified landscape features of value and *moderate* susceptibility to change from residential development.
- The site is said to have a reduced sense of remoteness caused by the surrounding development and the loss of tranquillity, negative views, and loss of connection with the wider agricultural landscape structure caused by the A41. This analysis further supports the proposed site allocation in the draft Local Plan.

Green Belt Stage 3 Report (ARUP, August 2020)

- The Site was identified in the Green Belt Stage 3 Review (Final Report) (August 2020), which considers the acceptability of potential housing and employment site allocations within Green Belt boundary terms, provide guidance on any required site mitigation, and any consequential changes to the Green Belt boundary.
- TLP has reviewed the Stage 3 Review in relation to the recommendations made for the Site (Site 4), and support the analysis provided for the site, agreeing that all boundaries (except the south-western) are readily recognisable and likely to be permanent and that the south-western boundary potentially needs strengthening. It is noted that the strengthening of the south western boundary is dependent on whether the adjacent Site 16 ('Land between Shootersway and A41 bypass' (Site BK08) to the west of the site) is also released from the Green Belt. TLP advise that if this occurs the A41 boundary would form the new Green Belt boundary, which would form a readily recognisable, durable and likely permanent boundary and there would be no need to strengthen the boundary within the site (Site 4).
- TLP also highlight that if the Site (Site 4) is released, but not Site 16 from the Green Belt then the narrow strip of land within Site 16 that separates Site 4 from the A41, provides little meaningful benefit in Green Belt terms, and should be released, so that the A41 can become the new Green Belt boundary. Similarly, this applies with regard to the narrow strip of Green Belt between the existing houses and the A41 further to south-east i.e. land considered as part of Site
- This is in accordance with the conclusions drawn in the Comparison Landscape Appraisal undertaken on behalf of Crest Nicholson in December 2017, which states that the site warrants release from the Green Belt, and there is ample opportunity to mitigate landscape sensitivities through woodland belt planting along the southern boundary, and tree planting dispersed through site. These mitigative measures have already been developed effectively into the indicative masterplan layout for the site, as discussed

Local Plan Emerging Strategy for Growth (2020-2038) Background Topic Papers

- The Development Strategy Topic Paper provides an outline of the Council's approach to the growth options taken forward in the draft Local Plan. This, along with the Green Belt and Rural Area Topic Paper, conclude that Dacorum '*needs to release land from the Green Belt to meet its development needs, as urban capacity is not sufficient to*

satisfy the housing need figure'. This will continue to be particularly relevant following the review of the figure in the context of the Government's 16th December announcement about the standard method for local housing

Berkhamsted and Tring Sustainable Transport Study (November 2020)

- The Sustainable Transport Study identifies a number of potential sustainable transport improvements to be implemented across Berkhamsted. SP-B1 (from Figure 6-1 of the Sustainable Transport Study) sets out the improvements identified in relation to Shootersway, mainly providing enhancements to walking and cycling facilities along
- The strategy outlined in the Study and accompanying Topic Paper is to focus on sustainable travel initiatives rather than large infrastructure projects that are principally aimed at highway capacity improvements to address peak commuter period delays.
- The Study also concludes that there is opportunity for new or diverted bus services along These will need to be supported by contributions to support early services and the provision of new bus stop facilities.
- Whilst details relating to the delivery of measures and mechanisms for the collection of financial contributions needs to be defined, the strategy which is based on the promotion of sustainable travel modes is
-
- The range of sustainable measures proposed and delivered by all sites should be considered when determining the need to improve highway junctions. This will ensure priority is afforded to sustainable modes which may reduce car travel and avoid the need for highway capacity improvements.

QUESTION: Evidence Base comment

Yes, broadly speaking, our client agrees that the Evidence Base supporting the evidence base is adequate, up-to-date and relevant. It is critical the soundness tests set out at paragraph 35 of the NPPF are rigorously applied to ensure the Plan is robust and can be found sound.

Paragraph 66 of the NPPF requires housing need to be informed by the latest evidence. Therefore, the Council must correctly apply the Government's new Standard Method and adopt a revised OAN of 1,023 dpa in the interests of preparing a sound and robust new Local Plan.

In respect to the Council's housing trajectory, there is a great deal of reliance on the delivery of a sizeable proportion (circa 55% or 9,251 homes) of housing in the first half of the Plan Period. Given the Council's recent low delivery rates (Housing Delivery Test (HDT) 2020 result of 89%) this is very ambitious, particularly given current market conditions and the recovery from COVID19. The Council should revise their trajectory and ensure the delivery of homes is more evenly distributed across the Plan Period, whilst recognising the overall trajectory should be revised to achieve at least 1,023 dpa.

Regarding the South West Hertfordshire Strategic Housing Market Assessment (SHMA), this is dated January 2016 and grossly underestimates the current OAN for Dacorum with a requirement for only 756 dpa between 2013-2036. Accordingly, this SHMA should be updated to reflect the predicted growth levels for Dacorum, factoring in the Government's new standard and need for a minimum 1,023 dpa.

It is essential that the new Local Plan is supported by a robust and proportionate evidence base on accordance with the NPPF and the soundness tests set out at paragraph 35.

QUESTION: Evidence Base comment

I consider the council ' s Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council ' s assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their all_ocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation

is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment

The Draft Dacorum Infrastructure Delivery Plan (November 2020) does however reference the issues of sewage treatment and wastewater transport. Since 2018 work required as the result of new development is delivered by the relevant statutory undertaker. Therefore the Water Cycle Study Scoping Study, part of the evidence base for the Strategy, is out of date (as it is in other respects) and should be revised as a matter of urgency. Paragraph 15.59 of the Delivery Plan document is difficult to interpret but acknowledges that any upgrades needed will be programmed by Thames Water as part of its five- year planning cycle. Most of the proposed growth areas would require upgrades to wastewater provision and these may take 3-5 years, a period at variance with the Water Cycle Study Scoping Study as referenced above in some respects, especially in relation to upgrades which would be needed to waste- water treatment works. It should be noted however that Thames Water is not keeping up with current development rates elsewhere in its area: in the south of Oxfordshire for example houses have been built, sold and occupied with no sewer connections.

Paragraph 15.79 references the response from Affinity Water that ‘There is sufficient water supply in the region’. This is misleading. It is true if you include parts of its supply area (i.e. around the Thames and further south) which are not yet linked by infrastructure to the Dacorum Borough area, and from where transfers are currently planned to be available from 2040. Affinity Water admits that transfer capacity would need to be studied. The water industry is currently engaged in its WRSE process to study ways of getting more water to this region. Affinity is also partnering Thames Water’s proposal to build a massive new reservoir near Abingdon, which could supply Hertfordshire and other parts of Affinity’s area, but which would have huge and devastating environmental impacts. Best estimates suggest that the reservoir would not to

be finished until the end of this plan period. This reservoir is one of a number of options under consideration by the WRSE process.

QUESTION: Evidence Base comment

No, A lot of it is irrelevant, much is flawed, and most importantly, it's needlessly large and some poorly structure that it's opaque. This is mostly documented above but the highlights are:

- Sustainability appraisal based on "low carbon" not "zero carbon"
- I've included a list of evidence above about the flaws in the key premise underpinning the whole Local Plan, e. the government house building targets.
- As the objective of the Local Plan are incorrect there for key piece of evidence like the transport study are invalid as they assess the wrong things. For instance. The Transport study only assess whether transport can be made "more sustainable" when it should be assessing whether it can be made "zero carbon compatible" inline with the governments national zero carbon target and road to zero The UK climate target is legally binding not aspirational bonus! It's list of interventions are there for completely inadequate.
- Carbon Budgeting doesn't include construction emissions within the year the construction occurs which is an oversight. This means borough will be emitting significantly more GHG's that it's budget allows during years when there is significant construction, but will think it's happily within budget. Such false positives are dangerously misleading, as they could mean the UK or the World is missing it's targets, but all the country/borough think they are doing
- 'South West Herts Economic Study' - Doesn't take account of Pandemic and Climate Emergency, both of which may lead to less/shorter commuting, more working from home, and less big

- Flooding isn't part of climate change mitigation or sustainability, it is a separate environmental concern. It therefore is misleading to list flooding assessments under heading of "climate change and Sustainability" as it gives the impression the local plan as lots of "climate change and Sustainability" evidence when in fact it has very

The biggest problem with evidence base is the size of it. For there to be any accountability or transparency yet the council needs to publish everything (including minutes from all meetings that shape these proposals which are currently absent), but the council also needs to make grant funding available to scrutinise all this information. It cannot publish multiple books worth of information and expect the population over the course of a few months to read and analyse all of it. People independent of the council need to be paid to scrutinise all the information and pull out the key information and issue in formats the public can engage with. I suggest that the Political Foundation model where council makes grants available to political parties to commission external organisations to do detailed scrutiny work based on the number of votes each party received in last election.

QUESTION: Evidence Base comment	<p>The Green Belt and Rural Area topic paper</p> <p>The topic paper identifies that growth in locations such as Flamstead were considered unsuitable on the following five grounds (to which our client's contest):</p> <ol style="list-style-type: none"> 1. "Does not contribute to sustainable development given the lack of facilities available at these locations" - The settlement of Flamstead, although limited in some services, has a close functional relationship with the nearby village of Markyate to which it is connected by public transport. The proposed sites would not change the existing character and function of the village of Flamstead but would secure appropriate growth to remain sustainable. 2. "Runs the risk of the potential merger of settlements if large Green Belt releases were sought in these locations" - The proposed site allocations would not constitute major development but infill and a natural expansion of the village envelope that would avoid sprawl. As previously set out in this letter, these would respect the overall function of the Green Belt in this location with no coalescence risks. As like the proposed employment allocation to the north of the village, the two sites would represent minor incursions into the Green Belt and would not necessitate the entirety of the village becoming inset. 3. "Would require significant large-scale infrastructure provisions that would make schemes unviable in these locations" - The village already requires some infrastructure improvements that could be secured through a moderate housing uplift. The sites in combination would not trigger the need for extensive on or off-site reinforcements. 4. "The assembly of land and the likely timescales required to deliver this would go beyond the plan period" - As indicated in the 2017 call for sites questionnaire, the sites were identified as available within the first part of the plan period. Furthermore, both sites fall within a single landownership and both sites are available immediately for development and could form part of DBC's five year housing land supply. 5. "Larger scale more appropriate sites have been identified around the main urban areas of Dacorum." - While it is acknowledged that main settlements and Growth Areas will deliver the largest housing development sites, the plan identifies the requirement to bring forward sites in large villages and as infill in small villages diversifying the housing offer. Flamstead is sequentially preferable to many non-Green Belt villages, the Local Plan should re-evaluate the current approach and avoid development in less sustainable locations.

The document states that villages such as Flamstead are more sensitive to change and contain parcels of open land within or on the immediate edge of the villages with many houses sitting on generous open plots. These features are said to contribute towards the general openness of the Green Belt and transition into the open countryside must be preserved. The proposed infilling, outside of the Flamstead envelope, would respect the frequency of these open plots. Furthermore, through high quality design the character and scale of existing housing could be replicated to ensure the development is in keeping with its context.

While the NPPF already provides a mechanism to accommodate some limited development in the Green Belt, a site allocation would help to secure measured and sustainable growth in Flamstead through a comprehensively planned approach.

Green Belt Review – Stages 1-3

To undertake the stage 1 Green Belt review, the study combines the settlement hierarchy of various local authorities. The village of Flamstead is identified as third tier settlement which are, for the most part, washed over by Green Belt, in line with the 2017 Settlement Study.

The review states that while the Green Belt seeks to fulfil a national role it also fulfils an important local purpose, that is, to maintain the existing settlement pattern by protecting against coalescence and maintaining the open land, which helps to define the character of those settlements. The review recognises that local authorities such as Dacorum must therefore balance their review of the Green Belt boundary against their other emerging policies in promoting sustainable development.

The review identifies areas within the Green Belt contributing least to Green Belt Purposes. While the sites identified in this letter do contribute towards some of the purposes of the Green Belt, we consider that their development would not adversely prejudice the overall function of the Green Belt in this location.

To date the stage 1-3 Green Belt assessments have not assessed in any detail potential housing sites surrounding the larger Green Belt and Rural Area villages. As demonstrated by the settlement hierarchy study Flamstead outperforms less well served and less accessible non-Green Belt villages where small scale developments would be permitted under the draft policies in the consultation document. This is the perverse outcome of ruling out any Green Belt sites beyond Hemel Hempstead, the market towns and large villages.

Figure 4.2 within the stage 3 Green Belt report (see Figure 3 – below) provides a helpful illustration setting out how Green Belt purpose 1 can be visualised and highlighting where enclosed infill may be appropriate for future development in the Green Belt.

Flamstead has only been assessed as part of a much larger parcel (GB18A – Partial Green Belt Land to West of Markyate) within the Stage 1 report Green Belt Review Purposes Assessment. Annex 1 – Parcel Assessment Sheets for Dacorum Borough Council (November, 2013). The Principal Function / Summary states that GB18A makes a:

“Significant contribution towards checking sprawl from Luton and Dunstable, safeguarding the countryside and maintaining the existing settlement pattern. Partial contribution towards preventing merging and preserving the setting of Flamstead and Markyate. Overall the parcel contributes significantly towards 3 out of 5 Green Belt purposes.”

None of the functions noted (above) would be precluded through the development of parcels 53 and 55 in Flamstead. The stage 1 report is now over 7 years old, our clients request that due consideration is afforded to the villages washed over by the Green Belt (as per the methodology applied in the stage 2-3 review). Especially for sustainable infill sites

such as our client's landholdings that can positively contribute to DBC's local housing need (now set at a minimum of 1,023dpa).

The Development Strategy topic paper

This topic paper reinforces the Council's view that smaller settlements have greater constraints and sensitivities and therefore limited capacity and scope of services.

The topic paper however confirms that the Growth Strategy approach, set out in the Draft Local Plan, does not rule out opportunities for contribution from smaller scaler development in the countryside, "modestly supporting their services with a small increase in population". The topic paper goes on to cite village infilling and rural exceptions for affordable housing on the edge of rural settlements and the role that Neighbourhood Plans can play in supporting this moderate growth. The site allocations 53 and 55 at Flamstead would constitute a moderate growth and sustainable growth approach for villages of this size.

The Site Selection topic paper

The topic paper justifies the exclusion of some smaller sites in villages from detailed testing as they would likely result in less sustainable forms of development and further limit access to services and facilities. The paper specifies that these sites have been assessed individually and in combination before being discarded from further consideration. Site allocations 53 and 55 however appear to have been omitted from the detailed testing solely on the basis that they were located in greenfield sites in the Green Belt. We believe this site selection approach wrongfully and prematurely dismisses sustainable sites with limited environmental constraints that offer opportunities for sustainable development in village locations.

DBC Site Assessment Study - Volumes 1-4 (AECOM, January 2020) and Addendum (November 2020)

The DBC Site Assessment Study Volume 3 assesses all sites submitted as part of the call for sites, identifying key transport, environmental, economic and spatial conclusions. While the January 2020 Site Assessment Study Volume 3 identified the two Flamstead sites as unsuitable for allocation, this was principally on the basis that the sites are within the Green Belt (emphasis added):

"Site performs relatively well on most criteria. However it is greenfield land in the Green Belt in a location where it is not proposed to release Green Belt and as such is considered unsuitable for allocation." – Site 53

"Site is very constrained in terms of access but otherwise performs well on wide range of criteria. However it comprises greenfield land in the Green Belt in a location where it is not proposed to release Green Belt land and any redevelopment cannot result in a decrease in the site's existing openness. Therefore, the site is considered unsuitable for the purposes of this study." – Site 55

The sites present very limited constraints in terms of suitability, achievability and availability of development and present legitimate considerations for Local Plan allocations.

The DBC Site Assessment Study Volume 3 recognises that both sites have merit as locations for development. It also notes a number of potential constraints, we have addressed these concerns (Table 1 - overleaf) providing an update on a number of matters.

Settlement Hierarchy Study Main Report (October 2017)

The latest settlement hierarchy study dates from 2017 and formed part of the evidence base for the partial review of the 2013 Core Strategy DPD. As mentioned in the document: "A key part of the evidence base is an assessment of the

sustainability of all the settlements in the Borough alongside an assessment of their ability to accommodate growth". In the local context it is recognised that Flamstead remains smaller in size and service provision when compared with neighbouring Markyate. While the strict village envelope might be that of a 'Small Village', this excludes adjacent developments reliant on Flamstead. To that end we believe that a review of the settlement hierarchy study should be undertaken and consider re-assigning Flamstead to 'Large Village' allowing it to accommodate future growth, while respecting the fundamental aims and purposes of the Green Belt. The two sites in combination offer opportunities for the two sites to be comprehensively planned, including community benefits.

The settlement hierarchy description for Small Villages in the Green Belt suggests that these sites fall in an area of significant environmental constraints and include areas of high landscape quality. This is not the case for parcels 53 and 55. While parts of Flamstead are covered by significant environmental and landscape constraints, the locations of the sites in question, outside of the settlement boundary, are not.

The Study ranks settlements according to their population size and the range of services and facilities they provide. Furthermore, it is informed by an understanding of their relationship with other settlements and accessibility. The Emerging Local Plan mentions the relationship between Flamstead and Markyate and the need for the latter to grow in order to overcome its village centre decline. Given the reliance of Flamstead on Markyate's services, a population growth at Flamstead would likely help in supporting and stabilising the vibrancy and vitality of Markyate's village centre as well as Flamstead itself.

The Settlement Profile paper published in 2017 to support the Settlement hierarchy study included Parish Council comments. These mentioned a need for more frequent bus services and better broadband speed. These infrastructure requirements could be achieved through well planned growth in the village.

Tables 2 and 3 (overleaf) are combined in the study to provide an overall Settlement Hierarchy Assessment (see Table 4). This shows that Flamstead is a sequentially preferable location to the locations where the proposed policy framework (as per the consultation document) would support growth in less sustainable locations and thus disincentivises growth Flamstead.

Urban Capacity Study - Main Report (November 2020)

The Urban Capacity Study identifies that the borough has an estimated urban capacity for approximately 10,440 dwellings and an estimated 514 dwellings in rural areas. The study also recognises that the Local Plan should, when considering any release of land from the Green Belt, fully recognise the borough's existing capacity. As further requirements have been identified through the new housing needs assessment method, further pressure is placed on this existing capacity. Markyate is identified as one of the borough's six main settlement. Its proximity to Flamstead positions the latter as a satellite of Markyate. With further growth at Markyate the moderate growth proposed at Flamstead on our client's landholdings would not conflict but offer proportionate growth across the area, further encouraging economic development and boosting the vitality at Markyate and Flamstead.

Hertfordshire Landscape Strategy Landscape Character Assessment for Dacorum SPG (May 2004)

The Landscape character assessment for Markyate Ridges and Valleys (see Figure 5 - below) identifies Flamstead as lying on a ridge and therefore less concealed from views than other parts of the character area. The document notes that some areas of arable land at Flamstead are however 'quite open'. The assessment also identifies built development

on the settlement fringe of Flamstead as being generally of low impact. However, within the area views are “framed and filtered by landform and overgrown hedgerows and woodland belts”.

In terms of conditions, the management of semi-natural habitat is characterised as ‘not obvious’ leaving room for improvement. Further development can create opportunities for further mitigation and enhancement of the existing natural environment (including biodiversity net gain and improved access to the countryside in this location). The proposed development sites would also constitute infill and therefore maintain the ‘localised’ nature of land coverage in this character area.

Dacorum Borough Landscape Sensitivity Study (April 2020)

The document adds to the Landscape Character assessment made for Markyate in the Dacorum landscape character assessment, identifying the St Leonard’s Church spire at Flamstead as a local landmark. Any development at Flamstead will need to consider the impact on views of the spire. The

proposed site would be allocated for housing development and would need to meet the existing low density character, respecting the existing character and heritage of the village.

The presence of the Chilterns AONB designation of national importance would also be respected with design sympathetic to the local character however the distance of the sites means that the impact would most likely be negligible. Development would also seek to respect the recreational value attached to PRowS and seek to enhance these, in line with the NPPF.

QUESTION: Evidence Base comment	Development Strategy and Urban Capacity Study

7.5 The Development Strategy Topic Paper acknowledges that Green Belt covers over half the Borough with the AONB overlapping and extending beyond this. In practice this means that most of the land outside of the key settlements is identified as areas of development restraint. Green Belt boundaries may be reviewed through the Local Plan process. This does not apply to the AONB. This Paper sets out the various options which have not been pursued and explains the rationale for the preferred strategy based on meeting development needs; capacity and delivery infrastructure; 'Footnote 9' constraints (now Footnote 6 in 2019 NPPF); and sustainable locations. This is then reflected in emerging Plan's spatial strategy, delivery strategies and proposed allocations. This approach is supported as it allows for growth to be delivered in the most sustainable locations and where infrastructure can be provided to support this. This approach aligns with national policy (paragraph 138 of the NPPF) which is clear that when reviewing Green Belt boundaries, the need to promote sustainable patterns of development should be taken into account.

7.6 The Urban Capacity Study provides a comprehensive assessment of the capacity for urban sites to meet housing need in the Borough. This includes consideration of previously allocated sites, new proposed allocations and windfall sites. It is considered this effectively captures all available urban sites. It is also noted that high density assumptions have been made on the vast majority of sites to make best use of development land. The Study concludes that there is an estimated urban capacity of approximately 10,440 dwellings within the Borough.

The Urban Capacity Study also notes that there is a total estimated rural capacity of 514 dwellings. This gives an overall capacity for the Borough of circa 11,000 dwellings. It is clear that there is not sufficient capacity to deliver the minimum housing need identified, even before this is revised to reflect the standard method figure. This means that further sites will need to be allocated through the Local Plan process. It also provides the evidence substantiating the need to review the Green Belt in order to deliver the minimum housing need for the Borough. This supports the exceptional justification required to amend Green Belt boundaries.

Green Belt Review – Stage Three

7.7 At this Stage, the purpose of the Green Belt Review is to assess potential site allocations that lie within the Green Belt, consider the acceptability of the sites in Green Belt boundary terms and provide site-specific advice on any mitigation required.

7.8 In terms of New Mill Table 4.1 recommended strengthening of the Green Belt if released. This was the recommendation for thirty of a total of 34 sites assessed. Table 5.1 presents the Summary of Landscape Findings, New Mill was assessed as being of neighbourhood value of moderate susceptibility and sensitivity. Other proposed allocations in Tring were also assessed as being of neighbourhood value of moderate susceptibility and sensitivity with the exception of East of Tring which is moderate-high.

7.9 Figure 6.13 shows the land to be removed/added to Green Belt and new Green Belt boundary for Tring. New Mill (reference 132) is shown to be removed from the Green Belt. The existing boundary to the north-west of the site is not proposed to change and Bulbourne Road will remain as the clear, defensible boundary. Further land is proposed to be removed from the Green Belt to the north-east/east of the site through a proposed allocation known as East of Tring (reference 124). The amended boundary will be beyond this allocation rather than directly adjoining New Mill.

