— The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)

— it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments

— the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt According to the NPPF:

134. Green Belt serves five purposes:

a) to check the unrestricted sprawl of large built-up areas;

b) to prevent neighbouring towns merging into one another;

c) to assist in safeguarding the countryside from encroachment;

d) to preserve the setting and special character of historic towns; and

e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

— There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable

**QUESTIONS NPPF
comment**

NPPF S11 —

— There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.
— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.
— The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.
— This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.
— The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.
— It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.
— The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.
— Using out-of-date statistics means that the projections are not an 'objectively assessed need'.
— There is insufficient justification for building on the Green Belt
— There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
— The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt
- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt

According to the NPPF:

134. Green Belt serves five purposes:

- a) to check the unrestricted sprawl of large built-up areas;
- b) to prevent neighbouring towns merging into one another;
- c) to assist in safeguarding the countryside from encroachment;
- d) to preserve the setting and special character of historic towns; and
- e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

- We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities
- There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

NPPF S11 —

— There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.

— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.

— The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.

— This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.

— The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.

— It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

— The council should insist that the government uses the most accurate, and therefore up-to date information to calculate the housing target — not just to change the statistics used to suit their aims.

— Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt — There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites

— The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

— Not enough thought has been given to options for housing that is not on the Green Belt — The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)

— it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments — the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt According to the NPPF:

134. Green Belt serves five purposes:

- a) to check the unrestricted sprawl of large built-up areas;
- b) to prevent neighbouring towns merging into one another;
- c) to assist in safeguarding the countryside from encroachment;
- d) to preserve the setting and special character of historic towns; and

e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities — There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

- 3 b) to prevent neighbouring towns merging into one another;
- 4 c) to assist in safeguarding the countryside from encroachment;
- 5 d) to preserve the setting and special character of historic towns; and
- 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities — There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment 8/ Do you think the plan is consistent with National Planning Policy Framework (NPPF) and supporting guidance?

NPPF S11 — There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting. There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

QUESTIONS NPPF comment	The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	No. It concentrates development in the South East where there is already too much housing, traffic and concentration of population with the resulting problems of water resources, and infrastructure deficiencies as I have previously stated. The pressing national requirement is for levelling up. DBC's plans do just the opposite. There should be greater housing

density in other parts of the country to encourage the movement of populations to more peripheral areas resulting in their regeneration.

**QUESTIONS NPPF
comment**

NPPF S11 —

— There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.

— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.

— The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.

— This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.

— The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.

— It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

— The council should insist that the government uses the most accurate, and therefore up-to- date information to calculate the housing target — not just to change the statistics used to suit their aims.

— Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt — There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites

— The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

— Not enough thought has been given to options for housing that is not on the Green Belt

— The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided) — it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments — the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt According to the NPPF:

134. Green Belt serves five purposes:

- a) to check the unrestricted sprawl of large built-up areas;
- b) to prevent neighbouring towns merging into one another;
- c) to assist in safeguarding the countryside from encroachment;
- d) to preserve the setting and special character of historic towns; and

e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities — There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	<p>Harrow agrees that the draft Growth Plan has been prepared in accordance with the NPPF and supporting guidance; it contains numerous cross-references to the NPPF explaining the links and context to support, inter alia, the development strategy, identification of strategic priorities and policies.</p> <p>Sustainable Development The draft plan is consistent with these policies and principles of the NPPF, and sets out an objective of achieving sustainable development by balancing net benefits to the three key dimensions of economic, social and environmental value. In order to achieve this, the plan recognises that the development needs of the borough can only be met by releasing some land from the Green Belt.</p> <p>Exceptional Circumstances for Green Belt Release The Council has produced significant evidence to demonstrate that it has explored all reasonable alternatives, as required by paragraph 137 of NPPF, leading to the conclusion that exceptional circumstances exist to justify changes to Green Belt boundaries. That evidence:</p> <ul style="list-style-type: none"> • Confirms that maximum use will be made of suitable brownfield sites and underutilised land (Urban Capacity Study) • Aims to optimise the density of development in appropriate locations, in particular Hemel Hempstead town centre, but also other urban locations (); and • Has been informed by discussions with neighbouring authorities, none of whom are able to accommodate any of the borough's development needs and are, in fact, looking to Dacorum to assist them in meeting their own needs <p>Having identified that exceptional circumstances do exist, the evidence base also clearly sets out the process that the Council has undertaken to identifying appropriate sites for Green Belt release, including 3 Green Belt Studies, Settlement Hierarchy Study, Sustainability Appraisal, and the Berkhamsted - Tring Transport Corridor Study. In accordance with paragraph 138 of NPPF, those studies give first consideration to land that is well-served by public transport. The analysis and evidence base clearly supports the allocation of land east of Tring as a strategic growth area which meets the following NPPF criteria; it:</p> <ul style="list-style-type: none"> • Is a sustainable expansion Tring • Is in a location that is well-served by public transport • Does not encroach into the Chilterns AONB • Has clearly defined physical boundaries that are readily recognisable and permanent, that will not need to be altered at the end of the plan period; and • Offers opportunities for compensatory improvements to the environmental quality and accessibility remaining Green Belt land

Housing Requirement
 Finally, Harrow would highlight draft policy SP2 which sets out a housing target of 16,596 homes (minimum) over the plan period. This figure was calculated in accordance with the revised Standard Methodology set out by Government in September 2020 which indicated that the borough should aim to provided 923 dwellings per annum. Since the draft plan was prepared, Government has issued a revised Standard Methodology that now sets a target of 1022 dwellings per annum for Dacorum. Harrow notes that this would result in an increase of c.1800 additional homes over the plan period which should be reflected in the Submitted Plan and increase the urgency to identify deliverable sites to ensure the 5YHLS is met.

QUESTIONS NPPF comment	<p>No, in particular, the housing target figure, which does not reflect an actual objectively assessed need (as per the usual understanding of these words), has been met in these proposals without due consideration to contradicting rules and guidance. Whilst planning is a balance, undue import has been placed on meeting this target, which is arbitrary, and too little consideration has been given to protections for the green belt and AoNB.</p> <p>Objectively Assessed Need</p> <p>The National Planning Policy Framework requires that all planning authorities prepare Local Plans to provide housing which meets their objectively assessed need.</p> <p>1 <i>Plans and decisions should apply a presumption in favour of sustainable development.</i></p> <p><i>For plan-making this means that:</i></p> <p><i>(a) plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change;</i></p> <p><i>(b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas 5 , unless:</i></p> <p><i>(i) the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area 6 ; or</i></p> <p><i>(ii) any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.</i></p> <p>NPPF section 11</p>

Section 60 of the NPPF states that the housing need is calculated using the standard method. However, the standard method has changed during the course of this consultation.

- 1 *To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for.*

NPPF section 60

In November 2020 Dacorum had a standard method 'housing target' of 922 dwellings per year. This was based on the most recent (2018) Office for National Statistics ('ONS') housing need projections, (355 per year averaged over the next ten years for Dacorum). The standard method algorithm then used housing affordability, and change in housing affordability in the last ten years to adjust this number upward. For Dacorum, the adjustment resulted in a multiplier applied to the ONS projected need of 2.6, and overall housing target of 922 dwellings per year.

In December 2020, Government announced that it would no longer be using this method to calculate the housing target and that it would revert to an earlier affordability algorithm. This algorithm limited the uplift from ONS figures to 1.4 x ONS figures (this cap was applied nationally). With the latest ONS figures suggesting that Dacorum would need 355 dwellings per year this would provide a housing need figure of around 500 dwellings per annum. However, rather than use the latest projections, Government announced that it would instead revert to the 2014 projections.

'We will continue to use the 2014-based household projections. The government has carefully considered whether to use the 2018-based household projections and has concluded that, due to the substantial change in the distribution of housing need that would arise as a result, in the interests of stability for local planning and for local communities, it will continue to expect only the use of the 2014-based projections.'

Government response to the local housing need proposals in 'Changes to the current planning system'

Since the latest housing need projections for Dacorum are around half the 2014 ones (355 vs 730) these out of date 2014 projections results in a 'housing target' figure for Dacorum of 1023 dwellings per year. It is specifically stated that

the reason for using the old projections is because there is a 'substantial change' between the old projections and the most recent ones. On top of this, recent evidence suggests that, if anything, the population increases expected will suffer a further down turn from the 2018 projections, at least in the short term ('UK population in biggest fall since Second World War' Telegraph 14 January 2021)

Therefore, it is self-evident that the housing target produced by the standard method cannot be accurately described as an objectively assessed need.

We urge the Council to request of Government, that the best information available be used to calculate our housing target. For example, the most recent ONS figures, and the standard method (which limits uplift to a multiplier of 1.4).

If Government does not agree to alter the Standard Method across the country to reflect more recent trends, the NPPF section 60 allows for planning authorities to set their own housing need under 'exceptional circumstances'.

It cannot be said that a target figure set by using the 2014 projections (which the Government has acknowledged are 'substantially' different to the latest projections) can be described as an 'objectively assessed need'. On top of this, providing for over double the actual required need would fundamentally fly against the UK's 2050 net zero commitment, and the requirement to 'support the transition to a low carbon economy' laid out in the NPPF. These two facts combined provide an exceptional circumstance to apply an alternative approach to calculating the housing need.

Therefore, DBC should use the latest housing projections, along with the original standard method to calculate its housing need, and update this local plan to provide for approximately 9,000 homes over 18 years.

Protected areas

If the Council does not decide to challenge the housing target provided by MHCLG, it is clear from the NPPF and the recent release from MHCLG that this target is considered only a starting point.

11 b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless:

- 1 *the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or*

- 1 *any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.*

NPPF section 11

‘Many respondents to the consultation were concerned that the ‘targets’ provided by the standard method were not appropriate for individual local authority areas. Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt.’

Government response to the local housing need proposals in ‘Changes to the current planning system’

It is also worth noting that the reasons given by MHCLG for rejecting the complex housing algorithm (which for Dacorum gave a target figure of 2.6 x the ONS projected housing need) focused on the pressure on rural areas and Green belt.

‘In particular, we heard that too much strain was being put on our rural areas and not enough focus was on the renewal of our towns and cities.’

‘in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.’

Government response to the local housing need proposals in ‘Changes to the current planning system’

Whilst ‘unacceptable harm’ is not defined here, any definition which did not include the complete removal of land from greenbelt for housing, would be nonsensical. In the emerging local plan, which uses the figure of 922 dwellings per year, it is proposed that over 750 hectares of Green belt be released and allocated for housing. If the figure of 1023 dwellings

per year were used, it can only be assumed that pressure on green belt would be even greater. Great import is attached to preserving Greenbelt in the NPPF.

- 1 *The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.*

NPPF section 133

It is also clear from the NPPF that the release of green belt can only be considered in ‘exceptional circumstances’.

- 1 *Once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans. Strategic policies should establish the need for any changes to Green Belt boundaries, having regard to their intended permanence in the long term, so they can endure beyond the plan period. Where a need for changes to Green Belt boundaries has been established through strategic policies, detailed amendments to those boundaries may be made through non-strategic policies, including neighbourhood plans.*

NPPF Section 136

Meeting a housing target which cannot be accurately described as an ‘objectively assessed need’ does not qualify as an ‘exceptional circumstance’ in which Green belt may be released.

Furthermore, even where exceptional circumstances do apply, green belt may only be released as a last resort.

- 1 *Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:*
 - 2 *a) makes as much use as possible of suitable brownfield sites and under utilised land;*
 - 3 *b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and*

- 4 *c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.*

NPPF Section 137

It does not appear that all other options for housing have been appropriately considered in this local plan. For example, the windfall figure which is provided for in this plan is 133.8 per year. In the last fourteen years the windfall figure has been 306.2 per year on average (346 per year over the last five years). The figure for this plan period is therefore far lower than could be reasonably expected.

On top of this, permitted development rules have been widened significantly, and now include the potential to increase the height of buildings, adding flats on top of blocks of flats and adding flats on top of shops. This will likely mean that windfall figures will if anything, increase. The pandemic is expected to cause a shift away from office space for businesses in favour of more flexible working practices and this is expected to free up more brown field space within towns all over the country, thereby taking pressure off green field and green belt sites.

According to the NPPF:

- 1 *Green Belt serves five purposes:*
- 2 *a) to check the unrestricted sprawl of large built-up areas;*
- 3 *b) to prevent neighbouring towns merging into one another;*
- 4 *c) to assist in safeguarding the countryside from encroachment;*
- 5 *d) to preserve the setting and special character of historic towns; and*
- 6 *e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.*

NPPF Section 134

Releasing the amount of Green belt proposed, particularly since it is not needed, will prevent essential regeneration of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 *Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).*

NPPF Section 61

There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have asked for it. This need is not being met adequately through this plan. The Local Housing Needs Assessment ('LHNA') for South West Herts estimated that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing. Whilst this figure may also be reduced to a certain extent by the expected decrease in growth which has caused the ONS projections for our area to reduce from 730 to 355 dwellings per year, the current need is large, and requires positive steps to meet it.

It is our view that the Local Plan does not include sufficient allocations for affordable, or in particular social housing for the needs of Dacorum residents. Of the 922 dwellings proposed per year only 70 per year are expected to be social housing, as compared to the need for 315 social dwellings per year from the LHNA. We would like to see a third of housing delivered in Dacorum be social rented housing. A large proportion of the housing envisioned in this plan will not be affordable for our residents, but is rather aimed at London commuters, and this will do nothing to improve the affordability of housing in Dacorum.

QUESTIONS NPPF comment	Our main concern is whether the removal of land from the Green Belt for new development demonstrates the exceptional circumstances required by the NPPF. This is covered in more detail above. Also, the Plan does not appear to address footnote 6 of paragraph 11, which enables housing numbers to be reduced where there would be a detrimental impact on the Green Belt and/or AONB.

QUESTIONS NPPF comment	No. It concentrates development in the South East where there is already too much housing, traffic and concentration of population with the resulting problems of water resources, and infrastructure deficiencies as I have previously stated. The pressing national requirement is for levelling up. DBC's plans do just the opposite. There should be greater housing density in other parts of the country to encourage the movement of populations to more peripheral areas resulting in their regeneration.

QUESTIONS NPPF comment	<p>NPPF S11 —</p> <p>— There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.</p> <p>— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.</p> <p>NPPF - S60</p> <p>— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.</p>

- The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.
- This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.
- The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.
- It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.
- The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.
- Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt — There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt
- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided) — it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments — the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt According to the NPPF:
 - 1 Green Belt serves five purposes:
 - 2 a) to check the unrestricted sprawl of large built-up areas;
 - 3 b) to prevent neighbouring towns merging into one another;
 - 4 c) to assist in safeguarding the countryside from encroachment;
 - 5 d) to preserve the setting and special character of historic towns; and
 - 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities — There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

**QUESTIONS NPPF
comment**

NPPF S11 —

- There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.
- There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

- It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.
- The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.
- This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.
- The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.
- It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

- The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.
- Using out-of-date statistics means that the projections are not an 'objectively assessed need'.
- There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt
- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given the rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 a) to check the unrestricted sprawl of large built-up areas;
- 3 b) to prevent neighbouring towns merging into one another;
- 4 c) to assist in safeguarding the countryside from encroachment;
- 5 d) to preserve the setting and special character of historic towns; and
- 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

- We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities
- There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy "optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport". There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

**QUESTIONS NPPF
comment**

NPPF S11 —

— There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.

— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.

— The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.

— This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.

— The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.

— It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

— The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.

— Using out-of-date statistics means that the projections are not an 'objectively assessed need'.

— There is insufficient justification for building on the Green Belt

— There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites

— The proportion of social housing is far too low — there are 7000 people currently on the housing register, these are people who qualify for social housing but cannot get it because of the shortage.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

— Not enough thought has been given to options for housing that is not on the Green Belt

- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given the rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt.

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 a) to check the unrestricted sprawl of large built-up areas;
- 3 b) to prevent neighbouring towns merging into one another;
- 4 c) to assist in safeguarding the countryside from encroachment;
- 5 d) to preserve the setting and special character of historic towns; and
- 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

- We need the right houses, in the right places for local people, the proposed plan seems more likely to meet the need of developers than the local communities
- There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.
- The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.
- Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

**QUESTIONS NPPF
comment**

NPPF S11 —

— There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.

— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.

— The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.

— This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.

— The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.

— It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

— The council should insist that the government uses the most accurate, and therefore up-to- date information to calculate the housing target — not just to change the statistics used to suit their aims.

— Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt

— There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites

— The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

— Not enough thought has been given to options for housing that is not on the Green Belt

— The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)

— it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments

— the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt

According to the NPPF:

134. Green Belt serves five purposes:

a) to check the unrestricted sprawl of large built-up areas;

- b) to prevent neighbouring towns merging into one another;
- c) to assist in safeguarding the countryside from encroachment;
- d) to preserve the setting and special character of historic towns; and
- e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

— There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p> <p>With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p> <p>With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).</p> <p>Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.</p> <p>It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.</p>

QUESTIONS NPPF comment	No. As above, significant and critical inconsistencies of proposed policies / delivery strategies exist vs the NPPF. Specifically, DBC have misunderstood and para 11 of the NPPF, and have failed to give appropriate weight to the qualifications of the obligation to meet objectively assessed needs, relating to Green Belt land and Areas of Outstanding Natural Beauty.

QUESTIONS NPPF comment	The NPPF states that Green Belt land may only be released in exceptional circumstances. These circumstances have not been met regarding Tring for the following three reasons: the lack of evidence that other options have been assessed (e.g.brownfield sites): a lack of analysis of the number of houses that might or might not be accommodated per hectare and the lack of cooperation with neighbouring counties. Thus the need for 5945 homes within the Green Belt has not been shown.