Site Selection

7.10 The Site Selection Topic Paper draws the various evidence base documents and sets out how these have influenced site selection decisions. This paper works through the methodology from and NPPG.

7.11 Drawing on the Urban Capacity Study discussed above, this Paper also sets out that it is not possible to meet future housing requirements within the built-up area of the six main settlements. The Paper works through Paragraph 137 of the NPPF which sets out that for exceptional circumstances to exist it must be demonstrated that all other reasonable options for meeting the identified need have been fully examined. This includes:

- a) Makes as much use as possible of suitable brownfield sites and underutilised land;
- b) Optimises the density of development in line with Chapter 11 of this Framework;
- c) Has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.

7.12 In terms of (a) and (b) it is agreed that the Urban Capacity Study (which also considers rural capacity) has clearly considered opportunities for previously developed and underutilised land. The densities recommended in the Urban Capacity Study are high, notably in Hemel Hempstead which as the strategic settlement can accommodate higher densities. The evidence base supports that these two options have been fully explored.

7.13 In terms of (c) the Paper notes that neighbouring authorities are similarly constrained by Green Belt and AONB. This will need to be supported by relevant Statement(s) of Common Ground at the next stage of plan preparation.

7.14 In terms of land not designated as Green Belt or AONB, only five parcels of land have been promoted for development with an estimated development potential of 128 dwellings. This is not sufficient to meet the identified needs and, due to the location of non-designated land, would not reflect sustainable patterns of development. The Paper sets out that the option of a new settlement outside of the Green Belt has also been considered but there has been no evidence presented that this would be deliverable or developable in the Plan period. It is agreed that this option may be discounted for this Plan.

7.15 Table 7 sets out the justification for excluding sites from detailed testing. This reasoning is clearly explained and this approach is supported.

7.16 Table 16 sets out the recommended allocations for Tring. This includes three new allocations and two existing allocations. Paragraph 6.17 explains that significant growth in Tring will enable the delivery of new infrastructure and consolidate the town's role as the most sustainable location outside of Hemel Hempstead and Berkhamstead. This approach is supported and closely aligns with the spatial strategy set out at Policy SP2. Paragraph 6.18 continues that sufficient mitigation can be provided through site-specific policy and other policy requirements included in the draft Plan. This is supported and a number of the policies are discussed in the preceding section. This is discussed with reference to New Mill in Section 8.

QUESTION: Evidence Base comment	<p>I consider the council 's Green Belt assessment as not up to date: The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review: The council's assessment of Green belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrarily done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.</p> <p>This is consistent with the approach to assessment of the Green-Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.</p>

QUESTION: Evidence Base comment	<p>6. The DLP Sustainable Transport Study does not show current volumes of traffic flow, and then that projected at the end of the Local Plan, arising from the proposed new homes/population growth. Therefore, the Draft Local Plan does not define the social impact of the proposed growth in the town and the reduction in the quality of life to the existing citizens.</p>

On further inspection its facts/figures/evaluations do not use consistent base markers for data/statistics and does not clearly state the source/date/nature of the information. An example is Berkhamsted, the DLP has statements where the population data sometimes is Berkhamsted only, sometimes includes Northchurch, sometimes 2011 census and sometimes 2015/2017/2019. There is no clear base figure that is being worked to, so it is not easy to understand the potential impact.

QUESTION: Evidence Base comment

The numbers are questionable. The government initially based the numbers on a formula now known as 'The mutant algorithm'.

In December the government announced it would ditch this algorithm — many reasonably thought that the proposed numbers in the local plan would therefore fall. BUT THE GOVERNMENT CHANGED THE STATISTICS TO JUSTIFY THE NUMBERS ANYWAY — THE NUMBERS OF PROPOSED HOUSES HAVE THEREFORE INCREASED...shocking!

QUESTION: Evidence Base comment	<p>Dacorum's Local Plan is not in keeping with its own attitudes in its Draft Site Sustainability Appraisals and its Draft Infrastructure Delivery Plan. The latter saying for the Shootersway sites.</p> <p>“ Development of this site would likely result in an increase in traffic to and from the site at peak hours, which would have a limited impact upon the local road network. If larger scale growth is proposed in the south west of Berkhamsted, it is likely that this would give rise to further traffic issues along Shootersway, particularly at the junction with the A416/Kings Road and the A41 junction. “ For Darr's Lane, wording is amplified:</p> <p>“...Development is likely to have an impact on the local road network at peak periods, including along Shootersway and Kings Road/A416. Significant improvements would likely be required, including enhancements to Darr's Lane, Durrants Lane, Berkhamsted High Street, Shootersway, Kings Road and the A416. “</p> <p>Similar remarks are included in the Draft Infrastructure Delivery Plan (App B) that some of the sites are relatively close to bus transport :</p> <p>Haslems Field = “Site is a 15-20 minute walk from the frequent 500/501 service to Watford. The 502 and 532 bus service to Hemel Hempstead is a 10 minute walk and is infrequent in comparison to the 500/501 service. “</p> <p>Darr's Lane = “Site is within walking distance to the frequent 500 bus services to both Watford and Aylesbury. Site is also within walking distance to the less frequent bus service of 532 to Hemel Hempstead.</p> <p>A site of this scale has the potential to provide new/enhanced public transport connections with the existing town and wider area. “</p> <p>Sites might be 15-20 minutes walk to access the A4251 and main bus services. BUT Up-hill on way home tired, then time = ?? What about on cold winter days, dark morning and dark evenings??</p> <p>Equally not easy for young mum with young family in tow during the daytime – particularly on bad weather days. What about infirm etc.</p> <p>Now add to above, for Darr's Lane, that for half of the 1.2Km walk to the A4251, the route is single-track, no street-lights, and no pathways.</p>

QUESTION: Evidence Base comment	<p>Section 10 of this Paper sets out the Council's approach to providing employment land within the Green Belt. It is anticipated that much of its employment need will be met within St Albans boundary, however, there is still a need to deliver some additional employment growth to meet the needs of the Borough. Five sites are identified for this purpose:</p> <ul style="list-style-type: none"> • Bovingdon Brickworks (expansion), Bovingdon • Bourne End Mills (expansion), Bourne End • Dunsley Farm, Tring • Land at the corner of A41 and Two Waters Road, Hemel Hempstead

- Watling Street Truckstop, London Road Flamstead

Of these sites, four are in the Green Belt and are small in scale. The exception is Dunsley Farm which will come forward as part of a proposed housing allocation.

The Council believes that the approach to providing the employment land sites is consistent with the NPPF paragraph 145, which relates to forms of development that are 'appropriate in the Green Belt'. Although, not identified in the Background Topic Paper, it is considered that paragraph 146 would apply to Watling Street Truckstop, as this is local transport References to the mechanisms for delivering the land could helpfully be included in Policy SP11.

Paragraph 10.14 confirms that *“The expansion of the Watling Street truck stop has been demonstrated to be an essential piece of infrastructure given Dacorum's location along the M1 and the critical level of need for the expansion of services in this location”*. As identified above, the preference is for the site to be removed from the Green Belt entirely, it is considered that this would form the exceptional justification for removing this site from the Green Belt as per comments in relation to Policy SP11.

In line with national policy, the Policy considers the need for appropriate and defensible boundaries. If Watling Street Truckstop was to be removed from the Green Belt appropriate and defensible boundaries could be This is discussed further in Section 6.

Further Comments

It is recognised that the Plan is currently at Regulation 18 Stage and that the evidence base will continue to evolve and be built upon as the Plan progresses. It is considered that the inclusion of the Maylands Growth Corridor Study Stage 2 Options and Strategy Scheme Concept 7 Option Report, prepared by Hertfordshire County Council and LEP, and National Survey of Lorry Parking 2017, Highways England, would be helpful to be included as both demonstrate the need for additional HGV parking in this area. The Hertfordshire County Council Chequers Hill and A5183 Junction Improvement scheme could also be helpfully referenced in the evidence base, as a further component that the proposed development will seek to address.

Green Belt

The 2016 Stage 2 Green Belt Review and Landscape Appraisal concluded that the development of our client's site would represent "infill within the existing settlement footprint", that it "would not have any tangible impact upon the separation of the settlements", and that "with appropriate screening along its eastern boundary, it would not compromise the integrity of the wider Green Belt."

The proposed site was categorised, in terms of 'the strength of the Green Belt against NPPF Purposes', as 'weakly contributing' whereas the locations of BK05, BK06 and BK08 were all identified as 'moderately contributing'. Our client's site was therefore stated as 'not compromising the ability of the wider Green Belt to meet its purposes' where as BK06 is stated as having the potential to partially compromises the ability of the Green Belt to meet its purposes.

The assessment concludes that BK8 'would compromise the ability of the wider Green Belt to meet its purpose' and was excluded from further consideration. However, the site appears to be included in the Stage 3 Green Belt Review Final Report. This report makes no distinction between BK05, BK06 and BK8 in terms Green Belt purpose or effect thereon.

It is not clear why this is the case as the areas defined in in the Stage 2 report do not materially differ to that those defined as the site allocation boundaries in the Stage 3 report.

Notwithstanding this it is clear that the impact from the development of the proposed site would represent infill within the existing settlement footprint and would have materially less impact on the Green Belt than BK06 and BK8 that would result in pushing built form into the Green Belt and extending the existing defined settlement boundary.

QUESTION: Evidence Base comment

The evidence base is certainly extensive - too much so for individuals to review in its entirety, or to comment on in any detail. However, a key concern is that the Plan does not appear to have full regard to all of the prior studies - for example, as explained in Section 5 above in relation to sites Bk06 and Bk08, the Green Belt Phase 1 and 2 studies which did support the extensive development on Green Belt sites now countenanced.

QUESTION: Evidence Base comment	<p>6.0 The updated evidence base, in particular the Green Belt Study and Site Assessment Study, is supported whereby this provides justification for the allocation of land at Homefield, Bovingdon, as discussed above.</p> <p>6.1 To further assist Dacorum and to demonstrate that the site remains available to contribute towards meeting Dacorum's pressing housing need in the early part of the new Local Plan period, an updated delivery timetable is provided below. Land at Homefield is proposed to deliver around 145 dwellings in total. The scale of the site enables Planning Permission to be applied for in Full and come forward as a single phase, with Taylor Wimpey operating one sales outlet. Moreover, market conditions in Dacorum remain positive, with strong buyer interest in new homes, giving further comfort of Taylor Wimpey's commitment to the early delivery of the site.</p> <p>6.2 Overall, it is estimated that the site will deliver homes at a rate of around 50 dwellings per annum. This means that a development of 145 dwellings could be completed during a build period of around three years.</p> <p>6.3 Mapping this out against the Local Plan process, Figure 1 below highlights the potential for commencement of development at the site can be achieved around 18 months after adoption of the Plan, allowing for the grant of Full Planning Permission and discharge of conditions; meaning the site could be built out completely within four years of adoption of the Plan.</p>

**QUESTION: Evidence
Base comment**

Housing Trajectory:

No draft housing trajectory has been included within the draft Plan. HLM consider this omission is unacceptable as the ability to meet the housing requirement in the plan period is fundamental to any consultation on preferred options. It is necessary to understand the Councils assumptions on the rate of housing delivery expected by the identified brownfield and greenfield sites to be able to respond on whether the proposed approach is likely to be appropriate and achievable by 2038.

Anticipated delays in bringing forward a consistent supply of housing through reliance upon urban capacity sites and at HGC will impact upon the plans ability to deliver the required growth by 2038. We do not consider there is sufficient flexibility built into the housing trajectory. The Council should provide an updated housing trajectory to reflect the likely adoption date and any changes to the 2019/20 completions and the anticipated 2020/21 completions based on current knowledge of planning applications and sites.

HLM consider that additional sites may be required to plug the gap between the housing requirement and the housing trajectory. Such sites should be identified at the principle town as a priority, given that it is likely to be the settlement where the trajectory falls short. Opportunities at the edge of Hemel should be revisited and reassessed to identify sites to meet additional need. This includes Land at Berkhamsted Road (site 78). The site performed well against the SA criteria and is a suitable candidate for a phased delivery of housing to ensure that the strategy can deliver at the anticipated pace.

HGC:

The approach taken in the Local Plan preparation is unduly influenced by the Councils desire to deliver HGC. This has shaped how the spatial strategy and site selection process has been undertaken. As it has been an input at the early stages of formulating the strategy, all work has been tailored to achieve a pre-determined outcome from the various assessments, rather than it being a fair and transparent process. There is a lack of evidence to support the inclusion of HGC in this draft Reg 18 plan.

In terms of opportunities, HLM recognise the longer term strategy of providing opportunities to deliver significant improvements to infrastructure (schools, highways and healthcare) through the garden communities programme which could benefit existing as well as new communities and help deliver St Albans housing requirements in a sustainable way. HLM considers that strategically planned development in Hemel Garden Communities in the north-eastern part of the town could provide longer-term solutions to transport challenges in the vicinity. However, the delivery of Phase 1 within the plan period, without the certainty of the route alignments and certainty of the wider strategy being delivered (St Albans Local plan failed) is premature in advance of the South West Hertfordshire Spatial Plan. The joint Councils have opted to prepare a strategic framework to deliver cross-boundary solutions to future development. This is the correct process to bring forward HGC site for development.

There is no clear evidence supporting the delivery of new infrastructure for HGC. We acknowledge the Council's historic vision to provide a relief road for HGC. However, there is no certainty that the extent of development proposed is capable of being achieved and to deliver the new road infrastructure. There is a lack of clarity surrounding the infrastructure requirements that are proposed to demonstrate delivery of Phase 1 in a timely and efficient manner.

HLM are not aware of any detailed strategic site options assessment as part of the evidence base or the consideration of reasonable alternatives to date to the preferred spatial strategy. There has been no comparative assessment to Phase 1 of HGC through the SA process. It is not clear how the Council has considered the relative performance of other large sites. There are no clear parameters set out within the SLAA, the SA process or the subsequent site selection topic paper (November 2020).

HLM can find no evidence of sites being considered cumulatively to deliver strategic-scale extensions at sustainable settlements, including Hemel. The only option that appears to have been considered in any meaningful way is HGC.

Overall, HLM observe that the site sifting process that was undertaken was not objective and has been biased by a preferred strategy of delivering the HGC allocation to provide a phase 1. There is no evidence available to understand what infrastructure is required to be delivered alongside Phase 1, whether the land is under control or how any early development will safeguard the key infrastructure principles required to deliver the full HGC scheme, including the nature of the transport hub.

Gaps in Transport Evidence:

The Dacorum Local Plan Emerging Strategy for Growth (2020-2038) is informed by a number of transport related studies and evidence base, all of which is available for scrutiny as part of this round of consultation. These include a Transport Topic Paper (November 2020), a Dacorum Local Plan Strategic Transport Modelling Report (July 2020), a Berkhamsted and Tring Sustainable Transport Study (October 2020) and a draft Infrastructure Delivery Plan (November 2020).

The Local Plan also refers to a Hemel Hempstead Sustainable Transport Study, produced in conjunction with Hertfordshire County Council (HCC), described as the document that will identify the interventions necessary to support the development of Growth Areas, specific sites, and to inform the Infrastructure Delivery Plan. Indeed, the Site Selection Topic Paper (November 2020), states at Table 13 that the Study has been used to inform the site allocations in relation to access, highways and sustainable transport.

However, despite the weighting of DBC's housing and employment allocations toward Hemel Hempstead, the Hemel Hempstead Sustainable Transport Study has not, as yet, been included within the evidence base and we understand there are no plans to release this during this round of consultation. Given the strong reliance the growth aspirations are placing on a transport strategy that promotes sustainable travel at both a site wide and across the settlement, it is believed this document should form part of this round of consultation so that the justification for specific site allocations can be considered in full.

Other documents are also referenced within the evidence base, such as the Hemel Garden Communities Transport Plan, which also does not appear to form part of this round of consultation. Given local plan allocations include part of the Garden Communities to the north of Hemel Hempstead (site HH01) and land to be safeguarded for a future phase (site HH02), it is believed that this Transport Plan should also be available for scrutiny at this time, to ensure the various studies are complementary and the cumulative impact of development in this area has been tested and a mitigation strategy adopted.

There is some concern therefore that this round of consultation is inviting comment on potential site allocations without sufficient evidence having been presented, given the link between their allocation and the associated transport strategy.

Unclear Strategy and Traffic Model Assumptions:

The evidence base includes a Strategic Modelling Report, dated July 2020, prepared by AECOM, and a Transport Topic Paper, dated November 2020, prepared by ITP.

The Modelling Report details the results of COMET testing for potential development scenarios within DBC, compared against a baseline scenario. The development scenarios allow for an assumed scale of development totalling 2,000 units within the North Hemel Hempstead site. No other specific sites within Hemel Hempstead are referenced within the modelling analysis and instead, 'background growth' across DBC is referenced. It is worth clarifying therefore if the other draft allocations within the emerging Local Plan, which weight development toward Hemel Hempstead, have been sufficiently allowed for within this modelling assessment as this is unclear. Clarification should also be provided regarding assumptions on scale of employment development within Maylands and the adjacent Enterprise Zone.

The development scenarios include the provision of a Northern Link Road through the North Hemel Hempstead site allocation as either a link between Leighton Buzzard Road and Redbourn Road, or a shorter version that connects Leighton Buzzard Road with Link Road. The results of the modelling suggest that the longer link road would perform a strategic function and attract a greater redistribution of strategic traffic along this route, resulting in more traffic also accessing the M1 Junction 8 via a potential new spine road through Maylands.

The analysis of the shorter link road scenario suggests that it will not perform this strategic function, instead only attracting local traffic and resulting in more traffic using the A414 through Hemel Hempstead. Reviewing the assumed alignment of the shorter link road within the COMET report does raise some queries however as to its function as it connects with Link Road only a short distance east of the existing Leighton Buzzard Road junction and appears to simply operate as the second form of access for the North Hemel Hempstead site allocation. This is evident in Figures 5- 40/5.41, where only a small number of vehicles are shown as using the route (115 two way flows in the AM peak and 138 vehicles in the PM peak).

Ultimately, the analysis concludes that delays and stress levels across either of these scenarios are broadly similar, but does not go as far as to recommend which scenario should be adopted in terms of the link road.

The Transport Topic Paper then provides a summary of the transport evidence base prepared to date to inform the Local Plan, including this COMET report, summarising the package of transport interventions that are available to support the growth aspirations, acknowledging that this will evolve as part of the current round of consultation.

With regards to the Northern Link Road option, the Paper appears to identify a hybrid arrangement, where a longer link road option is presented, but that it is treated to provide priority to bus movements, therefore discouraging it from providing any strategic function, evident below.

[see image 4]

The strategy for the Northern Link Road is, therefore, at this stage, unclear. There does not appear to be a confirmed approach as to whether it is something that would be provided, the form it would take, and crucially if it is indeed essential to support the growth aspirations within the Local Plan.

This is particularly relevant for the North Hemel Hempstead draft allocation as it will align through that site, encouraging traffic to use this route to access the M1 Junction 8 without being overly reliant on the A414 and/or placing additional pressures on the local road network to the south of the site.

Additionally, the Northern Link Route option detailed in The Paper and within the Additional Allocation COMET scenario, aligns the link road through part of North Hemel Hempstead that is in fact not being promoted as a housing site that will be delivered within this Local Plan period. The Local Plan identifies that part of North Hemel Hempstead will be released from Green Belt within this period, but will not be developed until after 2038, referred to as Phase 2. There is, therefore, a question mark as to whether the link road would/could be delivered within this plan period given its alignment is through a wider site that will not be developed within this period. The Figure below identifies the Phase 2 North Hemel Hempstead site (pink) and the indicative alignment of the Northern Link Road through it (green).

[see image 5]

Also relevant to this concern is the reliance on the delivery of this Northern Link Road alignment through the adjacent St Albans District Council. Given this adjacent authority have relatively recently withdrawn their Local Plan, there are further concerns about the deliverability of the link road and spine road through Maylands.

There are other parts of the COMET report, referenced within The Paper, that also suggest the wider strategy is unclear. Across all parts of the transport related evidence, reference is given to the A414 becoming a sustainable travel corridor, with bus priority, dedicated bus lanes and, in places, the transfer of existing traffic lanes to accommodate this bus infrastructure. The COMET report states that within the scenarios tested, the A414 remains as a dual carriageway, acknowledging that should it be reduced to one traffic lane this would place additional stress on parallel east-west routes. Given the intention for the A414 will likely result in the loss of capacity along this route for through traffic, the modelling analysis should include scenarios where the capacity of the A414 is reduced, which in turn may further increase the necessity for the Northern Link Road to support development within this area.

The COMET report acknowledges that the analysis undertaken is indicative and is in order to give a general picture of potential capacity constraints as a result of the allocations. Site specific development proposals would need to be assessed at a more detailed local level using junction modelling software to understand the true impact of any proposal. The report also acknowledges that trip generation assumptions for individual allocations that have been adopted within the analysis are likely to be lower than what may be submitted as part of a planning application. This is evident in Figure 5.25, which seems to suggest that the Hemel Hempstead North (2000 units) allocation would generate 170 exit movements in the AM peak and 144 entry movements in the PM peak, with two-way flows being 203 in the AM peak and 209 in the PM peak.

Whilst it is appreciated that the site will promote a range of interventions to support and encourage sustainable travel, these trips assumptions are very low for this scale of development and some clarification on this is required. To demonstrate this, using a standard TRICS based approach to generate residential trip rates, it would not be unreasonable to apply rates of, around, 0.5 two way trips per unit, in each of the AM and PM peak, as was adopted within a Transport Assessment submitted in support of the West Hemel Hempstead planning application. Applying these trip rates to the draft allocation of 1,500 units results in peak hour trip generation totalling 750 vehicle movements, nearly 4 times higher than has been

assumed in the COMET modelling analysis. As such, there are additional queries as to the requirement for the Northern Link Road in this area should trip generation from the allocation have been underestimated.

Similar comments are made with regards to testing of development aspirations within Berkhamsted and Tring. For a site, Land East of Berkhamsted, the COMET analysis generated two way AM peak movements of 163 vehicles for a development proposal of 2000 units. Again, whilst the implementation of various measures will encourage active travel and bus use, the vehicular trip rates are considered to be very low. The Berkhamsted and Tring Sustainable Transport Study concludes that COMET outputs have been used to inform the adopted transport interventions, which seek to avoid new road links and junctions, stating that the COMET models do not indicate that there is a requirement for large scale interventions. If the COMET modelling is underestimating trip generation across Tring and Berkhamsted, then the strategy to focus purely on active modes improvements without some consideration of highway capacity may generate some concerns with existing residents.

Infrastructure Funding

The evidence base is supported by a Draft Infrastructure Delivery Plan (November (2020))IDP, which seeks to set out infrastructure required to support the delivery of the Local Plan. It is acknowledged that the IDP will continue to evolve to inform Local Plan revisions, with subsequent revisions to include prioritisation, cost apportionment, timing and phasing.