QUESTIONS NPPF comment	The NPPF as currently worded is not complied with in respect of protection of designated areas of landscape and wildlife importance and the Green Belt, or in respect of the identification of the need for development for housing and employment in particular, as addressed in response to the earlier questions in this questionnaire. Further, the Emerging Strategy does not take sufficient account of matters relating to climate change adaptation, the promotion of biodiversity and provision of infrastructure as required by legislation,

QUESTIONS NPPF comment	NPPF S11 — — There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.

— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.

— The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.

— This government policy could be characterised as saying, *'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.'* It is irrational to risk the Green Belt on such an ill-conceived policy.

— The housing need projections based on the most recent data **are about half of the 2014 data** (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.

— It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

— The council should insist that the government uses the most accurate, and therefore up-to date information to calculate the housing target — not just to change the statistics used to suit their aims.

— Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt

— There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites

— The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

— Not enough thought has been given to options for housing that is not on the Green Belt

— The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)

— it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments

— the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 a) to check the unrestricted sprawl of large built-up areas;
- 3 b) to prevent neighbouring towns merging into one another;
- 4 c) to assist in safeguarding the countryside from encroachment;
- 5 d) to preserve the setting and special character of historic towns; and
- 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

— There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	<p>Green belt grab insupportable and unjustifiable</p> <p>If implemented, these damaging proposals would result in the loss of a massive 850 hectares of the Green Belt, the wider countryside and urban green space for development.</p> <p>There is ample basis for arguing that land constraints such as Green Belt preservation may be used as a justification for lowering housing numbers as derived from central government calculations. The Council should challenge both the August and December 2020 housing targets which are clearly not in line with the intent of Government policy before proceeding further with the Local Plan.</p> <p>Furthermore, it is not clear that the It is not clear that the NPPF requirement for the Plan to fully explore the potential to make effective use of urban land (s. 118 and s.137) before releasing Green Belt land has been met.</p> <p>Surely the role of the high street and local retail/ employment needs to be considered very more carefully in the light of new work practices. I would ask that the local plan be revised.</p>

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

**QUESTIONS NPPF
comment**

NPPF S11 — There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.
— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60 — It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.
The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.
It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

The council should insist that the government uses the most accurate, and therefore up-to- date information to calculate the housing target — not just to change the statistics used to suit their aims.
Using out-of-date statistics means that the projections are not an 'objectively assessed need'.
There is insufficient justification for building on the Green Belt
There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137
Not enough thought has been given to options for housing that is not on the Green Belt
The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
The pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt
According to the NPPF:
134. Green Belt serves five purposes:
a) to check the unrestricted sprawl of large built-up areas;
b) to prevent neighbouring towns merging into one another;
c) to assist in safeguarding the countryside from encroachment;
d) to preserve the setting and special character of historic towns; and
e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic. Social housing need in Dacorum Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

QUESTIONS NPPF comment	Do you think the plan is consistent with National Planning Policy Framework (NPPF) and supporting guidance? There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting. There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.

The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.

This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.

The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed to the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.

It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.

- Using out-of-date statistics means that the projections are not an 'objectively assessed need'.
- There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt

- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given the rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 a) to check the unrestricted sprawl of large built-up areas;
- 3 b) to prevent neighbouring towns merging into one another;
- 4 c) to assist in safeguarding the countryside from encroachment;
- 5 d) to preserve the setting and special character of historic towns; and
- 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

- We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities
- There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment

Do you think the plan is consistent with National Planning Policy Framework (NPPF) and supporting guidance?

There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.

There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.

The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.

This government policy could be characterised as saying, 'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.' It is irrational to risk the Green Belt on such an ill-conceived policy.

The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.

It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.

The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.

- Using out-of-date statistics means that the projections are not an 'objectively assessed need'.
- There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt

- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments

— the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 a) to check the unrestricted sprawl of large built-up areas;
- 3 b) to prevent neighbouring towns merging into one another;
- 4 c) to assist in safeguarding the countryside from encroachment;
- 5 d) to preserve the setting and special character of historic towns; and
- 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

The plan has failed to consider fully:

Section 2, Achieving sustainable development, Point 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.

Section 3, Strategic policies, Point 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' there appears to have been little assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap.

Section 15, Conserving and enhancing the natural environment, Point 175

NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered.

Agent Organisation	
Yes / No * Yes * No	No
QUESTIONS NPPF comment	<p>Dacorum Green Party supports the need for a local plan and accepts the need to build a reasonable number of new sustainable and affordable properties in the Borough. The latest ONS data available projects 6051 new homes in Dacorum by 2038 – 64% FEWER than this plan projects.</p> <p>The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.</p> <p>Para 20(c) of the NPPF requires ‘sufficient provision for community facilities (such as health)’</p>

. We do not believe The Local Plan has provided such sufficient provision.

We agree with the assessment of other local groups that the NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered which is why we call for every acre of green belt land that is developed an additional 2 acres of green belt land should be rewilded.

The NPPF requires wildlife corridors to be explicitly mapped. They are not in the local plan.

The National Planning Policy Framework (19 February 2019) (NPPF) states: "The Government attaches great importance to Green Belts. The fundamental aim of green belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence (Paragraph 133 NPPF)." Releasing Green Belt land on the scale envisaged in this draft plan ought to be difficult to justify since paragraph 136 of the NPPF is totally clear that: "Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans." The "exceptional circumstances" that could justify release of Green Belt land on such a scale are simply not evidenced in these documents.

Yes / No No
* Yes
* No

QUESTIONS NPPF comment The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

- The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.
- This government policy could be characterised as saying, *'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.'* It is irrational to risk the Green Belt on such an ill-conceived policy.
- The housing need projections based on the most recent data **are about half of the 2014 data** (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.
- It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.
- The council should insist that the government uses the most accurate, and therefore up-to date information to calculate the housing target — not just to change the statistics used to suit their aims.
- Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt
- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt

According to the NPPF:

134. Green Belt serves five purposes:

- a) to check the unrestricted sprawl of large built-up areas;
- b) to prevent neighbouring towns merging into one another;
- c) to assist in safeguarding the countryside from encroachment;

- d) to preserve the setting and special character of historic towns; and
- e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

— There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	It concentrates development in the South East where there is already too much housing, traffic and concentration of population with the resulting problems of water resources, and infrastructure deficiencies as I have previously stated. The pressing national requirement is for levelling up. DCB's plans do just the opposite. There should be greater housing density in other parts of the country to encourage the movement of populations to more peripheral areas resulting in their regeneration.

QUESTIONS NPPF comment	<ul style="list-style-type: none"> Para 11(b) of the NPPF requires 'objectively assessed needs for housing'. The number of houses should specifically meet Dacorum's need for the full range of affordable social housing, as defined in my answer to question 1

- The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB
- Para 20(c) of the NPPF requires ‘sufficient provision for community facilities (such as health)’ there appears to have been no assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap.
- NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered

The proposed wildlife corridors are not explicit or mapped as required by the NPPF.

QUESTIONS NPPF comment

The sites do not meet sustainability assessment requirements as set by Dacorum BC. The sites conflict with Dacorum’s own plan policies.

Bk07 – Lock Field – shown be delisted. It is unsuitable for development.

The infrastructure demands to absorb this population growth have been ignored.

Site design proposals (SPD’s) have not been drafted, so no details what proposed in depth for each site’

Have not considered that “Shootersway” be considered as one overall neighbourhood “community” development – not 7 separate, non-contiguous sites, where separate developer objectives would deliver sub optimal social outcomes.

That the plan to date has insufficiently covered the social isolation impacts of these sites, in particular sites Bk06 and Bk08, and how these sites can best be fully absorbed into the community.

No real attempt, or acceptance of commitments, to finding supporting transport solutions for these new, dispersed sites has been forthcoming, e.g. bus services.

As presented the Draft Local Plan does not address for the existing population how their existing social assets and facilities will be maintained and not overwhelmed.

How, as far as is practical, will existing quality of life standards be protected, maintained, and where shortfalls currently exist that they would be addressed.

will not seek to increase road capacity". (Local Plan paras 21.17 and 23.120 refer)

Attrition against car uses, by resisting road improvement and adding to congestion, makes life difficult for everyone. More congestion, traffic delays, parking problems will impact by default on all - pedestrians, cyclists, bus users, commercial road users et al.

The Draft Local Plan is likely to create a "Catch 22". Wasting resources by tinkering at edge and not addressing crux of the problems,

More car usage is unavoidable, if population / housing is to be expanded. Not expanding and emodelling road infrastructure are not an acceptable alternative.

Dacorum's approach is not in accord with Hertfordshire's Transport Plan (LTP4).

Dacorum's Local Plan is not in keeping with its own attitudes in its Draft Site Sustainability Appraisals and its Draft Infrastructure Delivery Plan. The latter saying for the Shootersway sites.