Table 41(a) of the IDP identifies a range of highways and transport related interventions necessary to support the growth aspirations, which range from £180 million to £270 million. This list excludes the Northern Link Road through the draft allocations and the spine road to Maylands, which we assume is due to the developments being obligated to provide this.

Appendix B of the IDP then identifies apportionment, developer contributions and other funding source assumptions in relation to each of these schemes. However, for each highway proposal, funding sources are identified as 'To Be Confirmed,' whereas each other type of infrastructure (schooling/green infrastructure / health infrastructure etc) each have capital costs and assignment identified.

There is a concern therefore that none of the highway interventions have any funding assigned to them and, due to their scale, be reliant on a large proportion being funded by Government or other sources such as Local Enterprise Partnerships, which could potentially result in some interventions being prioritised over others and therefore ultimately not delivered.

Given the cumulative impact of development aspirations for North and East Hemel Hempstead is reliant on a range of different types of interventions, many of which are costly, there are queries over their deliverability.

The same concerns are raised with regards to the transport interventions necessary to support the development aspirations within Berkhamsted and Tring, each of which is also unconfirmed.

Transport related comments on the emerging Local Plan can therefore be summarised as follows:

- Consultation on the Local Plan is being invited without the full evidence base having been shared, primarily the Hemel Hempstead Sustainable Transport Strategy, which will identify interventions at the site wide level and settlement wide. Given the interrelationship between the site allocation and transport mitigations it is essential these are reviewed in tandem.

- The strategy is unclear in terms of the form, requirement and deliverability of the Northern Link Road. It's full delivery is reliant on sites that will not come forward within this Local Plan period and the adjacent local planning authority that has recently withdrawn its Local Plan. Should the North Hemel Hempstead site be reliant on its delivery then the allocation is potentially at risk.
- The transport interventions have been informed by COMET modelling that are based on assumptions that are potentially a concern, with very low levels of vehicular trip generation and no allowance for reductions in capacity on the A414 that may occur via the delivery of the sustainable travel corridor.
- There are concerns regarding the lack of funding of the various transport interventions that have been identified. Where the cumulative impact of development within the North Hemel Hempstead area requires costly interventions to be delivered, such as the Northern Link Road, then a lack of infrastructure funding raises questions as to the whether they are acceptable sites for allocation/safeguarding within the draft Local Plan.

QUESTION: Evidence Base comment	<p>1 The DLP Sustainable Transport Study does not show current volumes of traffic flow, and then that projected at the end of the Local Plan, arising from the proposed new homes/population growth. Therefore, the Draft Local Plan does not define the social impact of the proposed growth in the town and the reduction in the quality of life to the existing citizens.</p> <p>On further inspection its facts/figures/evaluations do not use consistent base markers for data/statistics and does not clearly state the source/date/nature of the information. An example is Berkhamsted, the DLP has statements where the population data sometimes is Berkhamsted only, sometimes includes Northchurch, sometimes 2011 census and sometimes 2015/2017/2019. There is no clear base figure that is being worked to, so it is not easy to understand the potential impact.</p>

QUESTION: Evidence Base comment	<p>Pigeon Hemel Hempstead Ltd welcomes that DBC has identified infrastructure requirements for strategic locations within Appendix B of the Infrastructure Deliver Plan (IDP) (November 2020).</p> <p>Pigeon Hemel Hempstead Ltd note that the IDP is an evolving document, and therefore, in the next version of the IDP, Pigeon Hemel Hempstead Ltd recommends that further detail is added to the IDP to ensure that the Plan is found sound. At present, the IDP does not include funding mechanisms for some of the infrastructure interventions required to deliver the North and East of Hemel Hempstead Growth Areas. Deliverability needs to be a key focus of the ongoing work in connection with HGC.</p> <p>It will be important that the necessary level of detail is developed as part of the HGC Framework Plan, which will provide a spatial framework and infrastructure provision for North and East of Hemel Hempstead Growth Areas. The HGC Framework Plan is being prepared by The Crown Estate, Bloor, Pigeon and Kitewood, HGC Programme Team, DBC, SADC and Hertfordshire County Council (HCC)).</p> <p>The HGC Framework Plan will include the preparation of an Infrastructure Framework that will identify phasing & funding sources for infrastructure (e.g. S106, CIL, external funding bodies, development cost). This will therefore be an important part of the evidence base in demonstrating the deliverability and soundness of the HGC Growth Area allocations and DBC should work towards and utilise this level of detail for all infrastructure interventions in the next version of the IDP to demonstrate that the infrastructure (and the Plan) is deliverable.</p>

QUESTION: Evidence Base comment	<p>Dacorum's target of 922 dwellings is based on out-of-date projections carried out in 2014. Subsequent household projections in 2016 and 2018, by the Office for National Statistics (ONS), have been much lower, with significant declines in London, the South East, and the East of England. For example, in 2014 the ONS projected growth, over 25 years, at 23.1%. In 2016 this projection fell to 17.3%, and in 2018 it fell to 16.2%. Within these projections, increases in the East Midlands, North East, North West, and South West were balanced by significant declines in London, the South East, and the East of England.</p> <p>In Dacorum, the reduced projections led to a fall in the annual requirement for dwellings from 922 in 2014 to 430 in 2018. The trend for working from home rather than commuting to an office, has further reduced the demand for dwellings near train stations within commuting range of London. Future projections for housing requirements in Dacorum are likely to be even lower. So, Dacorum's Local Plan is based on projections that are out of date and that do not reflect current demand.</p> <p>Other planning authorities have declined to use these outdated projections. For example, in October 2020, Buckinghamshire Councillors voted to withdraw their Local Plan and are working on a revised plan to "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law". Dacorum's</p>

councillors should follow the example of their Buckinghamshire counterparts, withdraw their Local Plan, and produce a new plan based on current projections.

QUESTION: Evidence Base comment

I consider the council ' s Green Belt assessment as not up to date. The two stage review process of 2016 and 2017 pre-dates the 2019 Framework; which is sought to be justified by the council with their internal 2020 review. The council ' s assessment of Green Belt land within the Borough identifies substantial variances in the character, appearance and contribution of the Green Belt across it, and yet the allocation of land to suit local need requirements is arbitrability done, with no reflection of the individual characteristics of the land reflective in the policies attributed to their allocation.

This is consistent with the approach to assessment of the Green Belt, wherein the council have attempted to justify use of outdated assessments in their 2020 review. But the review does not assess sites against the 2019 NPPF, simply seeking to show how compliant it could be with it. Heavy reliance in the review is placed on demonstrating exceptional circumstances have been met by reference to case law. However, in each case referenced, the housing need calculation is established and not in doubt. Paragraph 137 of the Framework cannot be met with this review, as it has not been proven that 5,945 homes need to be built in the Green Belt.

QUESTION: Evidence Base comment	This is a 25% increase over the current housing stock. These Central Government imposed growth figures are not substantiated by evidence and are based upon outdated ONS projections. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% fewer than this plan projects - and falling birth rates and the decline in immigration following Brexit will no doubt continue to decrease this projection.

QUESTION: Evidence Base comment	<p>SUMMARY</p> <p>Whilst we consider many aspects of the plan to be sound we have identified issues with some of the policies and site allocations which do compromise the overall soundness of the plan. Under paragraph 35 of the National Planning Policy Framework ('The Framework') some aspects of this Plan are unsound as they're not justified, effective, or consistent with national policy. We have identified in detail below where we find the Plan unsound and what measures are needed to make the Plan sound. We hope that you find the following comments helpful.</p> <p><u>Evidence Base for Growth Areas</u></p> <p>The identification of potential sites for development within a Local Plan is an important step in establishing where change and growth will happen across a local authority area, as well as the type of development and when it should occur. It is important that the sites that are selected as allocations are based on an understanding of their potential impact upon the historic environment. A number of the Council's proposed sites have the potential to impact on heritage assets.</p> <p>In order to help refine which growth allocations to take forward, we would suggest that a Heritage Impact Assessment (HIA) is undertaken of each of the sites identified in the following section. We would refer you to our Advice Note 3 'The Historic Environment and Site Allocations in Local Plans.</p> <p>All sites discussed below will need to be appraised against potential historic environment impacts. It is imperative to have this robust evidence base in place to ensure the soundness of the Plan. We recommend that the appraisal approach should avoid merely limiting assessment of impact on a heritage asset to its distance from, or intervisibility with, a potential site. Site allocations which include a heritage asset (for example a site within a Conservation Area) may offer opportunities for enhancement and tackling heritage at risk, while conversely, an allocation at a considerable distance away from a heritage asset may cause harm to its significance, rendering the site unsuitable. Cumulative effects of site options on the historic environment should be considered too.</p> <p>The following broad steps might be of assistance in terms of assessing sites:</p> <ul style="list-style-type: none"> • Identify the heritage assets on or within the vicinity of the potential site allocation at an appropriate scale;

- Assess the contribution of the site to the significance of heritage assets on or within its vicinity;
- Identify the potential impacts of development upon the significance of heritage asset;
- Consider how any harm might be removed or reduced, including reasonable alternatives sites;
- Consider how any enhancements could be achieved and maximised; and
- Consider and set out the public benefits where harm cannot be removed or reduced

The HIAs should assess the suitability of each area for development and the impact on the historic environment. Should the HIA conclude that development in the area could be acceptable and the site be allocated, the findings of the HIA should inform the Local Plan policy including development criteria and a strategy diagram which expresses the development criteria in diagrammatic form.

QUESTION: Evidence Base comment

This section of the representations Report considers the Council’s evidence base in terms of the wider site selection process in relation to the assessment of the proposed allocation at Grange Farm and the assessment of reasonable alternatives. Taken together, the representations seek to reinforce the proposed allocation at Grange Farm as essential to deliver a sound Local Plan and strategy for Bovingdon that is effective, justified and positively prepared.

The Site Selection Process

This section of the representations considers the Council’s site selection process, including the outputs of the Council’s Site Selection Topic Paper and related findings within the evidence base, including the Sustainability Appraisal. These representations support the overall conclusion at Table 17 of the Site Selection Topic Paper regarding ‘Key Developments in Bovingdon’, which identifies proposed allocation Bv01: Grange Farm.

Notwithstanding this, the explanatory text in paragraphs 6.19 and 6.20 of the Background Paper does not, we argue, fully reflect the potential for exceptional circumstances to be demonstrated for the amendment of Green Belt boundaries at Grange Paragraph 6.19 in-particular effectively limits justification for the smaller-scale of growth selected to the conclusion of ‘constrained’ limits to development at the settlement.

Presentation of the findings following site selection in this context is not consistent with the Council’s own explanation of how recommendations were reached at paragraphs 8 to 6.10 of the Topic Paper.

This includes considering the potential for settlements to “**deliver new infrastructure to serve existing and future communities**” and “**accelerate housing delivery**” consistent with the timely delivery of requirements to accommodate future growth and maximise opportunities for sustainable transport. All of these aims are demonstrably satisfied by the proposed allocation at Grange Farm.

Presenting the outcomes of the site-selection process for specific options on the same basis is necessary to ensure consistency with national policy and guidance for plan-making. The PPG states:

*“Authorities preparing local plans should **assess future needs and opportunities** for their area, explore **and identify options for addressing these**, and then set out a preferred approach” (ID: 61-034-20190315) (our emphasis).*

By extension, this means that the Council’s conclusions should be reinforced to fully demonstrate that the allocation of Grange Farm is required to achieve a sound Plan as part of Bovingdon’s contribution to a wider spatial strategy that is positively prepared, effective and deliverable.

The commentary at Appendix B of the Site Selection Topic Paper (which addresses the Council’s summary and recommendations for allocation) provides a more comprehensive basis to assess the proposed strategy for Bovingdon, as part of standalone conclusions for the Grange Farm site:

*“**Officer Recommendation for New Local Plan:** Site is proposed for an allocation of around 150 dwellings with public open space, and sufficient land should be safeguarded for a new three form-entry primary school.*

Site performs well on a number of identified constraints, many of which are likely to be sufficiently mitigated through development. Development of the site would assist in the delivery of new drainage infrastructure that would address

known surface water flooding issues for existing communities in the area. This will be implemented as part of a new public park which to serve the wider village. Having regard to the above and other alternative sites in Bovingdon, on balance officers consider that Grange Farm is the most sustainable option, bringing a number of benefits for Bovingdon as well as meeting the wider strategy of the Local Plan. Officers therefore recommend its allocation in the new Local Plan.”

For the avoidance of doubt it is the position of these representations that any identified constraints can be sufficiently mitigated to support the Council’s reasons for site selection and conclusions regarding the potential for exceptional circumstances to be demonstrated.

It is also clear that the Officer recommendation and summary need to be read together to ensure that the Council’s reasons for selecting the proposed allocation at Grange Farm fully align with the proposed Delivery Strategy for Bovingdon. It is our contention that the Council’s site-specific reasons nonetheless do not yet recognise all components of the strategy towards which Grange Farm contributes.

This notably relates to paragraphs 23.192 to 23.194 of the supporting text of the Emerging Strategy for Growth, which these representations support in terms of the role of the Grange Farm in enabling potential regeneration of the High Street.

The draft Local Plan confirms that the potential relocation of Bovingdon Primary Academy School is central to a variety of objectives (including highways, open space and community facilities components) that have been subject to engagement with the Parish Council and County Council.

Selection of the proposed allocation at Grange Farm is a prerequisite to achieving these potential benefits of sustainable development given that it is the only potential option assessed via the site selection process as demonstrating the ability and willingness to safeguard land for a new school.

Comparison of Assessment Findings – Proposed Grange Farm Allocation

When the evidence for Grange Farm is considered against other reasonable alternatives assessed as part of the site selection process it is clear that reinforcing and supplementing the Council’s reasons for site selection would be justified.

The starting point for this is the Council’s Sustainability Appraisal of proposed Policy SP27 regarding the Delivery Strategy for Bovingdon. This identifies no potential significant adverse effects against the Plan’s objectives.

Section 6.2 of the main SA Report states that the assessment of policies has been undertaken without regard to potential mitigation or enhancement measures. However, the assessment findings for each settlement are clearly contingent on the outcomes of site selection. For Bovingdon this is identified by the findings under objectives 10, 11, 12, 14 and 15; each of which can only be achieved as a result of the proposed allocations and delivery of site Bv01: Grange Farm.

Table 3 below compares the assessment findings against the Sustainability Appraisal objectives for Policy SP27 (Bovingdon Delivery Strategy) and Site Bv01: Grange Farm.

Read together with paragraphs 6.19 and 6.20 of the Site Selection Topic Paper, it is clear that the Council’s reasons for setting out the selected strategy for Bovingdon should go significantly further to recognise that the potential benefits for

sustainable development could not be achieved without supporting the minimum level of growth proposed and would specifically not be achieved without support for the proposed allocation at Grange Farm.

It is noted that the Sustainability Appraisal Report does not provide a clear definition of the reasons that the assessment of effects may be associated with significant positive outcomes. No criteria are given to clearly indicate the circumstances in which this outcome may be identified. It is apparent from Table 6.1 of the Main Report that no significant positive effects are identified in the Delivery Strategy for any of the Large Villages at Bovingdon, Markyate or Kings Langley.

However, the potential Delivery Strategy for Bovingdon can be clearly distinguished on the basis that the selected strategy, including the proposed allocation of Grange Farm, incorporates a number of benefits to the wider community including safeguarding land to meet future requirements for growth and enable regeneration of the High Street, which is not the case at either Markyate or Kings Langley. There are other examples in the Sustainability Appraisal where the provision of additional mixed-use employment floorspace is accorded the potential for **significant positive effects**. It is considered that where the Delivery Strategy, contingent on allocation of the Grange Farm site, supports similar objectives in relation to **community cohesion (objective 12)** and **sustainable prosperity (objective 14)** the assessment findings should be revisited to recognise the potential of substantial benefits to sustainable development.

The ongoing contributions of the proposed Grange Farm allocation to sustaining and enhancing opportunities for economic development include, but are not limited to, retention of existing employment uses on site and new employment-generating associated with the delivery of specialist elderly housing and relocation and expansion of the Primary School.

Table 3: Comparison of Sustainability Appraisal Findings – Proposed Grange Farm Allocation

Sustainability Appraisal Objective

Assessment of Policy SP27: Delivering Growth in Bovingdon

Assessment of Site Bv01: Grange Farm

DLP Notes

Biodiversity

Uncertain

Adverse

Assessment of the Delivery Strategy notes that selection of the proposed Grange Farm allocation will not result in significant adverse effects for biodiversity. It is confirmed that

new TPOs within the site would be retained as part of any future development together with retention and enhancement of boundary planting.

Water

No predicted effects

Uncertain

See below.

Flood Risk

No predicted effects

Uncertain

SA of site BV01 notes proposals include delivering alleviation measures which could deliver wider benefits for existing residents and wider village.

Both assessments should be reassigned Positive Effects.

Climate Change

No predicted effects

Positive

SA of site BV01 recognises accessible location with potential to decrease the need to travel by car, reduce growth in airborne emissions and provide additional benefits associated with increased walking and cycling, including positive impacts on high street pollution and congestion.

Delivery Strategy assessment should be reassigned Positive Effects

Air Quality

No predicted effects

Positive

SA of site BV01 recognises accessible location with potential to decrease the need to travel by car and provide additional benefits associated with increased walking and cycling and would have positive impacts on congestion within the High Street.

Delivery Strategy assessment should be reassigned Positive Effects.

Soils

Adverse

Significant Adverse

SA of the Delivery Strategy notes that the bulk of planned growth will be met on greenfield sites, with potential to ensure that loss of Grade 2 soils is minimised e.g. sealing open space

See Section 5.5 of the main SA Report ('Council's reasoning for the preferred strategy'). This notes that much of the land south, west and east of the settlement comprises Grade 2 agricultural land but recognises that the Grange Farm sites provides additional

sustainability benefits including flood alleviation and additional open space Assessment of Site Effects should be reduced to Adverse/Uncertain

Resource Efficiency

No predicted effects

Uncertain

Site is located within the Brick Clay Mineral Safeguarding Area.

Historic Environment

No predicted effects

Uncertain

The Site Selection Topic Paper notes, in relation to White Hart Cottage (Grade II Listed) in proximity to NW corner of the site:

“The retention of [these] trees and possible further landscaping should ensure the setting of the listed building is respected and maintained.”

Assessment of Site Effects should be reduced to No Predicted Effects

Landscape/Townscape

Adverse

Adverse

See LDA Design Report (November 2020), which concludes that the landscape sensitivity of parcel BV-A6 should be rated as Low. It is considered, following the findings of the Stage 3 Green Belt Review, that amendment of Green Belt boundaries west of the settlement would compare more favourably than other site options given the self-containment of the site and scope to provide clearly identifiable and defensible alternative Green Belt boundaries.

Both assessments should be reassigned Uncertain or No Predicted Effects

Health and Wellbeing

Positive

Positive

Both assessments recognise improved walking and cycling links, sustainable location and delivery of new open space

Sustainable Location

Positive

Positive

SA of Delivery Strategy refers to additional benefits of potential High Street Regeneration

Community Cohesion

Positive

Positive

Both assessments recognise benefits of provision of land for a new school. Both assessments should be reassigned Significant Positive Effects

Housing

Positive

Positive

SA of site BV01 assess potential effects based on a capacity of 250 homes.

SA of site also notes potential additional benefit through provision of specialist elderly housing

Sustainable Prosperity

Positive

Positive

Assessment of Delivery Strategy notes that this includes provision to maintain the shopping and service role of the village with additional employment opportunities from enabling new development at the High Street and from the proposed nursing home.

Both assessments should be reassigned Significant Positive Effects

Employment and Skills

Positive

Positive

Assessment of the Delivery Strategy notes the development of a new 3FE Primary School together with enabling development at the High Street would further local objectives for job creation.

It should also be noted that the indicative Grange Farm Masterplan proposals enable retention of existing commercial uses within the site.

Both assessments should be reassigned Significant Positive Effects

There are, however, apparent inconsistencies between the assessment of policies and sites in the Sustainability Appraisal. Specifically, the assessment of policy SP27 records no strategy-specific predicted effects for objectives 2 to This is despite the specific assessment for the Grange Fam having identified positive effects for climate change and air quality due to the accessible location of the site, proximity to the village centre and delivery of new local facilities with enhanced walking and cycling links.

The site-specific assessment also notes 'uncertain' potential effects in relation to Flood Risk. However, for the reasons given in the SA, supported by these representations it is considered that this objective should be assigned at least a positive classification. This is because the proposals include delivering alleviation measures which could deliver wider benefits for existing residents. These improvements have been incorporated at all stage of preparing indicative masterplan proposals for the site and are capable of being secured via appropriately worded policy criteria for site BV01. They have also been scrutinised by HCC drainage experts and found acceptable.

Importantly, the Sustainability Appraisal should also recognise the implications of the 'do nothing' scenario at Bovingdon which would identify potential negative effects as a result of not addressing existing surface water drainage issues affecting the wider settlement. The same potential negative effects would also arise if the proposed strategy was altered to select any of the other alternatives in the settlement considered as part of the site selection process, as they cannot intercept and disperse the floodwater flows, owing to their location at the opposite side of the village

Site Assessment Findings for Grange Farm and Reasonable Alternatives

The Site Selection Topic Paper also sets out reasons provided by Officers not to support the proposed allocation of other reasonable alternatives considered as part of the site selection process. The Topic Paper confirms that these reasons take account of the findings within the wider evidence base. For the avoidance of doubt these representations support the overall basis for reasons presented under the detailed assessments for each alternative site in Bovingdon at Appendix B of the Site Selection Topic Paper.

Table 4 provides an overview and evaluation of findings for each of the six greenfield sites in Bovingdon (excluding Bovingdon Airfield) carried forward for detailed assessment (as identified at A15 of Appendix A to the Site Selection Topic Paper). The purpose of the Table is to demonstrate that, even when the potential requirements of the overall Delivery Strategy are treated separately, the proposed Grange Farm allocation performs favourably at a site-specific level when compared with the other alternatives assessed.

Table 4 also takes account of Appendix F of the Council's Sustainability Appraisal, which provides a useful starting point in setting out specific reasons for the non-inclusion of sites in the draft Local Plan following detailed assessment.

In terms of the site assessment process and the evaluation of potential outcomes for site- selection we would also note reservations regarding the comparative level of information available to support the site options assessed. Specifically, the DBC Site Assessment appears to provide an assessment of the capacity for development based on gross and net site areas only, to calculate total potential residential capacities within the net developable. The AECOM assessed capacity of Grange Farm for 252 units is an illustration of this.

Importantly, the site-selection findings for Grange Farm reflect its proposed allocation for development, to provide for a moderated total of 150 dwellings (no longer 252 dwellings) together with the other requirements of the Delivery Strategy. Moreover, the Grange Farm site has previously been subject to extensive pre-application discussions demonstrating that the site is unconstrained by any relevant legal or technical constraints to development in terms of (for example) access, highways and drainage.