" Development of this site would likely result in an increase in traffic to and from the site at peak hours, which would have a limited impact upon the local road network. If larger scale growth is proposed in the south west of Berkhamsted, it is likely that this would give rise to further traffic issues along Shootersway, particularly at the junction with the A416/Kings Road and the A41 junction. "

For Darr's Lane, wording is amplified:

"...Development is likely to have an impact on the local road network at peak periods, including along Shootersway and Kings Road/A416. Significant improvements would likely be required, including enhancements to Darr's Lane, Durrants Lane, Berkhamsted High Street, Shootersway, Kings Road and the A416. "

Similar remarks are included in the Draft Infrastructure Delivery Plan (App B) that some of the sites are relatively close to bus transport :

Haslems Field = "Site is a 15-20 minute walk from the frequent 500/501 service

to Watford. The 502 and 532 bus service to Hemel Hempstead is a 10 minute walk and is infrequent in comparison to the 500/501 service. "

arr's Lane = "Site is within walking distance to the frequent 500 bus services to both Watford and Aylesbury. Site is also within walking distance to the less frequent bus service of 532 to Hemel Hempstead.

A site of this scale has the potential to provide new/enhanced public transport connections with the existing town and wider area. "

Sites might be 15-20 minutes walk to access the A4251 and main bus services. BUT Up-hill on way home tired, then time = ??

What about on cold winter days, dark morning and dark evenings??

Equally not easy for young mum with young family in tow during the daytime – particularly on bad weather days. What about infirm etc.

Now add to above, for Darr’s Lane, that for half of the 1.2Km walk to the A4251, the route is single-track, no street-lights, and no pathways.

QUESTIONS NPPF comment	<p>NPPF S11 —</p> <p>— There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.</p> <p>— There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.</p> <p>NPPF - S60</p>

- It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.
- The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.
- This government policy could be characterised as saying, *'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.'* It is irrational to risk the Green Belt on such an ill-conceived policy.
- The housing need projections based on the most recent data **are about half of the 2014 data** (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.
- It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.
- The council should insist that the government uses the most accurate, and therefore up-to date information to calculate the housing target — not just to change the statistics used to suit their aims.
- Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt
- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given thar rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt

According to the NPPF:

134. Green Belt serves five purposes:

- a) to check the unrestricted sprawl of large built-up areas;

- b) to prevent neighbouring towns merging into one another;
- c) to assist in safeguarding the countryside from encroachment;
- d) to preserve the setting and special character of historic towns; and
- e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

— There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	NPPF requires Net Environmental Gain. There is no evidence within the draft plan that this will be addressed. With the elements of the Plan not complying with legislation (e.g. protection of the SAC, which is already subject to adverse impacts from nitrogen levels, air pollution, human pressure leading to tree root compaction, loss of biodiversity, introduction of invasive species, etc), policy guidance and appraisals it follows that there can be no accurate assessment of adverse impacts and therefore no accurate assessment of what is required in the way of Net Environmental Gain. Guesswork in terms of what NEG will be required and whether it can be achieved provides a draft plan that is not fit for purpose.

QUESTIONS NPPF comment	The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	<p>The plan is not consistent with the requirement in the NPPF to build on Green Belt only in exceptional circumstances. Since the plan is based on housing figures which are almost double the 2018 projections, it has not correctly established a need to destroy Green Belt and consider the Chiltern's AONB which is adjacent to Bk06.</p> <p>The Dacorum plan does not provide a valid justification or exceptional circumstances for destroying Green Belt. Rather than minimise use of Green Belt as required, it has maximised it.</p> <p>There is no mention of the existing pollution problems in Northchurch.</p>

Yes / No * Yes * No	No
QUESTIONS NPPF comment	<p>No, the proposed Plan is not consistent with the NPPF, supporting guidance and legal precedent. In particular, the NPPF and legal precedent support greater protection of the Green Belt and caring for the environment than envisaged in the proposed Plan.</p> <p>Para. 133 of the NPPF states clearly that “The government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and permanence.”</p> <p>Para. 134 of the NPPF goes on to say “Green Belt serves five purposes:</p> <ul style="list-style-type: none"> • to check the unrestricted sprawl of large built-up areas; • to prevent neighbouring towns merging into one another; • to assist in safeguarding the countryside from encroachment; • to preserve the setting and special character of historic towns; and • to assist in urban regeneration, by encouraging the recycling of derelict and other urban <p>Para. 136 of the NPPF says “Once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans.” This clause requires evidence, not meeting quotas, in order to alter Green Belt boundaries.</p> <p>Para. 11 of the NPPF makes clear that housing need alone does not constitute “exceptional circumstances”. It says Local Plans should meet housing need unless policies in the NPPF that protect areas or assets of particular importance</p>

provides a strong reason for restricting the overall scale of development, listing Green Belts, AONBs and SACs amongst such “areas or assets”.

Para. 170 of the NPPF says planning policies should enhance the natural environment by “protecting and enhancing valued landscapes” and “recognising the intrinsic character and beauty of the countryside” including recognising the benefits of agricultural land, trees and woodland.

Paras. 174 and 175 of the NPPF state that plans should promote the conservation, restoration and enhancement of priority habitats, and where harm to biodiversity cannot be avoided than planning permission should be refused. Priority habitats are defined in the England Biodiversity List published under section 41 of the Natural Environment and Rural Communities Act 2006 and include chalk rivers.

Para. 15 says that Plans should be succinct. The main sections of this proposed Dacorum Plan total several hundred pages. With the various supporting studies and topic papers, the consultation documentation runs to thousands of pages. This volume of material impedes transparency and makes public scrutiny very difficult.

Dacorum's proposed Plan also uses out-dated data and a flawed algorithm to calculate housing need. Using the most recent 2018 ONS-based housing projections would result in housing need of around 50% or less than that calculated by the Council. This in turn would make unnecessary the release of any Green Belt land for development.

There is also legal precedent for adopted Local Plans not meeting calculated housing need in full due to a variety of constraints, although the Council appears not to recognise this. Examples include -

- Adur, Plan adopted 2017 with 177 dwellings per annum (dw pa) versus Standard method derived target of 453 dw pa
- Birmingham, Plan adopted 2017 with 2555 dw pa versus Standard method derived target of 3577 dw pa
- Bedford, Plan adopted 2020 with 970 dw pa versus Standard method derived target of 1345 dw pa
- New Forest, Plan adopted 2020 with 521 dw pa versus Standard method derived target of 997 dw pa
- Thanet, Plan adopted 2020 with 857 dw pa versus Standard method derived target of 1117 dw pa

The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p> <p>With regard Part b) there is an expectation that the strategy “ optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport” . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).</p>

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	Although the plan's overarching aim is consistent with the NPPF, it fails to make sufficient provision for the conservation and enhancement of natural and historic environment. Piccotts End and Winkwell are historic hamlets at risk of being overwhelmed by the proposed development of surrounding fields. The extensive use of greenbelt land in the plan is inconsistent with conservation of the natural environmental priorities. Although the plan includes provision of infrastructure in the new developments only, the surrounding existing infrastructure will be overwhelmed.

QUESTIONS NPPF comment

- See comments under Question 4 regarding NPPF Paragraph 145

- Paragraph 19.8 refers to NPPF Para 146 as the reason for there being "no necessity to have a detailed coverage of non-strategic policies in the Plan to manage all forms of development in the Green Belt"

This is not the case as there is no policy in this new Local Plan covering equestrian facilities currently being dealt with under saved Policy 81. That policy covers a range of equestrian uses from small scale private stables to commercial liverys that could either come under NPPF Para 146 a) agricultural, if merely horse grazing or 146 b) if being used for riding etc. As there is a significant amount of equestrian activity in the rural parts of the Borough, often on Green Belt

and/or land within the AONB, a local policy is needed to replace saved Policy 81 which seems to have served its purpose very well in controlling such development.

QUESTIONS NPPF comment	NPPF - The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB. Para 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' there appears to have been no assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap. NPPF requires development on Greenbelt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered. The proposed wildlife corridors are not explicit or mapped as required by the NPPF.

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine all other reasonable options for meeting its identified need for development before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p> <p>With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p>

With regard Part b) there is an expectation that the strategy optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plans expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment

The DBC plan is not consistent with the NPPF in many areas, using “exceptional” need of public interest as an excuse not to conform, when in fact these are not “exceptional”, and do not allow the Council to over-ride the constraints. This applies especially to the Green Belt, the Chilterns Area of Outstanding Natural Beauty, the Chilterns Beechwoods SAC, and the AONB. NPPF para 11, footnote 6, allows local authorities to restrict the scale of development due to impacts on the Green Belt and AONB. DBC has chosen to ignore this.