The context is substantially different for the other options assessed - potential legal and technical constraints to development may further affect the feasibility of development and comprise a material consideration, should any further detailed testing be required. The following points are highlighted:

- No detailed testing of highways matters is referred to in the assessment for Site Refs 39 (Homefield) and 34 (Fox Meadow), notwithstanding the noted highway safety. The site assessment process does not contemplate the likely implications for development potential associated with available highway capacity. This includes acceptable outcomes for components such as sight lines, junction design, non-residential traffic volumes (e.g., Bovingdon Football Club) and vehicle speeds at this part of the highways network as referred to in the assessment findings. No evidence is presented to support the assessed combined site capacity of 136 units.
- The site assessment findings for Site Refs 39 (Homefield) and 34 (Fox Meadow) refer only to the technical feasibility of access. No consideration appears to have been given to and land ownership of legal restrictions including the potential for restrictive covenants to affect access options.
- The site assessment findings are not sufficiently detailed to identify likely impacts on development potential for site options that would require substantial mitigation in terms of their shape and internal layout. The assessment of Site Ref 33 (Duckhall Farm) notes the irregular shape and separation into two narrow arable fields. In practice the mature tree belt dividing these parcels would require extensive root protection measures and further assessment of the impact on Listed Buildings and their. The internal configuration is likely to be a factor behind previous options identifying a substantially lower capacity on only part of the site area.

These representations express some concern that the presentation of conclusions does not necessarily take account of a wider view on the potential for exceptional circumstances to be demonstrated, in terms of the consequences for sustainable development, should any alternative locations for growth be supported.

To a significant extent these observations reflect the Council's assessment of the proposed Delivery Strategy at Bovingdon, which clearly reflects that support for the Grange Farm site is a prerequisite for delivery of the wider benefits identified. The Grange Farm site would remain necessary to deliver those wider benefits even if a higher overall level of development in Bovingdon was supported as part of the selected spatial distribution option. It is important to assess whether this conclusion is consistently reflected across the Council's evidence base.

These representations also consider the extent to which the specific findings of the Council's evidence base support an objective and comparative assessment of individual sites. This is important in order to ensure that conclusions on standalone criteria such as the potential level of Green Belt harm can be properly taken into account, when weighing the potential for exceptional circumstances to be demonstrated on any individual site; together with recognising how the Council's assessment of wider strategy options informs the selected approach in terms of overall levels of growth.

It is clear from the findings of Table 4 that the site-specific outcomes of the assessment process cannot be readily separated from the overall requirements of sustainable growth and the Delivery Strategy for Bovingdon. The Council's Site Selection Topic Paper (Appendix B) places significant weight on the potential provision for new public/community facilities. This element of the weighting exercise on the potential for exceptional circumstances to be demonstrated is fully supported.

Rejection of Reasonable Alternatives Identified with Major Constraints (Sites 33, 34, 41 and 42)

Notwithstanding the total number of six sites taken forward, only two of the identified options (Site Bv01: Grange Farm and Site 39: Homefield) do not have major identified constraints to development. In each of these instances the site options with major constraints are also not considered candidates for delivery of new community infrastructure. These options cannot be considered reasonable alternatives for the purpose of achieving the requirements of the Delivery Strategy identified, without which growth in Bovingdon would not be sustainable or sound.

The observations in Table 4 also demonstrate that significant weight needs to be accorded to the identified site constraints, both individually and cumulatively. Sites 33, 34, 41 and 42, even if considered together, would achieve a lower quantum of development than can be appropriately and sustainably accommodated at the proposed Grange Farm allocation with a quantum of 150 homes. The potential constraints to these alternative site options are more significant than identified at Grange Farm, with limited identified opportunities for mitigation.

Irrespective of the detailed assessment undertaken in the Council's evidence base, these representations conclude that there is no justification to support the potential for exceptional circumstances being demonstrated for the other site options, either individually or collectively, given the substantial shortcomings against satisfying requirements for sustainable development, including the proposed Delivery Strategy for Bovingdon. In this respect, these options perform substantially less favourably than the Grange Farm site.

The proposed Grange Farm site allocation demonstrates how, what should be considered the minimum proportionate level of growth at Bovingdon, can be sustainably delivered as part of a sound spatial distribution option, while also fulfilling the requirements of the Delivery Without prejudice to any future plan-making activities by the Council, these four rejected site options (under Site References 33, 34, 41 and 42) could only reasonably be considered in addition to the favourable option at Grange Farm.

Rejection of Proposed Site Reference 39: Homefield

Only Site Reference 39 (Homefield) is also taken forward for detailed consideration, together with Grange Farm, on the basis of minor potential constraints following detailed site Site 39 is also accorded potential for the delivery of additional community facilities.

For the avoidance of doubt, these representations support the view that there is no basis for conclusions to support the potential for exceptional circumstances to be demonstrated to support selection of Site 39 as favourable to the proposed allocation at Grange Farm. This assessment outcome should be reinforced in the Council's evidence base for the following reasons.

Firstly, Volume 3 of the Council's Site Assessment Study prepared by AECOM identifies a maximum gross capacity for the Homefield site of 112 units, which the Site Selection Topic Paper would be negatively affected by any inclusion of new community facilities. This is materially different to the assessment of the Grange Farm site, which has been consistently assessed as suitable with a gross capacity for around 250 dwellings as identified in the DBC Site Assessment Study and discussed directly with the Council as part of stakeholder engagement, prior to selection of the preferred approach and proposed allocation for 150 dwellings and land for a 3FE Primary School.

The capacity for development at the Homefield site is too low to contribute to a sound spatial distribution option, taking account of the requirements of the Delivery Strategy as it is only five hectares in area and would therefore be unable to

accommodate a three hectare school site. Selection of the Homefield site does not comprise a reasonable alternative to development at Grange Farm.

These representations support the Council's proposed spatial strategy and conclude that provision of a minimum 240 net additional dwellings over the plan period as itself a key component of providing proportionate growth in the Large Village of Bovingdon. Notwithstanding the potential for any higher capacity for growth it is clear that on a comparative basis with Grange Farm, the Homefield site can accommodate substantially less than this level of growth.

The Sustainability Appraisal findings for the Homefield site under objective 13 (housing) should be accorded uncertain or reduced positive effects as a result. Incorporating community facilities at the Homefield site, if at all feasible, would substantially reduce the effectiveness and overall benefits of the proposed Delivery Strategy at Bovingdon. Achieving the minimum quantum of residential development required, together with the requirements of the Delivery Strategy, would require the release of at least one other Green Belt site. The proposed Grange Farm allocation can meet all such requirements through the amendment of Green Belt boundaries on a single site and one that results in less impact on the Green Belt.

Bearing that in mind, the Council has not considered site selection options at Bovingdon comprising selection of the Homefield site and other rejected site options (with major identified constraints) that would be necessary to achieve the minimum proportionate level of growth identified as part of a sound spatial distribution option. It is axiomatic that any such combination of sites, if considered, would result in cumulative levels of Green Belt harm and potential adverse effects than the Homefield site, considered in isolation or when considered against the greater capacity for development on the self-contained Grange Farm site.

Thirdly, reasons for rejecting the potential allocation of the Homefield site in the Site Assessment Topic Paper and Sustainability Appraisal focus on highway safety and parking issues. However, it is clear that considered as part of the overall weighting exercise these reasons reflect that the Homefield site fall significantly short of addressing the overall requirements for the Delivery Strategy.

The Sustainability Appraisal records potential positive effects for objectives 4 and 5 (Climate Change and Air Quality) and objectives 10 and 11 (Health and Wellbeing and Sustainable Location). This is the same assessment outcome as the Grange Farm site. We disagree with each of these findings. The potential effects of the Homefield site should be reduced to **Uncertain**. The Site Selection Topic Paper recognises that:

*“Development is likely to have an impact on the local road network at peak periods, including, **Green Lane, High Street and Chipperfield Road.**”*

The Site Selection Topic Paper findings for Grange Farm do not identify potential additional impacts on the High Street. As it is at the opposite end of the village, beneficial effects of Grange Farm should in-fact be noted in terms of the potential to reduce pressure on the High Street associated with the potential relocation of the Primary School. The site potential benefits, including relieving existing pressure, would not and cannot be achieved by the Homefield, site based on the comparative site assessment findings. The Council's reasons for not selecting the site should recognise these constraints to providing for the wider Delivery Strategy.

Finally, the site assessment findings for the Homefield site are based on the strictly defined small-scale sub-area DA-SS2. The AECOM Site Assessment Study notes that its conclusions are predicated on assessing a single field of pasture and that the potential for readily identifiable and defensible Green Belt boundaries is contingent upon utilising existing hedgerows.

The Green Belt and Landscape Sensitivity Assessment (LDA Design, November 2020) prepared on behalf of our client disputes the strength of these findings when future requirements for sustainable development are considered with the Grange Farm site on a comparative basis. In relation to reviewing the findings of the Green Belt Assessment section 6.1 of the Report states:

*“our assessment notes that the hedgerow along the south-eastern boundary of Homefield/Fox Meadow would not be as strong a long-term Green Belt boundary as the roads that surround Grange Farm, together with their substantial roadside hedgerows. The GBR states on page 113 that the field boundaries in the northern part of BV-A5 could be strengthened to form a robust new boundary for the Green Belt, and that the hedgerows on the outer edge of D-SS2 ‘would provide a durable and defensible new boundary for the Green Belt’. However, in the assessment of D-SS2 on pages 61-62 in Annex Report 1, the GBR states ‘**the durability and permanence of this field boundary is questionable as a potential Green Belt boundary**’. This supports our view that release of the Grange Farm site would provide a stronger long-term Green Belt boundary.”*

Section 2 of the Report, regarding the findings of the Council’s Landscape Sensitivity assessment states:

*“Parcel (BV-A5) is judged to be within the ‘more degraded/eroded settlement fringe influenced landscape ...[with] a lower (moderate to low) landscape sensitivity’. However, the sensitivity rating summary continues that ‘**the intact hedgerow pattern and small- scale field network throughout the parcel are sensitive to development by virtue of the potential impact this could have on their integrity as landscape elements**’. Fox Meadow meets this definition being a small-scale field with an intact and mature hedgerow enclosure, therefore it could be considered that Fox Meadow is erring more to Moderate sensitivity than Low.”*

Additionally, the assessment (as also stated in the Council’s own AECOM Site Assessment findings) notes that potential visual impact and the sensitivity of the Fox Meadow/Homefield sites could be increased by the proximity of the Chiltern Way long distance recreational trail which passes the southeastern boundary of the site.

The conclusions of the LDA Report therefore state that attributing the Fox Meadow/Homefield sites a lower landscape sensitivity than Grange Farm is unjustified; and that the Grange Farm site, if allocated would, provide for a stronger long-term boundary. In terms of the potential for comparative assessment of potential impact on the Green Belt the LDA Report states:

“the assessment notes that realigning the Green Belt around the outer edge of the Grange Farm site would provide a stronger and more defensible long-term Green Belt boundary than would a realignment along the southeastern edge of Homefield/Fox Meadow, which has the potential to result in further encroachment on the wider Green Belt countryside in the future.”

A copy of the main extracts from the LDA Report are included at Appendix 4. A copy has already been submitted to the Council and can be reprovided upon request.

The Site Selection Topic Paper does not consider the potential impact on the strength of Green Belt boundaries when considering the overall requirements for development of Homefield and the Delivery Strategy. The potential impacts are likely to be exacerbated given the relatively limited capacity for residential development within the small-scale sub-area assessed, particularly if safeguarding land for new community facilities is considered. Based on the comparative gross site areas only 2 hectares would be left for housing and landscaping at Homefield following reservation of 3 hectares for a new 3FE Primary School, verses 7 hectares remaining at Grange Farm.

Moreover, the provision of any additional open space or compensatory measures to offset the proposed amendment of Green Belt boundaries would need to respect the relatively weaker boundaries identified.

The Grange Farm site can achieve enhancement of recreational opportunities and connections to the wider countryside (including the Nature Reserve to the west, and Bovingdon Green to the South) within the context of strong, new and defensible Green Belt boundaries defined by Green Lane/Chesham Road. As part of promoting the site throughout the Local Plan process the Council was provided with a statement of Potential Green Belt Compensatory Measures (May 2020). These reflect the potential for qualitative off-site enhancements to the Brickworks Nature Reserve and Bovingdon Green, both located and adjacent to the site together, with maximising the benefits to recreation and biodiversity enhancement as part of on-site provision. The representations would support strengthening the delivery of these measures through appropriately worded policy criteria and incorporation within the IDP, where adequately justified and costed.

Achieving the same outcome on the Homefield/Fox Meadow site would potentially lead to a requirement to further alter relatively weaker boundaries comprising existing hedgerows. When these factors are considered separately as part of the site selection process it is clear that negative weight should be attributed to the potential for exceptional circumstances to be demonstrated for the Homefield site. Both these sites do not provide any publically accessible open space adjacent to them, unlike Grange Farm.

Whiteacre highlights some inconsistencies between the assessment of policies and sites in the Sustainability Appraisal. Specifically, the assessment of **Policy SP27** records no strategy-specific predicted effects for Sustainability Appraisal objectives 2 to 5. This is despite the specific assessment for the Grange Farm having identified positive effects for climate change and air quality due to the accessible location of the site, proximity to the village centre and delivery of new local facilities with enhanced walking and cycling links.

The site-specific assessment also notes 'uncertain' potential effects in relation to Flood Risk. However, for the reasons given in the SA, supported by these representations it is considered that this objective should be assigned at least a positive classification. This is because the proposals include delivering flood alleviation measures which could deliver wider benefits for existing residents.

These representations support the Council's proposed spatial strategy and conclude that provision of a minimum 241 net additional dwellings over the plan period as a key component of providing proportionate growth in the Large Village of Bovingdon. Notwithstanding the potential for any higher capacity for growth, it is clear that on a comparative basis with Grange Farm, the Homefield site can accommodate substantially less than this level of growth and that only the Grange Farm site can accommodate the other requirements of the Delivery Strategy. These include safeguarding land for a new 3FE Primary School and enabling potential regeneration of the High Street.

QUESTION: Evidence Base comment

THE CHILTERNES AREA OF OUTSTANDING NATURAL BEAUTY (AONB)

- Berkhamsted and Tring are set firmly within the Chilterns AONB with Green Belt acting as a soft edge and buffer between urban and natural environments. The Green Belt surrounding them is essential to the setting of the AONB and informs both the settlements themselves and the AONB. Green Belt and AONB are intrinsically interwoven, thus diminishing the Green Belt diminishes the In particular, the Green Belt on Tring's Eastern edge affords public access to and outstanding views to/from the AONB which would be lost if any of those sites were developed.
- As the Chilterns Conservation Board (CCB) is the statutory authority for the protection of the Chilterns AONB, its policies and position statements are highly relevant. The Board's paper: '*Development affecting the setting of the Chilterns Area of Outstanding Natural Beauty*' (CCB website) is pertinent to this Consultation and the proposals therein.
- Local authorities have statutory obligations set out in section 85 of the Countryside and Rights of Way Act 2000 '*to be mindful of both the possible positive and negative impacts of a development **within the setting of the AONB** on the natural beauty and special qualities of the AONB when determining planning ' (ref. CCB paper point 13). Quite clearly with this Plan, DBC fails to fulfil those obligations.*

- It is the Group's considered view that insufficient weight and assessment has been given by the LP to those impacts and obligations. The LP Interim Sustainability Appraisal (non-technical summary) provides assessment criteria and then assesses these against options A-E if developed. (p6-9)

We do not accept the assessments for options A, C-E as accurately reflecting the true impact on (a) landscape (b) historic environment and (c) sustainable locations. Whilst we accept that *'effects will be very dependent upon the location and characteristics of the site'* we do not accept that developments of the Green Belt sites in Tring and Berkhamsted which are included in those options would be *'unsustainable'* with only *'minor adverse impacts on the SA objectives'*.

It is the Group's considered view that the Green Belt sites located in Tring and Berkhamsted identified in the LP would suffer the highest level of adverse impact and should therefore be assessed as *'very unsustainable'* with *'significant adverse impacts on the SA objectives'*.

We question whether the consultants employed for the Sustainability Assessment have actually visited these sites, or indeed whether Councillors representing areas other than Tring or Berkhamsted have done so. These are large swathes of significant green, tranquil and natural landscape, which informs the setting of the Chilterns AONB, a local and national high quality public asset, which any development of those sites would permanently destroy.

The CCG does not accept the statement that for these sites: *'new large greenfield developments could provide opportunities for biodiversity enhancements and make use of district heating systems'*. The sites in question already have significant biodiversity which we believe would be challenging to *'enhance'*.

Assessment of the sites in the *'Sustainability Assessment Working Note'*, DBC Consultation December 2017, does acknowledge the AONB and cumulative effects such as increased traffic, air and noise pollution caused by potential expansion of London Luton and Heathrow airports.

However, the CCG does not find the assessment outcome of these in the LP 2020 to be balanced in terms of negative/positive impact. The visual impact of aircraft and their contrails is not identified.

- The CCG does not accept the LP's assessment (*Appraisal of Sustainability p9*) of landscape sensitivity for Options C-E. The proximity of these sites to the AONB makes each significant in negative impact to the landscape should they be

- CCB's paper further states (CCB point 14): *'The setting of the Chilterns AONB does not have a geographical border. The location, scale, materials or design of a proposed development or land management activity will determine whether it affects the natural beauty and special qualities of the A very large development may have an impact even if some considerable distance from the AONB boundary.'*

The scale of the proposed sites for Tring and Berkhamsted would have grave and permanent negative impact on the AONB and on the quality of life for residents and tourists in this part of the Chiltern Hills.

- The CCB (point 15) gives examples of adverse impact upon the setting of the These include:
- *Blocking or interference of views out of the AONB particularly from public viewpoints or rights of way*
 - *Blocking or interference of views of the AONB from public viewpoints or rights of way outside the AONB*
 - *The visual intrusion caused by the introduction of new transport corridors, in particular roads and railways*
 - *Loss of tranquility through the introduction of lighting, noise or traffic movement*
 - *Introduction of significant or abrupt changes to landscape character particularly where they are originally of a similar character to the AONB*
 - *Change of use of land that is of sufficient scale to cause harm to landscape character*
 - *Loss of biodiversity, particularly in connection with those habitats or species of importance to the AONB*
 - *Loss of features of historic interest, particularly if these are contiguous with the AONB*
 - *Reduction in public access and detrimental impacts on the character and appearance of rural roads and lanes*
 - *Increase in air or water*

The CCG strongly supports the position of the CCB in its description of these. We find that all sites within the LP which require release of Green Belt will, at least to some degree, cause these adverse impacts upon the AONB's setting, and thus the AONB itself.

- The CCB's policy HE4 states: *'The conservation of the historic environment (including the setting of important sites and features) should be based on best practice'*. The conservation of the historic environment eg. views to and from Ivinghoe Beacon, the Grand Union Canal, Tring Park, Ashridge, the Chiltern Beech Woods, Pendley Manor and specific archaeological sites in Berkhamsted, will all be challenged by the LP.

The LP Appraisal of Sustainability (B1.4) states there are: *'visitor pressures on Tring Park, Tring Reservoirs, the Grand Union Canal and Ashridge now. As urban population increases, pressures on access to countryside and these key attractions will increase'*.

The LP fails to offer any measures which would alleviate or offer alternatives to diminish, or at least contain, these pressures. Increasing housing in the Borough by nearly 20,000 over the next 18 years will serve only to increase pressure on these key natural resources which cannot be offset by a green play area or open space surrounded by high density housing.

2.ix. In 2019, the independent Glover Landscapes Review report recommended that the Chilterns AONB be designated a National Park, thus recognising the extremely valuable benefits which the AONB already contributes to the UK and its future potential. The Chilterns are significant in affording easy access to natural, unspoilt, tranquil and green landscapes, now widely recognised as of key value to mental and physical well-being for city dwellers.

It is the considered view of the CCG, that to permanently destroy large swathes of Green Belt sites abutting the Chilterns AONB, as the LP proposes, could negatively affect the possibility of National Park status. This would be of great regret for the nation, the area and its population.

QUESTION: Evidence Base comment

- The LP identifies there are ‘*uncertainties*’ (4.4.10) regarding pressure on existing services and unknown demand by an increased 4.4.11 states: ‘*It is unclear what infrastructure would be delivered to mitigate against negative effects in the absence of the Infrastructure Delivery Plan*’. With all due respect, we would have expected such a Plan, robust and well-researched, to be in place to inform sustainability and thus, choices of sites which could be developed. It would appear that sites have been chosen before any such essential studies are carried out.

Therefore, the CCG recommends that substantial and robust studies are carried out by DBC to inform decision-making on implementation of any, not just this, LP. This is particularly important for health, social care and education. Existing health service provision is already under strain and even for the lay person, it is relatively easy to see how these would not support the growth in population predicted under these proposals.

The CCG is concerned that whilst part of any planning consent for development of these large sites could require associated infrastructure provision and/or financial contributions from developers, historically, construction of such infrastructure lags behind development and occupation, thus putting pressure on existing resources for possibly many of the 18 year period of this Plan. Indeed, there is a risk, particularly with present economic uncertainties and unpredictability for the future, that developers could simply run out of money so key elements of infrastructure never gets built.

- The CCG is strongly against the release of any Green Belt in the Borough for housing development until all the requirements of the National Planning Policy Framework (NPPF) have been
- We find that DBC has failed to demonstrate ‘*the exceptional circumstances*’ which the NPPF requires before any Green Belt can be released for
- CCG does not find that DBC has fully explored all alternative options as required by Government and by the NPPF to avoid development of Green

QUESTION: Evidence Base comment	<ul style="list-style-type: none"> • Section 33A of the Planning and Compulsory Purchase Act 2004 requires that local planning authorities “engage constructively, actively and on an ongoing basis” in relation to strategic matters during the preparation of development plan • The ‘Duty to Co-operate’ as provided for in Section 110 of the Localism Act 2011 came into effect on 15 November. The duty was introduced under the 2011 Act to address the impact of the loss of “top-down” effect from the Regional Strategy and to offer a transparent way in which authorities should relate to one another on cross boundary issues. The duty is now shared between authorities requiring them to collaborate on cross-boundary matters and issues of sub-regional and regional importance, especially housing provision and infrastructure issues.