NPPF also requires detailed carbon budgets and committed targets of local carbon reduction to be an integral part of local plan, not as good intentions as in the DBC plan.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy" optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	<p>The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.</p> <p>(27)</p> <p>National Policy and Guidance – Plan isn't consistent with NPPF because it doesn't offer the protection for Green Belt that the NPPF demands and prioritises Green Belt development over brownfield/urban developmen</p>

QUESTIONS NPPF comment	<p>The result is 5,954 homes will be in "greenfield growth areas" which to all but the Council is known as Green Belt and most of it on the outskirts of Berkhamsted and Tring. In arriving at this position the Council have ignored national Planning Policy contained in the NPPF and statements by Ministers including the PM that Green Belt should not be developed except in 'exceptional circumstances'. The Council makes no effort to explain what the exceptional circumstances are in this Borough. The Council's proposals are neither justifiable or sustainable and this is the core of our opposition to this draft Plan. DBC should revert to the Core Strategy vision statement.</p> <p>National Policy and Guidance – Plan isn't consistent with NPPF because it doesn't offer the protection for Green Belt that the NPPF demands and prioritises Green Belt development over brownfield/urban development</p>

QUESTIONS NPPF comment

The draft Local Plan does not meet the Government's objective to significantly boost the supply of homes (NPPF paragraph 59). It is also not consistent with the NPPF due to its failure to include the correct housing requirement figure as calculated using the standard method set out in the national planning guidance (paragraph 60) and does not allocate sufficient land to meet this higher housing requirement for the full Plan period (paragraph 67).

It is therefore key that the Local Plan includes the higher housing requirement as set out using the standard method as its minimum housing target but seeks to allocate sufficient sites to allow for suitable flexibility in the supply to meet this target. As mentioned under Question 2, this should include a variety of sites to support this, whilst also ensuring that a

five-year supply of deliverable housing sites can be demonstrated upon adoption of the Plan in accordance with NPPF paragraph 74. Without these changes, the Plan cannot be considered sound for adoption.

QUESTIONS NPPF comment	<p>I believe that Dacorum should put forward a plan that is for Dacorum not just following guidance from the NPPF which is a central Government body. A local authority should act, represent and stand up for its residents with their own first hand knowledge of the area that they represent. I feel that the Local Plan was put together as a desk top exercise and that Dacorum should visit each and every site BEFORE they include it in the Local Plan. That way I am sure they would realise that many of the comments raised in the Response Forms are totally valid.</p> <p>The sheer lack of knowledge putting forward building houses in BK06, BK07 and BK08 with the very limited and already overused road connections is pure folly.</p>

**QUESTIONS NPPF
comment**

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	We believe that the burden on Tring increase its size by over 50% is not justifiable. Moreover, nobody seems to be able to explain why there has been this move away from Hemel Hempstead taking the brunt of development, with Tring and Berkhamsted taking roughly equal proportions of the remainder, which is no longer the case. Tring's share is grossly disproportionate to the whole, its setting in the foothills of the CAONB is unique.

QUESTIONS NPPF comment	<p>NPPF S11 — — There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting. — There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.</p> <p>NPPF - S60 — It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics. We are concerned the reason for this may be purely for expediency, that is to say – in order to avoid the requirement for local authorities to materially change their plans.</p> <p>— The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a ‘substantial change’ between the most recent projections and the old ones. It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed. Using out-of-date statistics means that the projections are not an ‘objectively assessed need’.</p> <p>— There is not enough effort made to find brownfield land, especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites — The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage. The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.</p> <p>NPPF Section 137 — Not enough thought has been given to options for housing that is not on the Green Belt — The estimation of windfall development is too low, evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided) — it is reasonable to project a higher amount of windfall given the rules on town centre and office developments — the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, talking pressure off the Green Belt According to the NPPF:</p>

134. Green Belt serves five purposes:
 a) to check the unrestricted sprawl of large built-up areas;
 b) to prevent neighbouring towns merging into one another;
 c) to assist in safeguarding the countryside from encroachment;
 d) to preserve the setting and special character of historic towns; and
 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

— Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

61. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

— There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	<p>There are several points on which the Plan is non-compliant with NPPF as regards Tring. The following list is not necessarily a complete one.</p> <p>Para 11(b) of NPPF requires “... objectively assessed needs for housing.. ”</p> <p>The number of houses proposed for Tring is in excess of the number calculated in the September 2020 South west Herts Housing Needs Assessment prepared by GL Hearn.</p> <p>No objectively assessed reason(s) for this given in the Plan.</p> <p>The Plan could be at risk of being determined as being “unsound” for this reason.</p> <p>Para 20(c) of NPPF requires “... sufficient provision for community facilities (such as health.....)”</p> <p>Regarding the combined impact of Tr01, Tr02, Tr03 population increase in Tring, I can find no evidence within the Local Plan document of any assessment of impact on capacity of existing primary care provision in Tring, nor time-scaled provision for additional primary health care facility to bridge the gap.</p> <p>Para 20(d) NPPF requires “... sufficient provision for.... conservation and enhancement of the natural environment including landscapes and green infrastructure.. ”</p> <p>At Tr01, Tr02 and Tr03, whilst the existence of existing and historic field boundary patterns is recognised, there is nothing about their conservation. Many of the hedges in all three areas are over 600 years old as determined by the standard method of number of woody species per 30 metres of hedge length, and as such should be protected by law.</p> <p>Paras 24-27 NPPF requires cooperation across administrative boundaries.</p> <p>Regarding Tr01 and proposal for warehousing, there is no evidence of any discussion with the adjoining Aylesbury Vale District Council regarding the option of using existing industrial/employment land in AVDC at College Road North just 3 miles west of Tring for that warehousing.</p>

Para 123(b) NPPF appears to require housing densities to be given. This has not been done as regards Tr01, Tr02, Tr03.

Para 174 NPPF requires mapping of wildlife corridors and linkages to existing wild/natural areas. I was unable to find evidence of such mapping for Tr01, Tr02, Tr03 within the Local Plan.

**QUESTIONS NPPF
comment**

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine all other reasonable options for meeting its identified need for development before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p>

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “ all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “ optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport” . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	<p>The plan is based on housing calculations using out of date guidance (2014 instead of 2018). The NPPF requires the authority to modify the calculated figures to take account of protecting greenbelt, AONBs and SACs, stating that housing requirements do not supercede protection of those areas. The plan clearly states that it hasn't done this.</p> <p>The framework requires development to be sympathetic with the present character of the environment, the housing figures proposed will change Tring, Northchurch and Berkhamsted fundamentally.</p>

QUESTIONS NPPF comment I DO NOT think the plan is consistent with the NPPF and supporting guidance.

Just a general comment in that bearing in mind, the Government's method of calculating housing need has been discredited, the number of dwellings required within Dacorum should reduce, hence some sections within this document need re-writing for accuracy.

QUESTIONS NPPF comment

- Para 11(b) of the NPPF requires 'objectively assessed needs for housing'. The number of houses should specifically meet Dacorum's need for the full range of affordable social housing, as defined in my answer to question 1
- The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB
- Para 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' there appears to have been no assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap.
- NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately considered

The proposed wildlife corridors are not explicit or mapped as required by the NPPF.

QUESTIONS NPPF comment	NPPF S11 — — There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.

- There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.
- It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014
- The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their
- This government policy could be characterised as saying, *'If we rely on up-to-date accurate evidence, that might mean we have to change our We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.'* It is irrational to risk the Green Belt on such an ill-conceived policy.
- The housing need projections based on the most recent data **are about half of the 2014 data** (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old
- It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively
- The council should insist that the government uses the most accurate, and therefore up-to date information to calculate the housing target — not just to change the statistics used to suit their
- Using out-of-date statistics means that the projections are not an 'objectively assessed need'. — There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that

the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites

- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the

- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum
- Not enough thought has been given to options for housing that is not on the Green Belt
- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 8 provided)
- it is reasonable to project a higher amount of windfall given the rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 to check the unrestricted sprawl of large built-up areas;
- 3 to prevent neighbouring towns merging into one another;
- 4 to assist in safeguarding the countryside from encroachment;
- 5 to preserve the setting and special character of historic towns; and
- 6 to assist in urban regeneration, by encouraging the recycling of derelict and other urban

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

- There are currently over 7000 people on the housing list in That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.
- The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum
- Only 70 our of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the
- The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	There is insufficient evidence of housing need to support the level of development. Full exploitation of brownfield sites for the Local Plan is not fully evidenced. So the Plan fails to meet Section 137 of the NPPF, which specifies the exceptional circumstances that need to exist to justify changes to Green Belt boundaries.

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p> <p>With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p>

With regard Part b) there is an expectation that the strategy ”optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.</p> <p>NPPF - S60</p> <p>— It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics.</p> <p>— The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.</p> <p>— This government policy could be characterised as saying, ‘If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.’ It is irrational to risk the Green Belt on such an ill-conceived policy.</p> <p>— The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a ‘substantial change’ between the most recent projections and the old ones.</p> <p>— It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.</p>

- The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.
- Using out-of-date statistics means that the projections are not an ‘objectively assessed need’.
- There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt

- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given the rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 a) to check the unrestricted sprawl of large built-up areas;
- 3 b) to prevent neighbouring towns merging into one another;
- 4 c) to assist in safeguarding the countryside from encroachment;
- 5 d) to preserve the setting and special character of historic towns; and
- 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.
- Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

— We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities

— There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

— The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

— The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

— Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

— The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment As the level of housing proposed is higher than the most recent ONS data states, there is no justification for building on Green Belt land as there are no exceptional circumstances.

Only 70 houses per year of the proposed 922 are to be allocated for social housing, which is insufficient to meet Dacorum's needs.

QUESTIONS NPPF comment	<p>NPPF S11-</p> <p>There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting. There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.</p> <p>NPPF – S60</p> <p>It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics. The only reason for doing this is that government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans. This government policy could be characterised as saying, ‘If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.’ It is irrational to risk the Green Belt on such an ill-conceived policy. The housing need projections based on the most recent data are about half of the 2014 data (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a ‘substantial change’ between the most recent projections and</p>

the old ones. It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed. The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target – not just to change the statistics used to suit their aims. Using out-of-date statistics means that the projections are not an ‘objectively assessed need’. There is insufficient justification for building on the Green Belt. There is not enough effort made to find brownfield land – especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites. The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 127

Not enough thought has been given to options for housing that is not on the Green Belt

The estimation of windfall development is too low – evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided) – it is reasonable to project a higher amount of windfall given the rules on town centre and office developments

The pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt According to the NPPF: 134. Green Belt serves five purposes:

- 1 To check the unrestricted sprawl of large built-up areas;
- 2 To prevent neighbouring towns merging into one another;
- 3 To assist in safeguarding the countryside from encroachment;
- 4 To preserve the setting and special character of historic towns; and
- 5 To assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

NPPF Section 61 – Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings. Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

We need the right houses, in the right places for local people – the proposed plan seems more likely to meet the need of developers than the local communities

There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need.

The Local Housing Needs Assessment (' LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.

The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents. Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.

The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment

Plan does not comply with the NPPF in several respects, as identified below.

These comments relate specifically to proposals regarding Tring. There may be other parts of the Plan which are also non-compliant with the NPPF.

1 Para 11(b) of NPPF requires '... objectively assessed needs for ..'

The number of houses proposed for Tring is in excess of the number calculated in the September 2020 South West Herts Housing Needs Assessment prepared by GL Hearn.

No objectively assessed reason(s) for this given in the Plan.

The Plan could be at risk of being determined as being 'unsound' for this reason.

- 1 Para 20(c) of NPPF requires '... sufficient provision for community facilities (such as ..)'

Regarding the combined impact of Tr01, Tr02, Tr03 population increase in Tring, there appears to have been no assessment of the impact on capacity of existing primary care provision in Tring, nor time-scaled provision for additional primary healthcare facility to bridge the gap.

- 1 Para 20(d) of the NPPF requires '... sufficient provision for conservation and enhancement of the natural..... environment

including landscapes and green infrastructure. '

At Tr01, Tr02 and Tr03, whilst the existence of existing and historic field boundary patterns is recognised, there is nothing about their conservation. Many of the hedges in all three areas are over 600 years old as determined by the standard method of number of woody species per 30 metres of hedge length, and as such should be protected by law.

- 1 Paras 24-27 of NPPF require cooperation across administrative

Regarding Tr01 and proposal for warehousing, there is no evidence of any discussion with the adjoining Aylesbury Vale District Council regarding the option of using existing industrial/employment land in AVDC at College Road North just 3 miles west of Tring for that warehousing.

Taking that option could generate much more employment in Tring than warehousing by, for example, freeing up land for a residential home.

- 1 The provisions for green/wildlife corridors (especially in Tr01, 02 and 03) are confused and inadequately In particular, the corridors are poorly linked together and do not explicitly protect the hedgerows (including Marshcroft Lane) and the surrounding countryside that are a key part of the character of the area and vital to local biodiversity. Overall, the Plan for Tring falls short of NPPF para 147, and paras 99/100.

- 1 NPPF requires that development on Green Belt land achieves net environmental gain (NPPF para 72c) and is mitigated by compensating development of surrounding natural spaces; there is no evidence that this has been adequately Although considered for NT Ashridge, it is not considered regarding the key 'honey pots' of Tring Park, Stubbings Wood or College Lake.

- 1 Housing densities on Tr01, Tr02 and Tr03 are not stated, despite seemingly being required by NPPF para

- 1 To meet NFFP requirements, 'wildlife corridors' need to be made explicit and mapped (NPPF para174), along with their linkage to existing wild/natural This has not been done in the Plan.
- 1 Policy There is no timescale given for any of the numbers (overall or by site) for the proposed housing sites in Tring, and yet these must exist as the overall growth for Dacorum is profiled by year. Why is this not stated, as required by NPPF para73?

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p> <p>With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p>

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified

QUESTIONS NPPF comment	The draft plan is inconsistent with the duty set out in paragraphs 24 -27 of the NPPF for authorities to co-operate with each other on strategic matters. It is clear that the delivery of sufficient housing to meet the future housing needs of Dacorum is a strategic matter particularly given the location of the Borough in relation to London and its neighbouring

Districts. It is understood that this was recognised by the Council and the adjacent authorities in establishing the mechanism of the South West Hertfordshire Joint Strategic Plan. However it would appear that no meaningful work on that plan has taken place and since March 2020 its working arrangements have been moribund and no work has therefore taken place to fulfil the obligations clearly set out in the NPPF. This is particularly important given that the existing local plan is out of date and itself fails to meet the obligations and policies contained in the NPPF particularly as they relate to the calculation of housing need.

The draft plan is also inconsistent with section 5 of the NPPF, 'Delivering a sufficient supply of homes'. The Plan is not based on a clear, objective assessment of local housing need using the standard method as required by para 60 of the NPPF. This would appear to be recognised by the Council itself at several points within the text of the draft plan. Our preliminary estimate is that the plan significantly underestimates the housing need for which the plan should make provision by up to 30% and that if the plan is to be made consistent with the NPPF additional land for housing needs has to be identified and allocations made.

Although we consider the draft plan to be inconsistent with the NPPF in respect of both the duty to co-operate with neighbouring authorities and the quantum of housing for which the draft plan makes provision, nevertheless in terms of the broad distribution of development we consider that the draft plan is consistent with the NPPF and Government policy in that it seeks to concentrate most development in and around the larger settlements where services and facilities can be accessed by all modes of transport and facilities can be most economically and sustainably provided. In this respect it is considered that the identification of Berkhamsted as one of the settlements where growth is to be concentrated is consistent with that strategy and is sustainable. The town contains a broad range of facilities and services and can be accessed by all transport modes including mainline rail services. Further growth also provides the opportunity to most effectively invest in maintaining and improving facilities as part of a sustainable strategy for the District. In this respect therefore the identification of Berkhamsted as one of the settlements where growth is to be concentrated is strongly supported.

QUESTIONS NPPF comment

NPPF S11 —

- There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting.
- There has been insufficient account taken of objectively assessed It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60

- It does not make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014
- The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans.
- This government policy could be characterised as saying, *'If we rely on up-to-date accurate evidence, that might mean we have to change our plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.'* It is irrational to risk the Green Belt on such an ill-conceived policy.
- The housing need projections based on the most recent data **are about half of the 2014 data** (355 per annum as against 730). The only stated reason for using the old projections as opposed the up-to-date projections, is because there is a 'substantial change' between the most recent projections and the old ones.
- It is unreasonable to say that projections based on statistics chosen precisely because they justify out-of-date-projections rather than more accurate up-to-date projections are objectively assessed.
- The council should insist that the government uses the most accurate, and therefore up-to-date information to calculate the housing target — not just to change the statistics used to suit their aims.
- Using out-of-date statistics means that the projections are not an 'objectively assessed need'.
- There is insufficient justification for building on the Green Belt
- There is not enough effort made to find brownfield land — especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites
- The proportion of social housing is far too low — there are 7000 people currently on the housing register — these are people who qualify for social housing but cannot get it because of the shortage.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137

- Not enough thought has been given to options for housing that is not on the Green Belt
- The estimation of windfall development is too low - evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided)
- it is reasonable to project a higher amount of windfall given the rules on town centre and office developments
- the pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt

According to the NPPF:

- 1 Green Belt serves five purposes:
- 2 to check the unrestricted sprawl of large built-up areas;
- 3 to prevent neighbouring towns merging into one another;
- 4 to assist in safeguarding the countryside from encroachment;
- 5 to preserve the setting and special character of historic towns; and
- 6 to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

- Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

- **We need the right houses, in the right places for local people — the proposed plan seems more likely to meet the need of developers than the local communities**
- There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for The proposed local plan does not meet this need.
- The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing.
- The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.
- Only 70 out of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA.
- The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment

- Para 11(b) of the NPPF requires 'objectively assessed needs for housing'. The number of houses should specifically meet Dacorum's need for the full range of affordable social housing, as defined in my answer to question 1.
- The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.
- Para 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' but there appears to have been no assessment of the impact on capacity of existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap.
- NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces; there is no evidence that this has been adequately considered.