- The NPPF (Paras 24 - 27) is clear in directing LPA's as to the importance of the 'Duty to Co- Operate' and the proactive approach necessary to ensure a collaborative approach to reflect individual local plans. Para 26 states *'Effective and on-going joint working between strategic policy-making authorities and relevant bodies is integral to the production of a positively prepared and justified '*
- DBC's Housing Policy Topic Paper (November 2020) outlines that DBC have been working with nearby authorities and other organisations as part of the preparation of the Local Plan, with discussions focused on strategic matters that affect more than one authority and include unmet housing, as well as employment and infrastructure needs across the South West Herts authorities grouping (Dacorum, Albans, Watford, Three Rivers and Hertsmere).
- We note at paragraph 5.46 of the Topic Paper the intension to prepare Statements of Common Ground / Memoranda of Understanding which will serve as important evidence to robustly demonstrate that the Duty to Co-operate has been fulfilled in the plan making
- We consider that it is vital that statements clearly detail the position of neighbouring authorities in respect of assisting DBC in accommodating its full development Paragraph 5.47 of the Topic Paper sets out that assistance from nearby authorities in meeting needs has been sought; however, it is recognised that neighbouring authorities are also facing substantial growth challenges and, as such, have advised that they are unlikely to be able to assist DBC, particularly in the case of housing. In light of this, it is essential that DBC explore all opportunities to meet needs within its own boundaries.
- The emerging Dacorum Local Plan seeks to plan for growth across the Borough for the Plan Period 2020-2038.
- The NPPF (revised July 2018, revised again February 2019) brought into effect the new Standard Methodology for calculating OAN for Plans submitted after 24 January The national standard methodology for calculating local housing need (LHN) is now the main evidence for housing need for DBC. At the time which the consultation was publishes, the LHN for DBC from 2020-2038 was 16,596 homes (**922 dpa**). The Local Plan seeks to deliver this amount per annum. We support the Council's approach in meeting the LHN and we note that this figure is a minimum and should not be seen as a maximum or cap for development.
- Whilst we acknowledge that the proposed supply reflects the evidence available when the draft Plan was being prepared, it will be important that the final Local Plan reflects the latest Government LHN figures if housing need is to remain as met in For Dacorum Borough, the latest local housing need figure, as per the revisions to the

Standard Method in December 2020, is **1,023dpa**. The Council will also need to take into account of any changes in the affordability ratio when the latest data is published in March 2021 and any additional uplift required to account for economic growth. Policy SP2 should be amended to state that the Plan will make provision for 'a minimum of **18,414 homes**'.

- Finally, in coming to a final LHN figure, the Council should also take account of any unmet needs arising from neighbouring areas (as required by paragraph 60 of the NPPF). In order to meet this requirement and for the Plan to be sound, the Plan must reflect the outcome of discussions with neighboring authorities and, as far as possible, seek to meet additional needs arising from neighboring
- The development of the Site could help meet the additional need arising from the updated LHN figure

**QUESTION: Evidence
Base comment**

In additional to the fact that the Development Strategy in the draft Local Plan does not identify sufficient development sites to ensure the minimum housing need is delivered, our client's concerns stem from the inappropriateness of the assessment process undertaken to establish which sites should be allocated for development.

These concerns can be summarised as:

- The blanket assumption that there should not be any development in the AONB,
- The assessment process, and
- The lack of consideration of wider benefits offered by particular

Lack of consideration of sites in the AONB

As set out in the introduction, our client's land lies to the west of Markyate. The site lies in the Green Belt with a small part of the site lying in the AONB, the boundary of which bisects the site near it's centre.

As is discussed further below, the proposal put forward though the call for sites would avoid any built development in the AONB other than a length of road to connect the development to Pickford Road to the north, and create a bypass around the settlement, helping to elevate congestion problems on the High Street.

The Council's Sustainability Appraisal (Page 33, Table 5.3) sets out that the rationale behind not seeking any development in the AONB is that the Council places great weight on its importance and will first look to allocate sites outside the AONB. It concludes that the evidence currently suggests sufficient non- AONB sites are available and therefore the option of allocating land in the AONB has been rejected.

Whilst the need to protect the AONB in line with national policy is understood, the Council's current approach does not allow for a proper assessment of sites, the quality of the AONB across the Borough and the impact that particular development proposals would have on the AONB.

There is nothing in national policy that sets out that development in the AONB should be avoided.

Paragraph 172 of the NPPF sets out that:

Great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks, the Broads and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to these issues.... The scale and extent of development within these designated areas should be limited.

The NPPF therefore seeks to conserve and enhance the landscape in AONBs and ensure any development in them is 'limited' - it does not prevent development. Therefore, particularly in light of the need to find additional housing land, for the Local Plan to be justified, the Council will need to ensure that assessment process looks at all reasonable alternatives and that the specific impact of any developments on the AONB is properly assessed rather than ruling out any development.

In the case of our client's site at Markyate, the majority of which lies adjacent to but outside the AONB, the site itself makes a limited contribution to the overall value of the landscape. As already stated, the proposed development, which has been carefully thought-out to give regard to the site's context, would look to improve the edge treatment to the west of Markyate with new buffer planting and open space, and, despite a short length of road in the AONB, would lead to an overall enhancement to the quality of the AONB, in line with national policy.

The assessment process

The Council's consultants AECOM have undertaken an assessment of 144 sites provided by the Council. The assessment narrows this down to 46 sites which were considered to be potentially suitable for development, albeit with some constraints. Our client's site, in part, was one of the 46 sites which was considered potentially suitable. These sites have then been subject to a Site Selection Process, as detailed in the Site Selection Report and the appendices. This process is fraught with inaccuracies and unjustified conclusions as discussed further below.

The site put forward for consideration by our clients is referenced in the AECOM report as site 110. AECOM identified a sub area (site 110a) as being the area potentially suitable for development.

Confusingly:

- 1 The AECOM conclusions (Site Assessment Study, Volume 3, page 148) suggest the site includes the Markyate Village It does not, this is outside of the site.

- 2 Area 110a lies outside of the site put forward for consideration by our client, referenced as site 110. This is the area of scrubland referred to in the AECOM
- 3 When the findings of the AECOM report are then taken forward for further consideration by the Council, it is concluded that site 110 is unsuitable for development. Instead a site referenced 105 (which my clients control) is assessed and the conclusions for the site change again, with the issues used by AECOM to reduce site 110 to a 'suitable' area, used to support the conclusions that the site should not be allocated for

The Site Selection Report (Appendix A) sets out for site 110:

The site has number of very significant constraints, most notably majority of site lying in AONB, the rest of site in the AONB setting, site in Green Belt, no means of transport access unless Site 114 is developed, and even then, highly indirect to services and facilities in Markyate. Overlaps with the larger Site 105 which is identified for detailed testing

This assessment shows a lack of consistency with the approach of AECOM and introduces the fact that site 105, which was not put forward by the landowners for development in the first place, appears to be the site considered by the Council as a potential allocation. This is clarified by comparison of the plans included within the various assessment documents, enclosed separately to this representation.

This is inappropriate and undermines consideration given to the specific proposal put forward by my clients, which responds to the constraints and opportunities offered by the site.

Without even considering the lack of justification for the assessment undertaken, addressed below, the whole site selection process is confused and there is a clear lack of continuity in the evidence trail, which needs to be rectified.

In terms of the detail of the site assessment by AECOM, the first issue is the reduction in the site area. The site has been reduced to a net developable area of 1.4 hectares which appears to be based partly on concerns over '*avoiding a large cul-de-sac with a single point of access, creating traffic bottleneck*'. There is absolutely no justification for such a conclusion.

Despite the conclusions of AECOM, Site 110 is accessible. Access is available from Pickford Road to the north, and would also be available though the site south of London Road (site 114), were this to logically be made part of the policy for the proposed site allocation, which is in the gift of the Council.

Access to a smaller, standalone development of the parcel identified below would also be achievable directly off High View/Farrer Top via an existing reserved right of access to the north, should access from Pickford Road not be deemed acceptable.

Even if vehicular access were only to be through site 114 (as AECOM have assumed for the smaller site) there is no rationale given for the reduction in site area – it is simply an unevidenced assumption. In the absence of any technical justification, the site should not be ruled out on transport grounds as this is not justified.

Concerns appear to be raised about '*highly indirect routes to the village via site 114*'. This is incorrect as the site has greater access to the services and facilities of Markyate than site 114 owing to the existing footpath connection to Pickford Road to the north of the site, which would take residents directly to the centre of the village and the services available. This appears to have been ignored with an assumption the access should be by car, despite there being very limited parking available on the High Street and existing issues with congestion. In reality, site 110 is more accessible to services and facilities than site 114 and from an access perspective, is a more sustainable location for development.

The AECOM assessment also seems to assume Markyate Village Green is in the site area. It is not, it is adjacent to the site and the relationship of the site to the Village Green should be seen as a positive, rather than a negative, given the health and well-being benefits the space provides – acknowledged in the Sustainability Appraisal as an issue in Markyate.

Whilst a new access to Pickford Road would need to take in land on the edge of the AONB, as was set out in the call for sites submission, all residential development would be kept out of the AONB and a new landscaped village enclosure provided to actually enhance the AONB, in line with national policy. This approach would leave around 5.6 hectares of developable land on the edge of the village, capable of delivering around 160 dwellings. The assessment process (both that of AECOM and the Council) fails to acknowledge this, making an assumption that any form of development in any part of the AONB or its setting should be avoided. This is not justified.

The conclusion of the Council in the Site Selection Report that '*the majority of the site*' lies in the AONB is simply inaccurate. Over 60% of the site lies outside the AONB and, as noted above, the only development that would be needed in the AONB would be an access road to the north east – which as discussed below would deliver significant highway benefits to the area. Combined with a lack of consideration of the potential enhancements to the landscape character of the area, the assessment process is based on inaccurate assumptions about the impact of development in the area on the AONB, which to be justified will require a detailed assessment, balanced against the benefits of the scheme.

The lack of consideration of wider benefits offered by particular sites

As noted in the analysis above, development at south of Pickford Road would deliver enhancements to the local landscape by way of the creation of a new landscape buffer to the west of Markyate. It would also deliver enhancements to the local highway network by creating a bypass for the congested High Street, and the existing staggered priority junction between Pickford Road and the High Street which is constrained and difficult to manoeuvre and as a result suffers from congestion and delay during peak periods, coupled with a resulting negative impact on the local environment. These issues will be exacerbated by the current approach in the Local Plan whereas the development of the land off Pickford Road and delivery of a link road for the village will bypass this central junction whilst providing a route towards junction 9 of the M1, which is the major demand for movement from Markyate, as picked up in the accompanying Access Opportunities Report by WYG, which furthers the justifies the case for the link. The development will also offer the potential for compensatory improvements to the Green Belt – required as a result of the release of Green Belt land through the Local Plan.

At no point does the assessment process take into account the benefits offered by the development of our clients' land, or we assume those benefits offered by other proposals. This is a fundamental flaw in the process and means that the development strategy does not incorporate sites that would, on balance, likely to be preferential to other sites identified for allocation which may be in slightly less sensitive areas.

The disregard for the potential highway benefits that could be delivered by development south of Pickford Road Farm in particular are a significant concern. The assessment process does not even acknowledge delivery of the bypass as possibility and take a view on the opportunity, simply looking at the site on a red line basis. This is a significant flaw in the process which we believe needs to be amended moving forward, particularly in light if the need to identity more land to meet the minimum housing requirement.

A similar issue was recently raised at the examination of the Central Bedfordshire Local Plan, with the Inspectors appearing to have concerns as to why the Council had ignored the specific proposals put forward for consideration by promoters and taken their own view on how a site could be developed, ignoring potential mitigation measures and the benefits of development. Without a change in the process, DBC are likely to have similar issues when the Local Plan gets to examination.

Our clients are keen to ensure that the development of the site would bring tangible benefits to the village and for existing residents. They would be more than happy to engage further with the Council to explore opportunities presented by the site, which could include new community facilities, allotments or recreation space, alongside a residential development. Their promotion is not just about building houses but leave a legacy that will enhance the village for all and they feel strongly that such benefits should weigh be a factor in determining the strategy for growth.

QUESTION: Evidence Base comment	<ul style="list-style-type: none"> The review considers the key issues identified and our response to the conclusions that led to Land at Shendish not being allocated for development in the Draft Local This is particularly relevant given that the Council are now required to find sites to deliver an additional 1,818 dwellings over the Plan period as set out in sections 4 and 5 of this report, which should, in part, be met by an allocation on Land at Shendish. <p><i>Overall Approach</i></p> <ul style="list-style-type: none"> The Site Selection Topic Paper draws on site assessment work undertaken by AECOM and The AECOM assessments and subsequently the criteria against which the sites were assessed were relatively high level and when this is translated into the Site Selection Topic Paper Appendix B, it is difficult to discern the weighting applied by Officers in coming to their conclusions, given that many of the sites have similar 'rankings'. As such, there lacks transparency as to how some sites have been identified for allocation and others have not. It would be helpful to set out clearly a comparison between those sites in Appendix B identified for detailed testing. In addition, given the high level nature of the Site Assessment Topic Paper it is clear that some of the assumptions have not been as rigorously tested as is required by the process. This is particularly relevant to Land at Shendish, despite a series of technical assessments being provided to the Council in February 2019 (as contained in Appendix 4).

Shendish Manor and Fairfields (Site Reference 82)

- It is clear from the analysis set out in the proforma for Shendish Manor that the Council have not taken into account the detailed technical assessment work submitted in February 2019 when considering the criteria in the site selection process, or indeed the further information provided through informal engagement with

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

- While in many instances, such as the Green Belt Review and the Landscape Assessment work the conclusions are similarly positive, of particular concern is the transport technical assessment dealing with highway impact and with access into the site. We therefore set out a brief summary of the key relevant access and highway improvements proposed

Access and Highway Improvements

- We set out below a brief summary of the key proposals that address the concerns raised:
- The existing access from London Road can be improved to provide an access suitable for residential development by:
 - upgrading the existing London Road/ Shendish Manor junction with a traffic signal junction; and
 - a proposed signal controlled shuttle working arrangement over the rail
- The proposed improvements will also include a 1.8m footway along the southern side of the carriageway. The footways will connect to the existing provision along London Road, including dropped kerbs and tactile paving provided across the access. There is no need to widen the existing bridge
- The proposed shuttle working over the rail bridge will operate with substantial spare capacity, with a maximum queue of two vehicles during the network peak hours.

- Similarly, the proposed site access junction with London Road will also operate with ample capacity with minimal queuing and delays at the junction in both the network peak
- The proposals also provide for two accesses along Rucklers Lane, designed with a 5.5m carriageway and 2.0m footways on either side of the
- Access from Shearwater Road is also possible, although the development of the site is not reliant on that
 - The Transport Appraisal Update Note included in **Appendix 5** indicates that the assessments Site Assessment work undertaken by DBC and Aecom does not appear to reflect the previously submitted technical reports (February 2019 (**Appendix 4**) and Transport Appraisal February 2020 (**Appended to Appendix 5**) have been reviewed. These reports address all the issues raised in relation to access and highway impact in full. The proposals have also been discussed with Hertfordshire County Council Highways with a copy of the meeting note is contained in **Appendix B of our Appendix 5**.
- We set out below an updated version of the Site Proforma for Site 82 Shendish Manor and Fairfields, which reflects the technical assessment work that has been undertaken to support the promotion of the

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

DBC

Site Rank

Our Assessment and Commentary

Potential for new Public/ Community Facilities

The Vision Document and illustrative Masterplan (**Appendices 1 & 2**) demonstrate a range of public/community facilities to support a new village comprising of 500 dwellings based on the technical work undertaken to date including:

- Land for 2 FE Primary School with associated playing fields (to meet a wider need)
- 160 unit Care Village (439 residential units)
- Community Hub adjacent to School (with small shops, café, multi-use village hall)

- Station Plaza Hub - small shop/newsagent, café, bar, live work units
- Recreational facilities, children's play areas, playing fields

The delivery of a school site to serve both the development and wider need is seen as a critical component of the scheme. The Draft Infrastructure Delivery Plan clearly indicates that there is an under provision of primary school places in Kings Langley, with no deliverable solution to accommodate its proposed growth. Yet, the Draft Plan makes no reference to this in Policy SP26 Delivering Growth in Kings Langley. Given the sites close proximity and connectivity with Kings Langley, Land at Shendish could assist in meeting this need. In any event, there will be additional primary school need for the wider Hemel Hempstead area in seeking to accommodate the shortfall in housing.

Landscape

Given the nature of greenfield sites, any development is going to result in a change, as with the other sites assessed. However, the AECOM Volume 3 (pg 111) report notes the site is unlikely to have impact on the AONB and goes on to conclude that "the valley landform and tree cover make the site more suitable for allocation."

A Landscape Study was submitted to DBC in February 2019 (see **Appendix 4**) which indicates that the site is:

- Influenced by a mixture of urban fringe and countryside characteristics and character varies considerably;
- Urban influence from the SW edge of Hemel Hempsted along London Road; and
- Western end of Rucklers Lane is rural in character.

While the wider landscape including Shendish Manor, its parkland setting and golf course has a higher landscape value, the area identified for development is in the lower lying portion of the site and reflects the part of the site that has been assessed as having the lowest potential landscape sensitivity.

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

There are also opportunities to introduce a strong landscape boundary to reinforce existing tree lines, introduce a landscape buffer, green fingers and a network of green spaces running through.

The DBC Landscape Sensitivity Study Report gives the site a 'neighbourhood' landscape value, which reflects the above and sets out mitigation to address sensitivities which have been incorporated into the Vision Document in **Appendix 2**. It does not indicate that the site is not suitable for development.

An Arboricultural Assessment was also submitted in February 2019 and is contained in **Appendix 4**. The large majority of trees are of moderate value with 7% of trees surveyed being of high quality identified and 40 low quality trees. There are no TPO's pertaining to the site or immediately adjacent land.

The presence of trees across the site and in the wider setting, provides a mature landscape framework around which the new community can be based creating a sense of place for new residents.

Green Belt Evaluation

The site performs well in relation to the Green Belt review and reinforces our assessment as set out in our February 2019 submission contained in **Appendix 4**.

There is an opportunity to enhance the existing landscaping, particularly along the site boundary to the west but also along the railway line and to deliver compensatory green belt improvements beyond the site boundary, given the wider landownership, such as playing fields, landscape and biodiversity improvements. As previously indicated Shendish Manor golf course and associated facilities are likely to be retained and reconfigured, providing the opportunity for additional landscaping and public access.

Flooding

The site is at low risk from flooding. A Preliminary Utilities and Drainage Appraisal were submitted in February 2019 which sets out in greater detail the approach to drainage as reflected in the Vision Document and illustrative masterplan.

Ecology

Many other similar sites considered in this assessment have been ranked green rather than amber in the Topic Paper assessment. It is not clear what the differentiation is between the sites. As noted in the assessment there are no known ecological constraints, however it goes on to state that the nature of the grounds are likely to mean that the land is rich in biodiversity.

However, the Ecological Appraisal submitted in February 2019 (**Appendix 4**) (which also assesses land beyond the site) states that subject to the implementation of a range of measures, there would be no reduction in the ecological interest of the site or its surrounds is likely as a result of sensitive development of the land proposed for allocation and development could in fact provide opportunity to enhance its nature conservation interest for a number of species through incorporation of a range of measures.

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

Historic Environment

While the grounds of Shendish Manor are identified as a Local Registered Park, the boundary of the park is drawn immediately around the grounds at Shendish Manor, rather than the wider parkland, as confirmed in the Heritage Assessment submitted in February 2019 (**Appendix 4**).

The Assessment also goes on to confirm that the proposed development would not alter any of the important parts of the Grade II Listed Shendish Manor that contribute to the asset's significance, while in relation to the locally registered park and garden at Shendish Manor, there will be a small amount of harm to the wider parkland setting which can be mitigated. The report goes on to conclude that '*this assessment has identified no overriding heritage constraints that would preclude development within the site*'.

Highways Impact

The Transport Appraisal Update Note included in **Appendix 5** sets out a detailed response to both the Council's and Aecom's site analysis in relation to highways impact and notes that it does not appear that the previously submitted technical reports (February 2019 (**Appendix 4**) and Transport Appraisal February 2020 (**Appended to Appendix 5**) have been reviewed, which addressed the issues raised in the site assessment. The Update Note goes on to state that the Council's reasons for not allocating the site [in relation to highways] are ill founded (see paragraph 2.4.3).

The Update Note sets out a further access option to the north of the site via the Manor Estate onto Shearwater Road. There is a right to connect the two sites as set out in the Manor Estate S106 Agreement and it is confirmed in Update Note that there is capacity on the network to accommodate the development.

The original assessment work as well as the additional routing via Shearwater Road clearly demonstrate that the highway network can accommodate the development of Land at Shendish.

Public Transport

Land at Shendish is in a highly sustainable location, situated in the immediate vicinity of Apsley train station and bus stops on the London Road and is considered to be the best located site of all those assessed outside the town centre, in terms of accessibility to public transport.

As noted in the Transport Appraisal Update (see **Appendix 5**), the assessments undertaken by the Council and Aecom in this regard have been 'skewed' by a misconception that it would not be possible to provide a footpath across the railway line. However, the February 2019 and February 2020 Transport Appraisals set out technical solutions to address this issue, which are not reflected in the assessment which would deliver a 1.8m wide footpath across the railway line and enable a 5 minute walk time (400m) to the station from the centre of the site with hugely beneficial results in terms of sustainability.

Indeed, it is considered that Land at Shendish provides the best and only opportunity to provide such access to public transport and to assist with the Hemel Garden Communities objective of achieving a 60% modal shift.

Local Plan Reg 18 Representations | Land at Shendish Manor, Apsley

Access

The Transport Appraisal Update Note included in **Appendix 5** sets out a detailed response to both the Council's and Aecom's site analysis in relation to site access and in particular the access over the railway line. The Transport Appraisal Update Note states that it does not appear that the previously submitted technical reports (February 2019 and Transport Appraisal February 2020) have been reviewed, which address the access issues raised in the site assessment and demonstrates how this is overcome.

In addition, a further access is proposed as set out in the Transport Appraisal Update Note to the north of the site via the Manor Estate onto Shearwater Road. With Shearwater Road, there will be four vehicular access points as well as additional pedestrian routes. It is therefore considered that there is a robust access strategy.

Water and Wastewater

A Preliminary Utility and Drainage Appraisal was submitted to the Council in February 2019 (see **Appendix 4**) which provides an assessment in relation to the water and wastewater. Some reinforcement work would be required, however the relevant statutory undertakers have not indicated that new pumping station would be required.

Other Utilities

The Preliminary Utility and Drainage Appraisal submitted in February 2019 considers all utilities and sets out that it has been confirmed by the relevant providers that there is sufficient capacity in the gas and electricity supply network to accommodate approximately 500 dwellings.

Environmental Health

A Noise and Vibration Assessment was submitted in February 2019 (see **Appendix 4**) and indicates that the proposed site allocation is mainly exposed to sound from rail traffic on the Westcoast Mainline railway. The initial site risk assessment shows the site to be low to medium risk and a noise bund is proposed by way of mitigation.

An air quality assessment has been prepared which demonstrates that there will be no adverse impact arising as a result of the proposed development in relation to the highway network.

Minerals Consultation Area

The site is located in a Brick Clay Mineral Safeguarding area, however the area adjacent to the railway line is unlikely to be suitable for extraction due to health and safety and land stability issues. It is unlikely that it would be commercially viable to extract from the remaining site area and given the heritage sensitivities of the wider Shendish Manor parkland landscape, mineral extraction is not considered to be constraint to development.