The proposed wildlife corridors are not explicit or mapped as required by the NPPF.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine " all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy " optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport" . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

**QUESTIONS NPPF
comment**

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development// before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “ optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Barkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	Only in part, please see our responses to questions 2, 3, 4, 5, 6 and 7.

The Council notes at paragraph 7.5 that it has progressed the Draft Plan on the basis on a housing need calculation of 922 dwellings per annum (dpa), which uses the method set out within the Government consultation as part of the Planning Reform White Paper (Autumn 2020). The Council acknowledges that there are uncertainties over using this figure and that there may be further changes set out by the Government and that it will be kept under review.

On 16 December 2020, the Government confirmed that councils should use an updated method which takes the original standard method and adds a 35% uplift for boroughs which contain the top 20 largest cities and urban areas (Planning Practice Guidance (PPG) paragraph reference ID: 2a- 004-20201216). This means that the housing need figure for Dacorum will revert back to 1,023dpa:

- The increase from 922dpa to 1,023dpa results in a total requirement of 18,414 homes across the Plan
- This is an increase of 1,818 homes above the 16,596 figure set out within the Draft At present, the Draft Plan contains a supply of 16,899 homes over the Plan Period, only marginally above the DBC's need when using the 922dpa figure.

As such, the DBC will need to update the Plan and find additional sources of housing supply in order to accommodate the higher level of need.

DBC will also need to update its Sustainability Appraisal. Currently, Options A to D are based on a housing target of 922dpa and only Option E considers a higher target of 1,100dpa. Option E does not specify a particular spatial strategy, so this will need to be addressed before the publication of the Regulation 19 Local Plan.

National guidance requires DBC to meet this need in full. There is a historic undersupply of housing in the area and the Council is currently unable to demonstrate a five-year supply of land for housing.

WSP understand that the latest calculation is that DBC can only demonstrate 2.8 years of housing land supply¹. This housing land supply calculation is based on the current housing target of 403dpa. With the emerging housing need of 1,023dpa set to increase this target by over 150%, the Council's housing land supply will fall to an even more critical level.

The 2020 Housing Delivery Test results, published on 19 January 2021, show that there has been a big reduction in housing delivery in DBC. The 2019 results showed that the Council was delivering 138% against its housing requirement but this dropped by 49% to 89% in the 2020 results. We understand that this means that the Council will now have to prepare an Action Plan to show how it will deliver the housing it needs.

Last year, DBC delivered just 522 homes against a target of 938dpa. This target was temporarily reduced by the Government from 1,023dpa, with a month's worth of demand being taken off due to the COVID pandemic. The next results will be based on a requirement of 1,023dpa and will require the Council to substantially increase housing delivery in order to avoid being hit with the requirement to add a 20% buffer to its housing target or face the most severe penalty, the "presumption in favour of sustainable development".

Further, affordability within DBC has worsened significantly over the last 10 years. The ratio of median house price earnings to median gross annual workplace-based earnings has gone up from 7.88 in 2009 to 12.21 in 2019, an increase of nearly 55%².

The issue of worsening affordability shows an acute need for housing placing greater emphasis on the council to exceed its housing requirement. As such, the Council should amend the Plan in order to meet in excess of 18,414 homes over the specified period.

We support Bovingdon as being classified as a “LARGE Village” in the settlement hierarchy and note the contribution that allocated sites within the settlement can make towards providing much needed housing, in a sustainable way.

Our comments relate to the Draft Plan Growth Area Bv02 - Chesham Road and Molyneaux Avenue, which comprises land owned by Homes England.

We can confirm that Homes England are undertaking technical studies of their landholding to support the disposal of the site and ultimately the submission of a planning application for residential development.

The site comprises the adopted housing allocation known as Chesham Road and Molyneaux Avenue (Policy LA6), situated in Bovingdon; south of the main built footprint of Her Majesty’s Prison The Mount (“HMP The Mount”) and Bovingdon Airfield. The north eastern/eastern boundaries are shared with an existing drainage reservoir and beyond that, residential neighbourhood. Residential development also bounds the site opposite at Chesham Road. The site is located on the edge of the built footprint of Bovingdon and was removed from the Green Belt to enable the site’s development. The site currently comprises undeveloped land, formerly Crown Property, associated with HMP The Mount and now owned by Homes England.

The site forms a border with the Green Belt to the north and west and is located wholly in Flood Zone 1, which is the flood zone most compatible with residential development. The site is not located within a conservation area and there are no heritage assets on or in proximity to the site; the nearest designated heritage asset being the Grade II Listed White Hart Cottage, located circa 350m west of the site.

There are three main aspects to our representations, as detailed below:

- Remove restriction to building height;
- Maximise the delivery of the site providing up to 60 homes;
- Landownership and

In summary, our comment on the draft allocation of Growth Area Bv02 is that it is too prescriptive and does not meet the test of soundness by failing to plan positively, artificially limiting the site’s capacity and its ability to contribute to meeting the area’s objectively assessed needs. The policy is inconsistent with national policy which requires plans to positively seek opportunities to meet the development needs of their area and be sufficiently flexible to adapt to rapid change (NPPF 2019, Paragraph 11).

Draft allocation Growth Area Bv02 provides urban design principles to guide the site’s future development. The allocation seeks to limit development on the site to two-storeys in height, based upon the safeguarding zones for the air traffic control navigation beacon at Bovingdon Airfield.

To support this, the Council have published the National Air Traffic Service (‘NATS’) consultation zones for Bovingdon onto the data.gov.uk website here; however, the data is overlaid on an indicative map and the nature of this makes it

difficult to interpret the specific boundary lines of the zones (see Figure 1). The map key is as follows, with coloured zones referring to the scale of development that requires consultation:

- Black star: approximate location of site Bv02;
- Red: any development, above ground level;
- Yellow: any development, over 10m in height; and
- Green: any development, over 15m in height

Figure 1: NATS Consultation Zones in Bovingdon³

The data.gov website comprises the only form of evidence supporting the Council's restriction on development heights; however, this data requests NATS consultation for development of certain heights or above, rather than enforcing a definitive limit on development heights.

Based on the safeguarding zones, confidential pre-application consultation has been undertaken with NATS regarding the proposals for Growth Area Bv02. It was concluded that NATS would not object to the principle of development at the site up to 175m above mean sea level (see confidential **Appendix B**).

To further support the site's redevelopment, in conjunction with advice from the relevant statutory consultee, we request that the allocation wording is amended to remove this limitation on scale. It is an incorrect application of the consultation zone data and, is superseded by the response issued by NATS. The policy wording as drafted is therefore in conflict with Paragraph 35b of the NPPF.

In addition, Figure 1 clearly identifies HMP The Mount as being situated within greater proximity to the beacon and within the consultation zones, yet it is densely developed and to greater heights. A scheme in a growth area should be design and context led, having due regard to consultation that might be necessary with NATS. Further, increasing the development heights will support increased densities.

3 NATS Bovingdon Safeguarding Zones, Dacorum Borough Council (last updated: 20 October 2015)

Due to the proposed draft wording of Growth Area Bv02, the Plan, is not sound, per paragraph 35b of the NPPF, which states that Plans must be justified, based upon proportionate evidence. As established, the current evidence base that this proposal is using comprises an indicative map and that requires the consultation of NATS where developments seek heights above specified thresholds. In order to be found sound, the Draft Plan would have to consider and reflect the recent advice from consultation with NATS in the policy wording for Growth Area Bv02, removing the limitations of two storeys.

Dacorum Borough Council's Site Allocations DPD (adopted July 2017) contains a policy for the Chesham Road / Molyneaux Avenue site (Policy LA6), together with a vision, an indicative spatial layout, and a series of development principles. The allocation identified that the site would deliver 60 new dwellings and open space. The existing allocation (LA6) is proposed for reallocation in the Emerging Strategy for Growth; however, the draft allocation, Growth Area Bv02 – Chesham Road and Molyneaux Avenue, seeks to reduce the capacity of the site by 20 dwellings, to around 40 dwellings (subject to masterplanning) and public open space

There has been no evidence provided to justify this reduction in the site's capacity and in light of the new evidence we present that building height should not be restricted, inter alia the undersupply of housing, there is justification to increase the capacity of the site:

- The gross area of the site is 0ha
- At a reasonable gross density of 30 dpha
- Would suggest a capacity of 60 dwellings (net density of 40 dpha)

This capacity assumes 0.5 ha of POS (inc play space) as per draft Policy DM63.

Retaining capacity on existing, deliverable land allocations, assists the Council in meeting the housing shortfall.