- The above site assessment benefits from being populated with detailed site assessment information and data, from a range of detailed technical reports covering all the relevant criteria, rather than relying on the Borough wide high level assessment. While a series of technical reports were provided to the Council to assist with the site selection process, it is evident that this information has not been taken into
- As can be seen from the pro forma above, there are several criteria where it is demonstrated that the site performs significantly better than Council's assessment as set out in the Site Selection Topic Paper Appendix B (Sites for detailed testing).
- Given the review that has been undertaken of the DBC Site Selection Topic Paper criteria and the DBC Sustainability Appraisal relating specifically to Land at Shendish, it is evident that the site performs well and is the most sustainable site option and should be included in the Draft Local

- The focus for additional development to meet the identified shortfall of 1,818 dwellings over the Plan period, should be situated in Hemel Hempstead given it is the most sustainable location, as set out in sections 4 and 5 of these
- The Site Assessment Topic Paper considers a number of other Hemel Hempstead sites in Appendix B for detailed testing, including Land at Shendish. A comparison of Land at Shendish against those other sites is set out below, however it draws on a transport technical assessment comparison set out in the Transport Appraisal Technical Note in **Appendix 5** section 4.
- It is clear that Land at Shendish provides the best option for delivering part of the overall housing numbers shortfall required to meet the housing need for Dacorum.

QUESTION: Evidence Base comment	The evidence base is inadequate because a full consideration of all possible sites has not been carried out. Relying only on proposals put forward by developers may well be justified when the housing need can be accommodated relatively easily, but not when a substantial increase is required in a local authority area with not only a substantial percentage of Green Belt land but also an AONB. The council's own search showed potential for this approach but it was not given sufficient attention in the plan.

QUESTION: Evidence Base comment	Appendix 3: Comments on the Draft Infrastructure Delivery Plan The county council notes that infrastructure prioritisation will be used to identify the order of the infrastructure being implemented i.e. critical, essential, required. The current draft does not include what infrastructure will fall into which

category, and it states in the document that this will be identified in consultation with infrastructure providers as the Local Plan develops. HCC welcomes the opportunity for discussion as the plan progress.

According to Chapter 11 of the draft IDP “Community Facilities infrastructure, for the purposes of this IDP, relates to Youth Connections Hertfordshire, library provision, community facilities (such as local centres), community centres, new CCTV provision for new local centres, adult social care, art/public domain and a crematorium.” There are proposals for several community centres to be built as part of the infrastructure in different areas. For example, five community centres are included in the draft IDP proposal for Hemel Hempstead area. It is not clear the exact use of these community centres, but HCC welcomes the opportunity for further discussion as the Plan progress. However, it might be best if adult social care could be looked at separately as a different category.

It should be noted that potential infrastructure costs provided are for indicative purposes only and is subject to change. Some of the services have not provides a figure towards the calculation such as ACS, SEND, etc, and there are many other factors that would have an effect towards the final cost of the financial contributions.

Appendix B – Rest of the Borough – There are a lot of blank fields and assumptions made on education provision on the table. For education, no estimated costs are given and suggested that “utilise existing capacity and expansion if necessary” would be the way forward. Due to cumulative effect, it very much depends on where these 241 units will be delivered and the proposed solution may not be possible, e.g. Places in villages such as Gaddesden is in deficit.

QUESTION: Evidence Base comment it is common knowledge that the science does not support this proposal
 eg ons data shows only 355 houses a year are NEEDED and it would be in CURRENT residents best interests to have a lower level than that

Aside from the science the area of boxmoor trust lands is nationally accepted as pleasant with the low lying adjacent buildings and higher views of hills and trees it will change the nature of the area to have this dramatic unnecessary increase, this is a plan for tomorrows slums- shame on those that put there name to and vote for such a poorly planned (but high profit!!) proposal

QUESTION: Evidence Base comment

It appears from a review of the Council's evidence base, that the Site was not pursued as a potential allocation as a result of its assessment under site number 34/34a in AECOM's report (Site Assessment Study for Dacorum Borough Council Volume 3: Final Site Schedules dated January 2020). The Site was incorrectly assessed within the report on the basis of the red line being inaccurate. Despite previous submissions to the Council demonstrating that the Site boundary extends to the junction of Louise Walk/Green Lane, the access land was excluded from the AECOM assessment. On Page 42 of AECOM's assessment it concluded "*The site is not directly accessible from the local road network and would require access via Site 39 'Homefield' and/or from Louise Walk (across intervening land not within the site promoter's ownership)*". Further, this Assessment states that the site is "*susceptible to surface water flooding*" which contradicts the Environment Agency's mapping. Thakeham requests that the Council corrects this and re-considers the merits of the Site as part of its next review.

Notwithstanding these errors, the overall site conclusion is "*Site performs reasonably across a number of different criteria including Green Belt, agricultural land, and transport. However, it performs poorly on spatial opportunities and constraints. This is, however, easy to mitigate through appropriate amendment of site boundaries, with the southern part of the site excluded and the new boundary known as site 34a for the purposes of this study; this would also improve its performance on the transport criterion in terms of accessibility to the rest of the settlement. The allocation of 34a could be offset by*

compensatory improvements to that part of the site not allocated but remaining within the Green Belt and in the same ownership, in line with NPPF paragraph 138. Subject to this amendment, site considered potentially suitable for allocation with major constraints". As demonstrated in the Vision Document, the proposed layout respects these conclusions by focusing development on the area referred to as 34a and the remainder of the Site will remain largely undeveloped due to the Site's proposed sports use, which is protected in Paragraph 97 of the National Planning Policy Framework (NPPF).

QUESTION: Evidence Base comment

We note the discussion provided in Topic Paper 'Development Strategy November 2020': this tracks the history, marshals the data and argues that the dwelling numbers for the Reg18 Plan meets the housing needs for the Borough viz 922 [or recently 1023] pa. We dispute this is the correct basis for the Plan – which is based on 'national requirements' rather than local needs.

The paper includes a comment:

"6.7 – The preferred strategy is based on meeting the Borough's development needs. The Council has concluded that, on balance, this is the most appropriate approach in accordance with national requirements, while recognising that it raises a number of significant challenges for the Borough. Not meeting its housing and other needs could result in:

- the Plan being found unsound and the loss control over unwanted, speculative schemes and its ability to protect areas from development;*
- losing opportunities to properly plan for and coordinate essential infrastructure, community facilities, and affordable homes; and*
- increasing in-commuting, worsening housing affordability, and economic growth hampered by a shortage of housing."*

Below we set out data drawn from reliable sources e.g. ONS and the study commissioned by the Districts' joint Housing Needs Assessment quoted in the Plan.

The current dwelling numbers established in the Adopted 2013 Core Strategy sets an annual build rate of 430 pa.

- The Data shown in Fig 2 Housing Trajectory 2020 – 2038 [p 38] records anticipated completions across the Borough for 2020/21 as **654** and 21/22 as **1036** . These are well in excess of the Core Strategy and also the numbers projected by

The numbers set for the Draft Plan have been based on the ONS projections of housing 'need' but manipulated by a formula adopted by MHCLG to determine the 'national requirements' stated in Para 6.7 above.

Dacorum

ONS projection of Dacorum annual housing growth

After adjustment by MHCLG algorithm

After adjustment by MHCLG algorithm

ONS 2014

730

1023 [new standard applied]

ONS 2018

355

922 [mutant applied]

497 [new standard applied]

As a result, this Council objects to the adoption by the Borough of the Ministry's numbers: a lesser number to meet the assessed local needs must be agreed upon. This must lead to a revision of the site allocations and a new Plan.

We note the data in Table 6 Affordable Housing Need across South West Hertfordshire [page 62] indicates an assessed need of 611 dwellings pa.

DACORUM

Rented affordable housing

363
 Affordable Home Ownership
 248
 TOTAL
 611

We also note that the Borough assumes a continuing policy of requiring 40% of new dwellings should be allocated as 'affordable' on Growth areas [viz Green Belt], with 35% in the urban area of Hemel Hempstead and 40% elsewhere [DM 1 para a.]

For an area with acute need for homes at 'social rents' [see Para 14.29 et seq p 62] should the proportion not be increased to 50 or 60%?

This would change the market dynamics and deliver a better share to the community of the uplift to land value following the release of (mainly) Green Belt land and consent to development.

QUESTION: Evidence Base comment	For reasons given above I haven't time to read through all the plan. I would question the evidence that that many new homes are needed. The homes that have been built in Dacorum over the past few years, have not all sold quickly. An example is those at Upper Bourne End. I'm concerned that many of the new homes proposed will be too expensive for enough people to buy, even the affordable ones. I haven't time to look at your evidence that says that the homes will all be affordable to enough people that want to live on each of the sites. Have you calculated whether we still need the same number of homes, now we have left the EU?

**QUESTIONS NPPF
comment**

In the Government document ref **section 2. Achieving sustainable development**; Paragraph 9 it states “*Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area*”. I take this to indicate the policy is just advisory and intended plans should be reviewed locally hopefully involving people of the existing communities. This is much indicated in the following statement in paragraph 12 “.In **section 4. Decision-making** paragraph 52. “*Communities can use Neighbourhood Development Orders and Community Right to Build Orders to grant planning permission. These require the support of the local community through a referendum. Local planning authorities should take a proactive and positive approach to such proposals, working collaboratively with community organisations to resolve any issues before draft orders are submitted for examination*”. I take this to mean that local people with in the local communities will have an actual say into any local development. **Sections 5 Delivering a sufficient supply of homes and 6 Building a strong, competitive economy**: are covered in the DBC strategy plan, although I still have reservations about using green belt land and the demise of hedge or woodlands. This is why I support the statement in **section 11. Making effective use of land** ref paragraph 117. “*Planning policies and decisions should promote an effective use of land in meeting the need for homes and other uses, while safeguarding and improving the environment and ensuring safe and healthy living conditions. Strategic policies should set out a clear strategy for accommodating objectively assessed needs, in a way that makes as much use as possible of previously-developed or ‘brownfield’ land*”. Plus paragraph 118 “*b) recognise that some undeveloped land can perform many functions, such as for wildlife, recreation, flood risk mitigation, cooling/shading, carbon storage or food production*”; With ref to paragraph 123 c) “*local planning authorities should refuse applications which they consider fail to make efficient use of land, taking into account the policies in this Framework*”. I reference this respect of the planned Gypsy and Travellers pitches increase with in the plan. This land would surely be better utilised for building permeant dwelling for local residents. In **section 13. Protecting Green Belt land and section 15. Conserving and enhancing the natural environment** my main questions is who will police the planning applications to ensure these directives are maintained and who will have the last say in any application.

QUESTIONS NPPF comment	<p>I understand that local authorities are obliged to have a current Local Plan in order to control development. DBC is obliged to provide for development of over 16,500 houses due to government policy. However, government policy seems to be on the cusp of changing because there is a move to change the focus of housing development from the south towards the north of the country (the "Northern Power House") https://www.pbctoday.co.uk/news/planning-construction-news/north-south-housing-crisis/84337/</p> <p>However, there still needs to be a current Local Plan to control development. I just hope that this plan will be revised to take into account changes in emerging government policy regarding the levelling-up of the north/south divide.</p> <p>Also, authorities are meant to liaise on housing, which could facilitate New Towns, which can be planned holistically, for major developments.</p>

QUESTIONS NPPF comment	<p>Growth at any cost is not the answer. The "vision" mentions sustainability throughout, but none of this growth is sustainable. Overloading areas with a population it cannot support will be detrimental to the countryside, farm land, green space and the lives of those who have chosen to live in the area. Steady and monitored growth means strategic thinking and adapting to changing conditions. Build the infrastructure and only then, grow in line with that. The policy as it stands is to build at a rapid rate, seemingly at any cost.</p> <p>My experiences are of living in Tring, but it is likely the sentiment is echoed all through the Borough. For example, it is already hard to get a doctors/dentist appointment. Increase healthcare capacity, then grow the community.</p> <p>The employment growth you are forecasting is simply a proposal and not a reality. We simply can't know what the economic situation will be – some of your plan may succeed, but others will likely falter. Build the economy, then build the housing.</p> <p>Tring is a commuter town and a (significant) proportion of new inhabitants will likely commute to London on a trainline already at capacity. Station car parks are full before rush hour is over - where is the proposal to increase that capacity? You mention building a better link between Tring and the station, build it first and demonstrate that it works. What is currently in place is dangerous for pedestrians, cyclists and drivers. A small cohort will cycle in any weather, many (including me!) will not and will resort to driving. You also can't change the existing road infrastructure; Tring high street is extremely narrow. A single vehicle stopping (eg deliveries, mail van) backs up traffic. Increasing housing in Tring by such radical numbers will result in far more congestion and pollution – flying directly in the face of your environment plan. It's easy to demonstrate now that people drive to the town and do not walk, and an increase in population will result in increased traffic, particularly as the green belt sites are some distance from the town centre.</p> <p>Residents in this area should not be made to pay for short sighted thinking. The proposal to build vast numbers does one thing; makes developers very rich. They will build the standard "cookie cutter" houses, with minimal space between properties, minimal parking and a minimal green space. Once they have been paid, they will leave and having irreparably changed the face of the town, we, and future generations will be left to suffer the consequences.</p> <p>These new estates seen all over the country are the modern equivalent of tower blocks build in the 60s. We will look back in 50 years and wonder why anyone thought they were a good idea. The example to the west of Tring is a key demonstration of this. Decorating the house that face the main road with a pretty stone façade is just that, a façade. Look within the roads and you see narrow houses, squashed in at the edge of town, forcing people to drive to town. Maximising profits for developers, ignoring the real needs of the town inhabitants.</p>

In the original "vision", I believe the proposed number of houses in Tring was between 600 and 1100, which seemed absurdly high. You have now raised this to 2,731 (an odd number, how can you be so exact? Presumably because this was calculated by a formula rather than rationale thought) but cannot see any justification for that alarming increase. I made the same points then, grow the infrastructure and then grow the housing stock, not the other way around. Targets are not the answer. Destroying green belt and farm land is not the answer. Once you have made these mistakes, we cannot go back.

This may be mandated from Westminster, but your job as our local representatives is to fight back. I am not anti-growth – our population is expanding, but we need to grow in a sustainable, controlled way, not mandating the growth of a town by 40-50%. I spent many hours reading through the 2017 documents and responding. Now to find out that you are “doubling down” on expansion at such a rate is very disheartening. Many people do not have the time to read through such lengthy document and reply but their lack of response should not be taken as de facto approval. We love where we live. Please, take the time to make the right choice and not put this monstrosity of a plan into action.

<p>QUESTIONS NPPF comment</p>	<p>The Plan does not comply with the NPPF in several respects, as identified below.</p> <p>These comments relate specifically to proposals regarding Tring. There may be other parts of the Plan which are also non-compliant with the NPPF.</p> <ul style="list-style-type: none"> • Para 11(b) of NPPF requires ‘... <i>objectively assessed needs for housing...</i>’ <ul style="list-style-type: none"> • The number of houses proposed for Tring is in excess of the number calculated in the September 2020 South West Herts Housing Needs Assessment prepared by GL Hearn. • No objectively assessed reason(s) for this given in the Plan. • The Plan could be at risk of being determined as being ‘unsound’ for this reason. • Para 20(c) of NPPF requires ‘... <i>sufficient provision for community facilities (such as health...)</i>’ <ul style="list-style-type: none"> • Regarding the combined impact of Tr01, Tr02, Tr03 population increase in Tring, there appears to have been no assessment of the impact on capacity of existing primary care provision in Tring, nor time-scaled provision for additional primary healthcare facility to bridge the gap. • Para 20(d) of the NPPF requires ‘... <i>sufficient provision for conservation and enhancement of the natural environment including landscapes and green infrastructure...</i>’ <ul style="list-style-type: none"> • At Tr01, Tr02 and Tr03, whilst the existence of existing and historic field boundary patterns is recognised, there is nothing about their conservation. Many of the hedges in all three areas are over 600 years old as determined by the standard method of number of woody species per 30 metres of hedge length, and as such should be protected by law. • Paras 24-27 of NPPF require cooperation across administrative boundaries. <ul style="list-style-type: none"> • Regarding Tr01 and proposal for warehousing, there is no evidence of any discussion with the adjoining Aylesbury Vale District Council regarding the option of using existing industrial/employment land in AVDC at College Road North just 3 miles west of Tring for that warehousing. • Taking that option could generate much more employment in Tring than warehousing by, for example, freeing up land for a residential home. • The provisions for green/wildlife corridors (especially in Tr01, 02 and 03) are confused and inadequately defined. In particular, the corridors are poorly linked together and do not explicitly protect the hedgerows (including Marshcroft

Lane) and the surrounding countryside that are a key part of the character of the area and vital to local biodiversity. **Overall, the Plan for Tring falls short of NPPF para 147, and paras 99/100.**

- NPPF requires that development on Green Belt land achieves net environmental gain (NPPF para 72c) and is mitigated by compensating development of surrounding natural spaces; there is no evidence that this has been adequately considered. Although considered for NT Ashridge, it is not considered regarding the key 'honey pots' of Tring Park, Stubbings Wood or College Lake.
- Housing densities on Tr01, Tr02 and Tr03 are not stated, despite seemingly being required by NPPF para 123b.
- To meet NFFP requirements, 'wildlife corridors' need to be made explicit and mapped (NPPF para174), along with their linkage to existing wild/natural areas. This has not been done in the Plan.
- Policy SP23. There is no timescale given for any of the numbers (overall or by site) for the proposed housing sites in Tring, and yet these must exist as the overall growth for Dacorum is profiled by year. Why is this not stated, as required by NPPF para73?

QUESTIONS NPPF comment	<p>Growth area TR06 – off Brook Street Tring</p> <p>TR06 comprises Tring Market Auctions, The Tring Local History Museum, the Fire Station and Forge Car Park.</p> <p>Tring Market Auctions is located at the rear of the site of TR06 with access from Brook Street and a license to access the Forge Car Park.</p> <p>The ownership of the site is divided between Tring Town Council (Auction Rooms, Museum and the Market Place <i>hardstanding area</i>), Dacorum Borough Council (Forge Car Park) and Herts County Council (The Fire Station). The Freehold ownerships make it a somewhat complicated issue should planning proceed.</p> <p>In the proposal, no mention has been made for Tring Market Auctions to be included in the future plans of TR06, but mention has been made that if the site is re-developed Tring Market Auctions would be offered an alternative site in the town – where? The Auctions currently comprise about 16000 sq ft of buildings alone together with the adjoining parking areas. No detail has been provided and no mention of re-location provisions has been made. It appears the proposals are an afterthought to the Dacorum local plan. Tring Market Auctions occupy under the terms of a lease with Tring Town Council.</p> <p><u>The History and Current use of the Site</u></p> <p>In 1893 under the requirements of the Board of Agriculture and with the assistance of Lord Rothschild, the sale room with office was constructed in Brook Street. It was let to W Brown & Co. who conducted the first sale by auction in January 1894, since when auctions and sales have been held continually on the site for over 125 years – surely this qualifies the location to be part of Tring’s heritage.</p> <p>During recent years from 1960 there has been numerous enquiries and planning applications to develop the site with offices and supermarkets together with residential, all of which have been rejected.</p> <p>In 1993 the livestock auction ceased to operate leaving the chattel auction business to continue and flourish under the directorship of Stephen Hearn who took Tring Market Auctions to become independent and grow into the fine company it is today.</p>

It now has an extensive complex of four Auction Rooms, forming one of the largest and best known venues of its type in the Home Counties.

The sales attract a very large number of vendors and buyers from Tring and the surrounding towns and villages together with an ever-growing number of people from throughout the Home Counties and Internationally. Many of the buyers represent the trade and other specialist collectors in all categories.

The auctions provide a friendly and entertaining atmosphere on sale days making it an enjoyable venue for both business and pleasure. Regularly around 500 visitors attend on viewing and sale days, many of these attending the auction visit the town shops and local attractions.

Tring Market Auctions is a unique and key component of the town's economic town centre fabric. It provides a key fulcrum for maintaining the town centre economic sustainability. Visitors to the auctions provide business for other local shops and enterprises not just on sale days but across all the sites activities, its town centre location is fundamentally linked to many other local business and the town market continued sustainability.

The auction rooms provide a unique component part of maintaining Tring Town Centres' viability and supporting Tring based economic development. If Tring is expected to grow then business, jobs and economic infrastructure growth needs to be matched, Tring Market Auctions needs to be maintained as it supports this economic ambition of the Local Plan through continued town centre provision of a business that is complementary to local shops and does not provide competition, as would the proposed supermarket.

The Saleroom operates with a permanent staff of some 20 people which includes consultants and additional part time staff during sale days. The venue is a key local employer, bringing training and development and job opportunities for local young people.

The Auction sales deal with all periods of furnishings and collectables, processing over 50,000 lots each year providing an effective and affordable house furnishing option for many local people. It has a growing importance as a recycling centre, particularly when it is estimated over 20 tonnes of furniture timber is recycled every fortnight, which supports the climate ambitions in the Local Plan.

In addition the Auction provides a key income stream to the Town Council reducing precept impact on local residents and contributing to a sustainable model of local government

The Auction provides a service to both the local community and professional organisations throughout the Home Counties and beyond.

Points of Consideration

- It is positioned on a site with a long history of auctions and marketing of stock
- It is an important asset for the Town
- The auction attracts a large number of visitors to Tring throughout the year
- It employs local townspeople
- Town Centres should reflect the distinctive characteristics of a Market Town
- The site would not lend itself as a supermarket, particularly when this proposal is unproven

- The Auction Rooms occupy a strategic position at the head of an open space and wildlife corridor which runs from the Tring Park Mansion vista through to Icknield It is very much part of the local community, supporting many of the Town's organisations and groups

Planning Matters for Consideration

- Brook Street has a notorious reputation for being dangerous in parts where it is very narrow making it often difficult for vehicles to pass
- Tring High Street has introduced traffic calming measures
- It is suggested in the development plan that a supermarket would be served with a new carpark. Bearing in mind the development would include the existing Forge Car Park, does one interpret this as denying the town parking facilities
- Recently, two large planning applications have been refused in Brook Street both in close proximity to TR06, one being the residential re-development of Market Garage and the introduction of a residential development on the North Eastern side of Silk Mill works. In both instances, the reason for refusal included over-development of the respective sites and the dangers of access to Brook Street
- The plan proposals to create new food and drink leisure uses is difficult to understand when there are currently so many retail outlets available in Tring
- It states that any re-development of the site would only be permitted once replacement facilities are provided elsewhere in the town. The only specified new location is in Growth Area TR01 (Dunsley Farm) for the Fire and Rescue There is no detail with regard to the siting of Tring Market Auctions, nor the Local History Museum.
- One can create new buildings but one cannot create history

TR06 is not a redundant site, it forms an important part of Tring Town Centre with Tring Market Auctions and the local Museum providing both business and pleasure to hundreds of people throughout the year.

QUESTIONS NPPF comment	<p>Before we answer the consultation in detail we would like to point out how totally inappropriate and inopportune it is to consult on this draft plan at a time when the Government itself has admitted that the algorithm on which house building targets are based is itself flawed and has not yet been satisfactorily revised. The proposed distribution of new housing directly contravenes announced (and re-iterated) official policy, contained in the Government’s election manifesto, to level up economic growth and prosperity throughout the UK. Growth is needed in many other parts of the country but not in London and the South-East. Furthermore, current Green Belt policy looks as if it is being specifically flouted (see below.)</p> <p>Additionally, as admitted at 1.3, 2.26 & 9.8, the medium and long term socio- economic effects of both Brexit and Covid-19 are yet to be fully felt, let alone evaluated. Basing future policy on past assumptions will inevitably produce the wrong results and yet should the plan be enacted the damage will already have been done to existing communities, the environment and biodiversity alike. Indeed any Joint Strategic Plan is not due to come into force until the end of 2023. (1.41)</p> <p>The Government can hardly expect planning authorities to produce sustainable and viable plans if they are based on suspect assumptions and incomplete data. Surely it would be more productive to insist on receiving a clear and accurate articulation of policy before rushing into consultations posited on dubious foundations. The goalposts have already been shifted from 922 houses pa to 1023 which puts the target much closer to the 1100 level which the plan cites as an “unnecessary burden on infrastructure.” (Int. SA Appraisal c-34).This would indicate that the margins which the plan is working to are finely balanced and the infrastructure provisions barely adequate if 1023 is acceptable but 1100 is not.</p>

In fact we have evidence that, in addition to Liberal Democrats, a body of Conservative Dacorum councillors disagree with the substance of this plan and that compared to projections by the ONS the announced housing targets are 30-43% too high even before any proper re-assessment of more considered national levelling policies has taken place. In being asked to comment on this plan at this stage are the residents of Dacorum being used as pawns in some political game to demonstrate to central Government that its planning policies are flawed ? If DBC believes that, it should have the courage to make its own direct representations, as indeed other councils are doing.

Suffice to say, this plan represents the end product of the very worst of centralised, bureaucratic, top-down policy-making which takes little account of the constraints of a particular area.

However, having been forced into commenting on this plan at this juncture we recognise that if we do not provide our comments there is a grave danger that it is pushed through indiscriminately and unmodified to the detriment of the current resident population whose views, past experience shows, have carried little weight in final outcomes. It appears that "the development industry " and surrounding councils have already had more sway than existing tax paying residents as demonstrated in the Development Strategy Topic Paper at 4.15 & 4.18.and the Adopted Local Development Scheme of July 2020.

QUESTIONS NPPF comment	See attached representations - it is TTC's view that the overall strategy of directing so much growth to Tring is flawed. As currently drafted, the emerging Local Plan is not 'justified' by evidence, 'Effective', or 'Consistent with national policy'. In respect of the extensive and unnecessary Green Belt releases; potential impacts upon heritage assets, the AONB & the SAC; and the profligate use of high quality agricultural land; the emerging plan cannot be said to be in accordance with the NPPF.

QUESTIONS NPPF comment	<p>PLEASE READ PDF ATTACHMENT TO SEE IMAGES AND MAPS IN THE CONTEXT OF THE FULL RESPONSE - TEXT RESPONSE ONLY IS SHOWN BELOW</p> <p>GREEN BELT BOUNDARY -REAR OF CONISTON ROAD KINGS LANGLEY</p> <p>This submission is in relation to the position of the Green Belt boundary to the rear of houses in the lower/eastern part of Coniston Road Kings Langley.</p> <p>See proposals map extract.</p>

The boundary line, this submission refers to, is as described by DBC consultants Arups on their drawing below, as line KL.E

We do not agree with DBC's proposal to leave the GB boundary line unchanged.

The current GB boundary is an anomaly; it follows an arbitrary undefined line along a boundary that has no permanence.

The current boundary does not serve any of the 5 purposes that apply in the GB and the boundary should therefore be amended to the logical, permanent and defensible position at the end of the gardens, which are clearly all within the built up village of KL. The new boundary would follow the mature edge of the countryside.

In assessing the GB line at KL.E the consultants state in their conclusion below that "The Green Belt boundary is not demarcated by any physical features; it cuts across residential gardens.."

In their written analysis the consultants accept that para 139 of the NPPF states that "GB boundaries should be defined clearly, using physical features that are readily recognisable and likely to be permanent"

So by their own analysis they have confirmed that this is not the case, and therefore the fact that they then go on to reject any change is inappropriate.

Para 139 of the NPPF also states that "they must be defensible and well justified to be maintained in the long-term, beyond the lifetime of the plan"

There is no such justification in this case.

Despite the above, the consultants propose no change, as they have stated that there are no apparent "exceptional circumstances".

We do not agree with this being required as a justification. The land is not being proposed as a housing allocation and as stated above, it is simply the case that the current boundary does not comply with Para 139 and does not fulfil any of the 5 purposes.

The consultants accept that para 134 of the NPPF states that for retention of GB land it must meet the 5 purposes.

The 5 purposes are set out below and it is totally clear that the GB in this location does not meet any of these.

If the line was moved to the correct location at the end of the gardens it would then sit rightly at the edge of the countryside and fulfill some of the criteria below.

When seeking to justify if the land meets any of the 5 purposes the consultant has looked at the existing pattern of development and whether the absence of the GB line would lead to a proliferation of householder development "in a way that would harm the permanent openness of the countryside" This is not the same as any of the 5 GB purposes so is an incorrect analysis.

In any event, a change in the boundary line as we propose, would not change anything. PD is allowed in the GB and there are already large modern ancillary structures within the GB within the rear gardens of some properties as per the images included at the end of this submission. So the boundary line change would not make any difference.

Consultants have accepted in all DBC studies that the current GB line is not in a permanent location and slices randomly through gardens at an undefined point.

All reports accept that the whole of the length of the gardens are undoubtedly within the village settlement.

DBC consultants also tested sites to the west and north of the gardens as per the plan below, for potential housing allocations.

The comments below regarding the eastern boundary of site 94, which immediately abut the subject land, make the position clear.

Site 94 above was concluded by the consultants to be potentially suitable for allocation but ultimately not carried forward.

The plan below for site 94 clearly shows the rear garden line of the Coniston road homes to the East.

As for site 88, to the north, which was also tested, the conclusion again, below, clearly accepts that the entire length of gardens are within the “built-up area” of KL.

In conclusion the current GB boundary is simply in the wrong place, it is an anomaly.

It is not permanent nor defensible.

It is within the built-up area of KL.

It does not satisfy the 5 GB purposes.

Exceptional circumstances are not required, it is not being proposed as a housing allocation, it is just in the wrong place.

The boundary should be moved to follow the permanent defensible line at the end of the gardens adjoining open countryside.

Images are included below to illustrate the above points.

VIEWS SHOWING WHERE A PERMANENT, DEFENSIBLE BOUNDARY SHOULD BE, WITH COUNTRYISDE AT REAR

(NOTE: REAR FENCE ON RHS IMAGE IS NOT ON GB BOUNDARY LINE, THE STRUCTURES & FENCE IS BEYOND THE LINE)

GREEN BELT BOUNDARY LINE IS COMPLETELY UNDEFINED

QUESTIONS NPPF comment	<p>Government policy in the NPPF seeks to protect the Green Belt from new development. The following paragraphs are of particular relevance:-</p> <p>Paragraph 133 states that the Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.</p> <p>Paragraph 136 states that once established, Green Belt boundaries should only be altered where <u>exceptional circumstances</u> are <u>fully evidenced and justified</u>. It is not considered that the Council has met this policy test. In particular, the Council should not be encouraging speculative development such as supermarkets when no clear evidence of need exists.</p>

This is not a development site. It is a Green Belt site where development is defined as inappropriate in Government policy in the NPPF.

**QUESTIONS NPPF
comment**

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance. It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	National Policy and Guidance. Plan isn't consistent with NPPF because it doesn't offer the protection for Green Belt that the NPPF demands and prioritises Green Belt development over brownfield/urban development. No sign of levelling up the north and south of England as suggested should happen by our Prime Minister, just appears to be massive unsustainable over development in the south and loss of biodiversity and green space and farmland.

QUESTIONS NPPF comment	<ul style="list-style-type: none"> • Para 11(b) of the NPPF requires 'objectively assessed needs for housing'. The number of houses should specifically meet Dacorum's need for the full range of affordable social housing, as defined in our answer to question 1. • The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB. • Para 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' there appears to have been no assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap. • NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered. <p>The proposed wildlife corridors are not explicit or mapped as required by the NPPF.</p>

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c). With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b). Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance. It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c). With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield

redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment If the 2014 ONS figures for housing need are to be used then the Plan is not consistent with NPPF s.31 which states that “all policies should be underpinned by relevant and up-to-date evidence”.

It is not clear that the NPPF requirement for the Plan to fully explore the potential to make effective use of urban land (s. 118 and s.137) before releasing Green Belt land has been met.

There is sufficient uncertainty in the evidence provided for water supply to question whether the Plan is consistent with NPPF s.170 which states that “Planning policies and decisions should contribute to and enhance the natural and local environment”

QUESTIONS NPPF comment	<p>The Local Plan is not based on the latest ONS (2017) population statistics and has accepted without challenge the standard methodology for setting housing need. This the Government intended as a starting point, not a target, and with the potential loss in Dacorum of up to 850 hectares of Green Belt I believe there is room for negotiation and drawing back from this overstatement of housing need.</p> <p>The Council is failing to protect what makes Dacorum a highly desirable place to live i.e. the Green Belt around our historic towns and villages. The NPPF allows Councils to make a case for protecting the Green Belt unless there are exceptional circumstances. An overstatement of 'housing need' is not justified as an exceptional circumstance. In June 2016, the Housing Minister wrote to MPs and said that housing need alone will not change Green Belt boundaries.</p> <p>The plan has sites in Berkhamsted, Northchurch and Tring which are not sustainable. The road, lanes, canal bridges were just not built to cope with this level of housing, and, because of their historic character, cannot be widened – however much you wish it. The town centres may retain their historic appearance but they will be choked by overpopulation, pollution and traffic with this level of development.</p> <p>I ask the Council to amend the plan along more realistic lines and argue for the protection of our Green Belt</p>

QUESTIONS NPPF comment	<p>It seems paradoxical and unacceptable that the local public is being asked to comment on Dacorum's Local Plan with it's long term and far reaching consequences, at a time when central government has now radically moved it's stance on housing targets geographically. I would suggest Dacorum needs to reconsider some of it's key decisions in view of this and at that time consult it's electorate.</p> <p>One of the Government's tickets for re-election was to rebalance the south east : north divide. It seems clear that to focus large numbers of new houses in the already overdeveloped south goes against this premise.</p>

QUESTIONS NPPF comment	<p>The plan has failed to consider fully:</p> <p>Section 2, Achieving sustainable development, Point 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.</p> <p>Section 3, Strategic policies, Point 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' there appears to have been little assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap.</p> <p>Section 15, Conserving and enhancing the natural environment, Point 175</p>

NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield

sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified

comment**

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield

sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	<p>For the reasons set out in the preceding question the Draft Plan is not consistent with the NPPF. The principal areas of disagreement focus on the following paragraphs of the NPPF:</p> <ul style="list-style-type: none"> • Paragraph 60– this is clear that to determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance. The Draft Local Plan is based on a consultation version of the figure (922pa), rather than the now adopted position of 1,023pa homes. • Paragraph 11, 174(a)– both of these policies relate to avoiding significant harm on environmental resources with 174(a) specifically setting out the approach for how protected sites should be considered. The spatial strategy, through significant housing growth in Berkhamsted and Tring is not consistent with the NPPF, notably in light of the existence of alternative sites in areas located furthest away from the SSSI. • Paragraph 103 and 104– these both relate to the need to ensure that development is located in areas that can offer opportunities for sustainable development. Within the spatial strategy there is an under representation of the role that Kings Langley plays, both relative to other Large Villages and also when compared to the growth being planned for in Tring and Berkhamsted.

QUESTIONS NPPF comment	<i>While the Local Plan uses the PPS 2019 (which is required by the NPPF) as part of its evidence base it does not follow the strategic advice and guidance offered within the strategic element of the PPS. (See our answers to Q7 above).</i>

The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

The NPPF, MHCLG, Feb 2019, Paragraph 96 states:

“Planning and policies should provide communities with the facilities and spaces to meet their needs, including new open space, sport and recreation facilities. These should take into account any local strategies, plus any deficits or surpluses.

The provision of community facilities and services should be considered at the same time as when proposals for new homes and economic uses are developed.”

Comment: The Local Plan is proposing new housing and economic siting whilst it has not fully considered where or how it will meet the need for the new sporting facilities to meet the increased demand from the new housing; or where and how new sites for these important community facilities will be provided.

QUESTIONS NPPF comment	<p>There are three areas of non-compliance with the NPPF:</p> <p>Firstly, after the Draft Local Plan went out to consultation on 27th November 2020, the government announced (Footnote 59: https://www.gov.uk/government/news/plan-to-regenerate-england-s-cities-with-new-homes) on 16th December 2020 that it will change the formula that calculates housing need with the effect of moving development away from the South East of England and greenfield sites to urban areas of the North and the Midlands (Footnote 60: https://www.housingtoday.co.uk/news/jenrick-launches-revised-housing-numbers-algorithm/5109565.article).</p> <p>Given that 5,945 (35%) of the 16,899 dwellings earmarked in the Draft Local Plan (Footnote 61: table 2 p37: Sources of Housing Land Supply, Draft Local Plan 2020-2038) are located in the Green Belt, it is almost certain that the housing need for Dacorum will be revised downwards once the Government has updated its formula.</p> <p>Section 13 of the National Planning Policy Framework 2019 (NPPF) (Footnote 62: www.gov.uk/government/publications/national-planning-policy-framework--2 para 137, p41.) states that a strategic policy-making authority needs to “demonstrate that it has examined fully all other reasonable options for meeting its identified need for development” before it concludes “that exceptional circumstances exist to justify changes to the Green Belt boundaries”. Preparation of a Local Plan in itself does not amount to exceptional circumstances.</p> <p>If the draft local plan is not updated to reflect the expected reduced housing need, the Borough Council will be unable to comply with section 13 of the NPPF as it will be releasing green belt land in excess of the housing need (or, moreover, paragraph 35 of the NPPF (Footnote 63: plans are only ‘sound’ if they are “b) justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence”)).</p> <p>Indeed, the draft local plan itself recognises “that there are uncertainties over using this as our housing figure, particularly as there may be a further refinement to the process of calculating housing need and other matters that may need to be factored in. We will keep this issue under review as we progress to the next stage of the Plan and make any necessary adjustments when we know more” (Footnote 64: Paragraph 7.5 p35: Draft Local Plan).</p> <p>Therefore, Dacorum Borough Council should first update the Draft Local Plan to match the updated housing need and only commence the Regulation 19 Consultation once that exercise is complete.</p>

Secondly, paragraphs 102 and 103 of the National Planning & Policy Framework 2019 outline that the environmental impacts of traffic should be taken into account including appropriate opportunities to avoid any adverse effects, and authorities should seek to reduce congestion and emissions to improve air quality and public health. The location of Bank Mill Lane makes it inevitable that congestion will increase, in particular along London Road/High Street, where the shallow speed bumps and many incidences of on-street parking already block the carriageway, creating informal chicanes, and probably increase congestion and worsen air quality (Footnote 65 para 5.23, p75, Berkhamsted and Tring Sustainable Transport Study, November 2020). Making this situation worse would run counter to the NPPF and would be particularly damaging to quality of life given the location of two schools.

Thirdly, in the central part of the Bank Mill Lane site, there is a high risk of flooding as noted in the response to question 5. The south west Hertfordshire level 1 strategic flood risk assessment of October 2018 makes clear (Footnote 66: para 13.1.1, 105, SW Hertfordshire Level 1 SFRA October 2018.) that “the NPPF supports a risk-based and sequential approach to development [...] so that development is located in the lowest flood risk areas where possible; it is recommended that this approach is adopted for all future developments within South West Hertfordshire. New development [...] of land should wherever possible seek opportunities to reduce overall level of flood risk”. If the Bank Mill Lane site were to go ahead, it would be in contravention to this approach as supported by the NPPF.

QUESTIONS NPPF comment	<p>We have an obligation to redress inequality in the UK. Many towns in the North, South West and along our coasts, that have suffered years of neglect, should have funds diverted from the South East building projects in order to attract young people and small businesses to affordable, desirable, refurbished properties, so that communities can once again flourish and thrive.</p> <p>An overpopulated South East alongside deprived empty shopping centres in overlooked towns up and down the country is an irresponsible response to the future prosperity of the UK.</p> <p>Progress should be measured by putting the well- being of people living alongside nature in decent, regenerated towns and villages with character that build vibrant communities across the UK.</p>

We need to remind councils and politicians about their obligation to 'Level Up'; to provide a better environment for all across our country; to sustainably transform existing housing, shops and business premises and bring an end to out of town New Build.

It is time to be innovative and make better things happen for everyone now.

QUESTIONS NPPF comment	The Local Plan isn't consistent with NPPF because it doesn't offer the protection for Green Belt that the NPPF demands, and it prioritises Green Belt development over brownfield/urban development. The NPPF states that Green Belt boundaries can only be amended in exceptional circumstances. Please explain what these "exceptional circumstances" are. I cannot see them in the consultation documents. The existence of need alone, in this case need for more homes, does NOT meet the exceptional circumstances test, as stated in legal cases which clarify that there are a number of factors that councils must consider before exceptional circumstances are determined.

QUESTIONS NPPF comment	<p>The scale of the target for housing in Dacorum raised within this Local Plan is a 25% growth (16,596 houses) in housing, there is no evidence to support this 25% growth, especially considering there is a 9% (5,950 houses) population growth forecast by the ONS in Dacorum for the same period.</p> <p>Additionally this development plan is using a local housing target number that is based on a 300,000 national figure, a number which has a bias towards building in the South and on green belt areas.</p> <p>Whereas government are briefing to the press (via the consultation of the white paper and various 'controlled' leaks) that the national figure should be 170,000-200,000 once it is aligned to ONS figures (which government recommended), and</p>

should be biased towards building in the North to aid economic levelling up. The white paper also advises building should focus on brownfield sites and away from places like Dacorum which are covered with 50% green belt.

Finally none of the above calculations take into account the recent change in business working practice (working from home) which may reduce the volume in demand of commercial properties leaving some areas with an increased amount of brownfield sites.

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine " all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy " optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport” . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	As illustrated in the representations made to other questions in this consultation, Landhold Capital is concerned that there are many examples of inconstancy between the Council’s emerging Plan and the provisions of the Framework. Whilst these are referred to in respect of the relevant question, a brief summary of the relevant paragraphs and the issues raised is provided below.

- **Paragraph 11**– requires strategic policies to provide for the objectively assessed need for housing and other uses as a minimum.
- **Paragraph 16** –in particular the requirements for plans to be positively prepared in a way that is aspirational but deliverable, and to contain policies that are clearly written and ambiguous.
- **Paragraph 35** –the tests of soundness and the requirement for the plan to be positively prepared and meet OAN as a minimum; justified, taking into account reasonable alternatives; effective and deliverable over the plan period; and consistent with the provisions of national policy.
- **Paragraph 59** – to support the Government’s objective of significantly boosting the supply of homes.
- **Paragraph 77** – the consideration of whether market housing would help to facilitate the delivery of affordable housing on rural exception sites.
- **Paragraph 123**– requiring plans to contain policies to optimise the use of land and the use of minimum density standards.
- **Paragraph 136** - where it is proposed that changes to Green Belt boundaries will be made through neighbourhood plans, strategic policies must establish the need for such changes.
- **Paragraph 138** – when it has been concluded that it is necessary to release land from the Green Belt, first consideration should be given to land which has been previously developed and/or is well served by public transport.

QUESTIONS NPPF comment

Numerous local groups have commented on this consultation including Berkhamsted Residents Action Group (BRAG), Berkhamsted Citizens Association, CPRE, Chiltern Society, Berkhamsted Town Council, Dacorum Green Party, Berkhamsted and Tring Labour Party to name a few. **I agree with the stance taken by all of these groups.** The fact that all these (and there will be others) are providing the same substantive message from the local population to you

should demonstrate that these proposals do not have the support of the people. I do not propose to add to your reading burden by rehashing all of their points but I do make the following observations.

The NPPF is very clear that simply to meet a housing target is not a sufficient reason to release Green Belt. There is nothing in this plan or supporting documents that qualifies as "exceptional circumstances" that could justify such large scale release of Green Belt lands.

QUESTIONS NPPF comment No
No, the Plan is not consistent with the NPPF as despite the positive wording throughout the plan. It does not take realistic account of such constraints as Green Belt and the AONB etc, in accepting the proposed housing numbers, and in site selection. No supporting evidence of the exceptional circumstances required to justify building on Greenbelt Land is provided

QUESTIONS NPPF comment	<p>Para 11(b) of the NPPF requires ‘objectively assessed needs for housing’. The number of houses should specifically meet Dacorum’s need for the full range of affordable social housing, as defined in our answer to question 1. The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.</p> <p>Para 20(c) of the NPPF requires ‘sufficient provision for community facilities (such as health)’ there appears to have been no assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap.</p> <p>NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered. The proposed wildlife corridors are not explicit or mapped as required by the NPPF.</p>

QUESTIONS NPPF comment	<p>My family and I moved to Dacorum in 2018 to settle in Berkhamsted for at least the next 25 years. Over this time, we look forward to developing ever stronger links throughout the community and watching our young children grow to adulthood. As such, we have a vested interest in seeing the Borough grow in a way that works for all its citizens – both existing and new.</p> <p>Against this backdrop, I wish to formally state my strong objections to the ‘Dacorum Local Plan (2020-2038) Emerging Strategy for Growth’. The evidence suggests that, if this plan is approved, your personal legacy will be of considerably worsening towns and communities within the Borough. For new residents moving to the area and for those already here. For all ages. And for all financial situations. I suspect you don’t want to be remembered after you leave this office as the person who caused such damage to an area. So, I ask you to fundamentally rethink.</p> <p>Due to the COVID-19 constraints on travel and mingling for the past year, my experience, and hence prime objection, focuses on the portions of the Local Plan relating to developments in the Berkhamsted area.</p> <p>To summarise:</p> <ol style="list-style-type: none"> 1. Flawed modelling of number and type of housing required would fail to meet the actual needs of the voters moving into the area, whilst disrupting those already here far more than is needed. 2. Inadequate commitment to transport infrastructure needs to accommodate the changes proposed would result in a legacy of decades of traffic congestion for voters in Dacorum and visitors to the area. 3. Insufficient provision of water supply, wastewater disposal and other infrastructure would leave households with shortages and damage the local water table, with knock-on considerations around subsidence and environmental impact. 4. Unworkable assumptions around public transport and foot / bike journeys would see considerable increase to carbon emissions in the Borough and considerable travel delays around vital transport hotspots (town centres, schools, rail stations, etc.).

5. The above worsening of conditions for the new and existing voters in the area also comes with an ecological cost due to the loss of green belt. If green belt is to be repurposed, it must be done in a way that makes the greatest positive impact for the current and future residents of Berkhamsted. This plan wastes that sacrifice.

These are fundamental flaws in the strategy underpinning the 'Dacorum Local Plan (2020-2038) Emerging Strategy for Growth'. As such, this plan should be rejected outright, and a new plan drawn up that addresses the actual needs of the area for today and the long-term success of the Borough.

These points are expanded below.

Incorrect Assumptions for Housing Provision

Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, the scale of proposed development in Dacorum is out of balance with the long-term needs.

The Local Plan does not take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6, which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and Area of Outstanding Natural Beauty (AONB).

Recent Government guidance on calculating housing need has been, at best, confusing. The algorithm for calculating housing need that has been used by the Council is a flawed means to calculate the housing needs of the Borough, based on old data.

The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. Instead, the Local Plan is based on calculations using outdated 2014 based ONS data, which results in a significant overestimate of housing needs.

I note that on 16 December 2020 the UK Government published its response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%. The Government also said:

"More broadly, we heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We (Government) should be clear that meeting housing need is never a reason to cause unacceptable harm to such places. ...

Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

Failure to Provide Adequate Supportive Infrastructure

Looking at the proposed developments on Green Belt land, there is insufficient consideration in the Local Plan for the provision of new infrastructure or upgrading the current infrastructure to support the scale of the proposed developments.

Taking a specific example of transportation, consider area 'Bk01 - South of Berkhamsted'. This proposes adding 850 residential units with 2 ways out of the development:

1. Emerging immediately next to a secondary school of over 1300 pupils; and
2. Passing two primary schools on a single, narrow residential road with a 10% gradient and car parking on both sides.

These roads are heavily congested during normal times with the current population – the road by the secondary school backing up during school run times to the main A41 route into and out of the town. Adding 850 households of cars will lead to transport paralysis for the new residents, the homes already in the area, pupils of the schools and people trying to access Berkhamsted from the A41 during peak times.

Similarly, increasing the number of dwelling by over 1,800 in the Berkhamsted area will result in a considerable increase in vehicular traffic through the centre of the town – a route that is already heavily congested at peak times at the A4251 / A416 junction and along the High Street. This is due to the historic layout of the town along a valley with steep sides meaning there are only these two roads into and through the town.

For the increase in population proposed in the Local Plan, there would need to be a considerable extra investment in road widening, traffic flow control measures and new roads to bypass the congestion points inherent with a medieval market town situated in a steep river valley.

Impact on Green Belt and Other Designated Land

The Local Plan states that a key objective is “minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB”. This strategic principle is then violated by the declared mission to provide at least 100% of the Council’s self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity.

Noting that 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns AONB, this approach comes at considerable environmental cost.

As such, the Local Plan must be fundamentally reworked to avoid such contradictions in strategic goals and principles.

You are now faced with a personal choice.

Whether to be remembered for taking the easy choice and sticking to an inherently flawed plan that will deeply damage the Borough of Dacorum forever – your lasting legacy – or to take the brave decision and do what is right – to reject the current plan and come back with one based on the actual needs of the current and future voters and households of Dacorum.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport". There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p>

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

**QUESTIONS NPPF
comment**

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “ all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “ optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport” . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’ s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	<p>Framework (NPPF) and supporting guidance?</p> <p>Para 11(b) of the NPPF requires 'objectively assessed needs for housing'. The number of houses should specifically meet Dacorum's need for the full range of affordable social housing, as defined in my answer to question 1.</p> <p>The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.</p> <p>Para 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' there appears to have been no assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap.</p> <p>NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered.</p> <p>The proposed wildlife corridors are not explicit or mapped as required by the NPPF.</p>

QUESTIONS NPPF comment	<p>In the main yes, although we have a couple of comments:</p> <p>The NPPF emphasises the importance of green belt and its use only in “exceptional circumstances”. The data used to calculate housing and the availability of all brownfield sites (including those related to office space post pandemic) should be explored before resorting to this route.</p> <p>While sustainable transport is prioritised, the NPPF states that planning should offer a “genuine choice of transport modes” and that “local car ownership levels” should be taken into account. Given the most recent census data and our proximity to major road networks, we feel it should be recognised that owning a car (even if not used for all journeys) will still be a choice for many people.</p>

QUESTIONS NPPF comment	<p>This Plan is not consistent with the NPPF.</p> <p>It fails to use the latest data to calculate Dacorum's needs. It accepts the Standard Methodology numbers as a target when government itself has said these numbers are not targets.</p> <p>The Plan does not take into account the many natural constraints of the area, and fails to protect the green belt as required; in fact a staggeringly large proportion of sites are greenfield or greenbelt. There is no argument or evidence that there are 'exceptional circumstances' that mean the green belt should be used.</p> <p>The Plan promotes sites that cannot be regarded as sustainable or well served by public transport. The so-called sustainability of this plan is wishful thinking.</p>

QUESTIONS NPPF comment	<p><i>Yes, subject to comments below</i></p> <p>We will seek to support DBC with their interpretation of national planning guidance where possible. We trust that DBC will continue to plan for a level of growth that is consistent with the NPPF and the crux of government housing policy which is to provide adequate housing.</p> <p>We appreciate that DBC will need to have regard to the very recent government response to the consultation on housing numbers. BSG continue to support DBC's objectives in adopting a balanced approach which weighs the need for additional housing and investment, with the desire to retain the unique character of Berkhamsted.</p> <p>We do of course understand that there are strong local feelings regarding development per se and green belt releases in particular. Given the potential moving goal posts around housing numbers and wider planning reforms generally, there has been some evidence of other Councils delaying or amending local plans, often many times.</p> <p>We support DBC and their officers for pressing ahead with a plan despite these uncertainties and trust that DBC can continue to do so. A delayed and/or challenged plan is of no benefit to anyone.</p> <p>As stated throughout our submission, we believe that regardless of the final level of growth approved for Berkhamsted that the proposed housing site at Haslam Field BK03 is the most appropriate of any for a green belt release. The BSG wishes to continue to improve its excellent education offering and its extensive investment programme in the local economy. An allocation of site BK03 with a relocation to Cy04 will consolidate that process and be of great mutual benefit to the local community as a whole.</p>

QUESTIONS NPPF comment	The Plan isn't consistent with NPPF because it doesn't offer the protection for Green Belt that the NPPF demands and prioritises Green Belt development over brownfield/urban development. The Berkhamsted Delivery Strategy is clearly developer led and offers no protection to Green Belt or infrastructure improvements for issues that already exist.

QUESTIONS NPPF comment	<p>I believe the Local Plan mis-applies the exceptional need test to support housing and development expansion that is not required by the government or even local people to the extent claimed if recalculated based on the 2018 ONS population dataset without the proposed new national method to calculate need and taking into account recent reports of depopulation. The evidence for this is very clearly laid out in the CPRE Herts report - see Evidence. <i>The focus of the NPPF is to preserve Green Belt land and other sites of historical, ecological or environmental significance and yet the Council chooses to disregard that steer.</i> The Local Plan does not have all the necessary assessments and remedial plans in place to enable a fully considered view of the impact of a development (eg in relation to supply of water to protect the chalk streams and enable recovery) and presumes a positive outcome. It is therefore biased in favour of the development and mis-directs the public. Classifying undeveloped peripheral sites in Green Belt land as 'urban' is presumptive and also could be considered prejudicial to the outcome of the consultation. It assumes in advance: a) that development on our Green Belt sites has already taken places following demonstration that exceptional circumstances apply (unsound on both counts); and b) that the local people currently regard their Green Belt sites as 'urban' (very unlikely – most people regard farmland or pasture surrounded by hedgerows and lanes as rural or semi-rural).</p> <p>I have not had time to prepare a full answer to this question due to the short consultation period, but there are relevant comments in other sections that I trust the Council will take account of.</p>

QUESTIONS NPPF comment	<p>No account has been taken of paragraph 11, footnote 6, which allows the development to be restricted because of other constraints, including the impact on the green belt and AONB.</p> <p>The policy is not based on the most up to date government data (the 2018 National Office for Statistics projections) and has consequently overestimated the requirement for new housing in the borough.</p> <p>The policy fails to give sufficient weight to environmental considerations, as required by law. Carbon plans must be integral to development plans.</p> <p>The plan fails to take account of topographical constraints and promotes the use of sites not served by public transport and which cannot sensibly be regarded as sustainable.</p>

QUESTIONS NPPF comment	<p>The Local Plan is based on 3 yr old data and flawed assumptions about population growth and housing need.</p> <p>There is a gaping inconsistency in the document between the fine words in defence of the existing Green Belt and the colossal sacrifice of Green Belt land proposed here. The NPPF aims to protect Green Belt, the Local Plan would turn small market towns into vast conurbations which will ruin the special aesthetic benefits of these rolling Chilterns Hills. Many of these are listed as AONB. The NPPF requires authorities to argue 'exceptional circumstances' before building on the Green Belt. The Housing Minister is quoted as saying that housing targets alone were not to be regarded as exceptional circumstances. DBC is not using the opportunity which the NPPF offers to reduce the housing target.</p>

QUESTIONS NPPF comment	Nearly all development proposed will be on Greenbelt. – this is <i>against</i> Government policy. • The land between Shootersway and the A41 has always been considered as the “Green Lung” for Berkhamsted – absorbing vehicle emissions from the A41. Traffic has increased significantly in recent years. <u>A green buffer is needed.</u> • They should look at further Brownfield sites – as they are required to do.

QUESTIONS NPPF comment	<p>In this plan, thousands of new homes are simply bolted onto the perimeters of our existing towns over green belt land with inadequate thought to the pressures on water supplies, traffic needs, medical facilities, education, recreation, biodiversity, recycling centres and employment needs. There is little sustainability around the construction nor the preserving of our heritage about this plan.</p> <p>The plan has fundamental conflicts with stated government policy around green spaces, nature recovery and sustainability.</p>

QUESTIONS NPPF comment	<p>Many of my responses in other sections have illustrated that I do not consider tht the Plan is consistent with the NPPF. The Plan fails to take into account the natural constraints of the Borough, and so fails to provide protection for Green Belt as required by the NPPF.</p> <p>The data used to calculate the Boroughs needs is out of date</p> <p>DBC accepts the Standard Methodology numbers as a strict target - Government has made it absolutely clear that these numbers are NOT targets</p> <p>There is no evidence presented in the Plan to explain or justify the 'exceptional circumstances' for building on Green Belt that passes the tests included in the NPPF.</p> <p>The Plan promotes sites that cannot be regarded as sustainable or well served by public transport.</p>

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p> <p>With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p> <p>With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether</p>

minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b). Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance. It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	The plan does not consider Section 3, Strategic policies, Point 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' - where is that reflected in the plan? Again this seems to have been omitted Section 15, Conserving and enhancing the natural environment, Point 175 This requires development on Green Belt to achieve net environmental gain - how is this being delivered?

QUESTIONS NPPF comment	I understand government policy has changed in regards to housing, choosing instead to focus on a regeneration of the Midlands and the North of England and the employment and industries of those regions. Further to this, they have chosen to focus development of housing on brownfield land and in urban areas. With the so called "mutant algorithm", as it became known, now abandoned, there is no impetus for large amounts of further construction in the South East or Dacorum more specifically, especially in Green Belt areas. Please see this article in Housing Today for further details: https://www.housingtoday.co.uk/news/jenrick-launches-revised-housing-numbers-algorithm/5109565.article

QUESTIONS NPPF comment	<p>For Tring, at least, Plan does not appear to with the NPPF in many areas</p> <ul style="list-style-type: none"> • Para 11(b) of NPPF requires ‘... <i>objectively assessed needs for housing...</i>’ <p>The number of houses proposed for Tring is in excess of the number calculated in the September 2020 South West Herts Housing Needs Assessment prepared by GL Hearn.</p> <p>No objectively assessed reason(s) for this given in the Plan.</p> <ul style="list-style-type: none"> • Para 20(c) of NPPF requires ‘... <i>sufficient provision for community facilities (such as health...)</i>’ <p>Regarding the combined impact of Tr01, Tr02, Tr03 population increase in Tring, there appears to have been no assessment of the impact on capacity of existing primary care provision in Tring, nor time-scaled provision for additional primary healthcare facility to bridge the gap.</p> <ul style="list-style-type: none"> • Para 20(d) of the NPPF requires ‘... <i>sufficient provision for conservation and enhancement of the natural environment including landscapes and green infrastructure...</i>’ <p>At Tr01, Tr02 and Tr03, whilst the existence of existing and historic field boundary patterns is recognised, there is nothing about their conservation. Many of the hedges in all three areas are over 600 years old as determined by the standard method of number of woody species per 30 metres of hedge length, and as such should be protected by law.</p> <ul style="list-style-type: none"> • Paras 24-27 of NPPF require cooperation across administrative boundaries. <p>Regarding Tr01 and proposal for warehousing, there is no evidence of any discussion with the adjoining Aylesbury Vale District Council regarding the option of using existing industrial/employment land in AVDC at College Road North just 3 miles west of Tring for that warehousing.</p> <p>Taking that option could generate much more employment in Tring than warehousing by, for example, freeing up land for a residential home.</p> <ul style="list-style-type: none"> • The provisions for green/wildlife corridors (especially in Tr01, 02 and 03) are confused and inadequately defined. In particular, the corridors are poorly linked together and do not explicitly protect the hedgerows (including Marshcroft Lane) and the surrounding countryside that are a key part of the character of the area and vital to local biodiversity. <p>Overall, the Plan for Tring falls short of NPPF para 147, and paras 99/100.</p> <ul style="list-style-type: none"> • NPPF requires that development on Green Belt land achieves net environmental gain (NPPF para 72c) and is mitigated by compensating development of surrounding natural spaces; there is no evidence that this has been adequately considered. Although considered for NT Ashridge, it is not considered regarding the key ‘honey pots’ of Tring Park, Stubbings Wood or College Lake.

- Housing densities on Tr01, Tr02 and Tr03 are not stated, despite seemingly being required by NPPF para 123b.
- To meet NFFP requirements, 'wildlife corridors' need to be made explicit and mapped (NPPF para174), along with their linkage to existing wild/natural areas. This has not been done in the Plan.
- Policy SP23. There is no timescale given for any of the numbers (overall or by site) for the proposed housing sites in Tring, and yet these must exist as the overall growth for Dacorum is profiled by year. Why is this not stated, as required by NPPF para73?

The Plan does not comply with the NPPF in several respects, as identified below.

These comments relate specifically to proposals regarding Tring. There may be other parts of the Plan which are also non-compliant with the NPPF.

The Plan could be at risk of being determined as being 'unsound' for this reason.

QUESTIONS NPPF comment	<p>Tornadoes appreciates the scale of the task DBC has in producing a Local Plan and reasonably expects that DBC has the expertise to ensure that the Plans it develops are consistent with the National Planning Policy Framework.</p> <p>Tornadoes primary concern then it that the DBC Local Plan is developed with the needs of the existing community of Tring first generally and the young people of Tring in particular.</p> <p>The NPPF, MHCLG, Feb 2019, Paragraph 96 states:</p> <p>“Planning and policies should provide communities with the facilities and spaces to meet their needs, including new open space, sport and recreation facilities. These should take into account any local strategies, plus any deficits or surpluses. The provision of community facilities and services should be considered at the same time as when proposals for new homes and economic uses are developed.”</p> <p>So, as the Local Plan is proposing new housing and economic siting whilst it has not fully considered where or how it will meet the need for the new sporting facilities to meet the increased demand from the new housing or where and how new sites for these important community facilities will be provided, Tornadoes must conclude that at present the Plan is not consistent with the national Planning Policy Framework.</p> <p>Given the close proximity Tring enjoys to both Buckinghamshire & Bedfordshire and its remoteness from the rest of Hertfordshire, for Tornadoes, there is thus far, no evidence that DBC is taking into account the massive developments currently underway and proposed in: Aston Clinton, Western Turville and Halton/Wendover, Buckinghamshire, along with the developments already underway in and around Pitstone, Bedfordshire.</p> <p>DBC do not appear to have proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The Local Plan currently therefore fails to accord with National Policy and Guidance.</p>

QUESTIONS NPPF comment	<p>Whilst the Plan may be consistent with the policy and guidance at the present time, there are a number of instances where the Courts have noted that the Policies are out of date and should be updated. Indeed, the White Paper consultation is even recognised in the Introduction to this plan. Further, in the latest consultation to be issued by The Ministry, they note that a further review of the Framework is likely to be required. To set the precedent for such large housing developments against a moving background is not appropriate.</p> <p>The assumed allocation of new build housing to Dacorum is disproportionate to its size and could potentially adversely impact its character. The allocation further ignores two very fundamental changes to the need for housing that underpin this:</p> <p>1) the move towards remote working, which has been accelerate by COVID-19, will reduce the need for the London Commuter Belt as less people need to travel to the city. Those that do are expected to do so less frequently and are likely to be prepared to undertake longer commutes; and</p> <p>2) the "Leveling Up Agenda", supported by all parties, seeks to rebalance the prosperity of the nation by shifting the balance away from London towards the Midlands and the North. Housing allocations should follow this drive so as not to create future deficits in the northern parts of the country.</p>

QUESTIONS NPPF comment	As I have stated in Comment 23, the plan isn't consistent with NPPF because it prioritises Green Belt development over brownfield/urban development. It is absurd that such major changes to beautiful market towns are even being considered during a global pandemic, when it is unclear what post-pandemic working practices, and the very obviously linked housing location decisions will be. I urge you to challenge the targets, rethink the strategy to prioritise development on areas of land which are not designated Green Belt sites.

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p> <p>With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p>

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

**QUESTIONS NPPF
comment**

NPPF S11 —

- There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.
- There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

- It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.
- The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.
- This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.
- The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.
- It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.
- The council should insist that the government uses the most accurate, and therefore up-to- date information to calculate the housing target — not just to change the statistics used to suit their aims.
- Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt
- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments

- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 a) to check the unrestricted sprawl of large built-up areas;
- 3 b) to prevent neighbouring towns merging into one another;
- 4 c) to assist in safeguarding the countryside from encroachment;
- 5 d) to preserve the setting and special character of historic towns; and
- 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.
- Social housing need in Dacorum
- Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.
- Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

- We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities
- There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.
- The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.
- Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

- The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “ all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “ optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport” . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution

towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

NPPF S11 —

— There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.

— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.

— The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.

— This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.

— The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.

— It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

— The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.

— Using out-of-date statistics means that the projections are not an 'objectively assessed need'.

— There is insufficient justification for building on the Green Belt

— There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites

— The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

— Not enough thought has been given to options for housing that is not on the Green Belt

— The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)

— it is reasonable to project a higher amount of windfall given the rules on town centre and office developments

— the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt

According to the NPPF:

134. Green Belt serves five purposes:

a) to check the unrestricted sprawl of large built-up areas;

- b) to prevent neighbouring towns merging into one another;
- c) to assist in safeguarding the countryside from encroachment;
- d) to preserve the setting and special character of historic towns; and
- e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

— There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	<p>I feel the Council have not only ignored the National Planning Policy Framework (NPPF) - PARAGRAPH 11, FOOTNOTE 6 - which allows local authorities to RESTRICT the scale of development due to other planning constraints - including impacts on the Green Belt and AONB - but I feel they have gone against the NPPF totally.</p> <p>Once this green and pleasant land is gone, there is no turning back. There is no bringing it back. It will be gone forever. We are in the midst of a mass global environmental disaster which we are struggling to contain and slow down let alone reverse. Any plans the council are putting forward to provide additional housing MUST and I mean MUST guarantee the protection and safety of green belt land, natural habitats - and MUST create additional ones. The current plans do not do this - in fact - they do the exact opposite.</p> <p>The areas of Green Belt land also provides massive protection to the town by absorbing pollution including noise pollution - from the fast and very busy A41. The land also provides a glorious natural environment to exercise in - it is safe and healthy - never more needed than during the last few months. And what of the farming land that will be lost? The proposed area in the South East of Berkhamsted is abundantly farmed - it must be kept that way - not used for property development.</p> <p>The Dacorum plan is in total and utter contradiction to National Government Policy. Dacorum MUST retract this plan and reconsider it to look for alternatives on existing Brownfield sites - and there are a stack of those all over Dacorum - and the post Covid world will likely mean more Brownfield will become available too.</p>

QUESTIONS NPPF comment	National Policy and Guidance – the Plan isn't consistent with NPPF because it doesn't offer the protection for Green Belt that the NPPF demands and prioritises Green Belt development over brownfield/urban development.

QUESTIONS NPPF comment	<p>I agree with the following statements within the Grove Fields Residents Association response to the Local Plan:</p> <p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p> <p>With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p> <p>With regard Part b) there is an expectation that the strategy "optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport". There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted</p>

in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b). Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance. It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c). With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy "optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport". There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	I object to the proposed local plan for Dacorum, which has been based on incorrect statistics. With regard to BK06, West Berkhamsted, although it is actually Northchurch, I realise that more houses need to be built in the area but too many houses, 200 of the wrong type are proposed and the only people that will benefit are the developers selling off the green belt. What we need in this area is good affordable social housing using brown-field sites, not using green belt land. There has been too much green belt land built on already in this area and the local roads cannot cope with the extra traffic.

I would like to draw your attention to The National Planning Policy Framework set out by the government in 2019, Chapter 13 Protecting Green Belt Land. It states that:

133. The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.

134. Green Belt serves five purposes:

- a) to check the unrestricted sprawl of large built-up areas;
- b) to prevent neighbouring towns merging into one another;
- c) to assist in safeguarding the countryside from encroachment;
- d) to preserve the setting and special character of historic towns; and
- e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

Why is the National Planning Policy Framework being ignored? Surely it was put in place to protect the green belt? How much work has been undertaken to identify brown field sites that could be used in the area instead of green belt land?

We should be protecting our green belt for future generations, not destroying it.

QUESTIONS NPPF comment	b. Between the government's objectives and guidance and the proposed plan: i. The government (in December 2020) is condemnatory about "consultation responses which did not fully recognise that the standard method does not present a 'target' in plan making but instead provides a starting point for determining the level of need for housing in an area. It is only after this, alongside what constraints areas face, such as Green Belt, and the land that is actually available for development that the decision on how many homes should be planned for is made." What the Local Plan proposes is in direct conflict with these guidelines. ii. The Local Plan has an objective of building 16,600 home locally by 2038 but it is unclear where this figure comes from. The ONS has revised downwards its estimate of housing requirements locally but the Local Plan does not reflect this. If the government has kept up-to-date why cannot the council?