In summary, the Draft Plan's reduction of capacity from 60 to 40 dwellings does not appear to be supported by evidence to justify the amended allocation, nor does it support the Council's undersupply of housing, requiring an additional 1,818 homes be found to support the borough's demand. Therefore, the amended allocation is contrary to Paragraph 35b of the NPPF.

We note that the revised wording for the site's allocation (p.331) suggests:

"Access to be provided from Molyneaux Avenue, with pedestrian access from Chesham Road.

Provide for cycle and pedestrian access to Hyde Lane and Lancaster Drive."

Whilst we understand the benefit of good connections with the existing network, we will be limited by the constraints of landownership and whether the roads are adopted. Therefore, we suggest rewording the proposed text to allow for flexibility, until such time that the feasibility of these connections has been tested through design work. It may also be possible to provide vehicular access from Chesham Road and Lancaster Drive, subject to highway assessment, so this should also be reflected in the next draft version of the Plan.

FLOOD RISK AND DRAINAGE

For clarity the water body referred to as a reservoir is outside of the Homes England's ownership, as per the original allocation and the redline of the proposed reallocation should be adjusted accordingly (see **Appendix C**). Furthermore, this water body should be referred to as an infiltration basin - our technical due diligence suggests that it has also never been used for storage for reuse, but attenuation and discharge via infiltration. The infiltration basin is also under the minimum size (25,000 cubic metres) for it to be designated as a reservoir under the 1975 Reservoir Act.

The Draft Plan seeks to control the flood risk and drainage management at for Growth Area Bv02 in relation to its neighbour, HMP The Mount, and the neighbouring infiltration basin to the east of the site. The site does not comprise the infiltration basin, as clarified in **Appendix C**.

The draft policy states:

"Ensure that drainage infrastructure associated with HMP The Mount and the adjacent holding reservoir for Bovingdon are maintained and where necessary, enhanced."

The use of the word “maintain” suggests two-fold; that the infiltration basin should be kept; and that it should be maintained (i.e. landscaping kept under control / to a certain standard). The basin is not within Homes England’s ownership as per the original allocation, so this commitment cannot be reasonably made.

In seeking to control the maintenance and enhancement of the neighbouring infiltration basin the policy is unsound, contrary to Paragraph 35d of the NPPF. To ensure a sound Plan, the policy wording should be amended, as well as updates made to the Draft Dacorum Infrastructure Delivery Plan (November 2020) to remove reference to off-site works.

The drainage and flood risk required in relation to the new homes will evolve through liaison and engagement with the Lead Local Flood Authority, as standard - the infiltration basin is not required by the development.

No. As per our response at Question 2, the Evidence Base is primarily outdated and unreliable based upon its reliance on outdated housing numbers, as well as its incorrect interpretation of the NATS consultation zones, and the inclusion of HMP The Mount’s drainage infrastructure and infiltration basin within Growth Area Bv02.

The Development Strategy Background Topic Paper (November 2020) is incorrect in its reference to a major constraint of the possible redevelopment at Bovingdon Airfield as the requirement to overcome the “*height restriction associated with the air traffic control (NATS) navigation beacon at Bovingdon Airfield*”. As detailed within our response to Question 5, this is an incorrect interpretation of the data and should be reconsidered in the context of our correspondence and consultation with NATS.

Appendix A of the Urban Capacity Study (incl. Windfall Assessment) (November 2020) is outdated, incorrectly highlighting a larger development area than proposed (**Appendix C**), including the drainage soakaways and infiltration basin associated with HMP The Mount. In addition, it seeks to lower the expected housing delivery to 40 dwellings without technical evidence and contrary to the opinion of the landowner.

Table 75: Bovingdon summary of key infrastructure requirements, of the Draft Dacorum Infrastructure Delivery Plan (November 2020) and the ‘Draft Infrastructure Delivery Plan – November 2020 – Settlement Schedule for Bovingdon, note “*Ensure the drainage infrastructure associated with HMP The Mount and the adjacent holding reservoir for Bovingdon are maintained and where necessary, enhanced (Bv02)*”. It also makes references to the provision of a site of 40 dwellings.

The AECOM site assessments were also each considered against a lower housing need for the Borough, allowing for the discounting of sites which could support the sustainable development of the Council. Further, the Urban Capacity Study (November 2020) estimated capacity within the existing settlements at 10,440 homes, below the level of housing required. The Site Selection Topic Paper (November 2020), interrogates the level of urban capacity available, including existing allocations, commitments, and windfall allowances. Concluding that 10,954 dwellings can be expected to be delivered within the urban areas (note this is slightly different from the number set out within the Urban Capacity Study). This is 7,460 dwellings short of the housing requirement of 18,414 dwellings (based on 1,023dpa).

The issues outlined above with the supporting Evidence Base, in addition to our response to question 2-7, show that in addition to the interpretation of NATS consultation zones, the change in housing requirement has resulted in the need for extensive updates to the Evidence Base and Draft Plan.

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p> <p>With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.</p> <p>With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and</p>

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

**QUESTIONS NPPF
comment**

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt. The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine " all other reasonable options for meeting its identified need for development " before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy " optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport " . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan ' s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

**QUESTIONS NPPF
comment**

This representation has provided a review of the current Dacorum Borough Council Preferred Options Local Plan on behalf of the Trustees of the Gaddesden The Plan is considered to be unsound in its current form and does not accord with national policy. The current plan is considered to be unsound on the basis that the proposed allocations of sites HH01 and HH02 are not the most appropriate allocations when considered against the alternatives.

Policies HH01 and HH02, which relate to the proposed Garden Communities are considered to be unsound for the following reasons:

- HH01 and HH02, along with the proposed urban extensions to Berkhamstead and Tring, place a significant reliance on large strategic sites to deliver the vast majority of the housing requirements for the plan period. This creates a number of issues, including a lack of completion for market housing, over- saturation of housing and employment in a very limited number of locations. The plan is also not currently meeting the NPPF requirement to allocate a substantial proportion of small and medium sized sites to meet Dacorum’s housing land. HH01 and HH02 also place an over reliance on Hemel Hempstead for housing delivery, which should be more evenly distributed
- HH01 and HH02 are located immediately adjacent to the Chiterns AONB. In accordance with paragraph 71 and 172 of the NPPF, development should be situated away from the AONB. It is unclear why North Hemel has been selected above alternative sites to the south of the Borough, which could be allocated without impacting upon the AONB. The allocations of HH01 and HH02 have also not fully considered visitor pressure on the AONB
- HH01 and HH02 will require substantial new infrastructure, including a new bypass, which raise significant deliverability issues. The south side of Hemel Hempstead benefits from significantly improved transport connectivity to the A41 and M25 and it is not clear why HH01 and HH02 have been chosen above alternative options in this regard.
- The housing figures used to calculate demand for housing, are based on out of date ONS figures and the plan has also not provided an assessment of Covid-19, which could free up additional employment floor space for residential development.
- The proposed development has the potential to have a carbon footprint and it is very important that the full environmental impact of the development is fully assessed

Notwithstanding our view that HH01 and HH02 should be removed as allocations from the Local Plan, in the event that HH01 and HH02 are retained within the plan, it is imperative that the current policy wording is amended in order to give suitable protection to the AONB, neighbouring receptors and the setting of nearby listed The suggested changes are set out within section 3 of this representation.

**QUESTIONS NPPF
comment**

No, due consideration has not been given to policies which protect assets such as green belt and AoNB.

Objectively Assessed Need

The National Planning Policy Framework requires that all planning authorities prepare Local Plans to provide housing which meets their objectively assessed need.

1 Plans and decisions should apply a presumption in favour of sustainable development.

For plan-making this means that:

(a) plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change;

(b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas 5 , unless:

(i) the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area 6 ; or

(ii) any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.

NPPF section 11

Section 60 of the NPPF suggests that the housing need is set by the standard method. However, the housing figure from the standard method for Dacorum has changed during the course of this consultation.

1 To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for.

NPPF section 60

In November 2020 Dacorum had a standard method ‘housing target’ of 922 dwellings per annum. This was based on the most recent Office for National Statistics (‘ONS’) housing need projections, (355 per year averaged over the next ten years for Dacorum) and uplifted by an algorithm which placed import, not only on housing affordability, but also on the change in housing affordability in the last ten years. This resulted in a multiplier applied to the ONS projected need of 2.6, and overall housing target of 922 dwellings per annum.

In December 2020, Government announced that it would no longer be using this method to calculate the housing target and that it would revert to an earlier affordability algorithm. This algorithm limited the uplift from ONS figures to 1.4 x

ONS figures. With the latest ONS figures suggesting that Dacorum would need 355 dwellings per year this would provide a housing need figure of around 500 dwellings per annum. However, rather than use the latest projections, Government announced that it would instead revert to the 2014 projections.

‘We will continue to use the 2014-based household projections. The government has carefully considered whether to use the 2018-based household projections and has concluded that, due to the substantial change in the distribution of housing need that would arise as a result, in the interests of stability for local planning and for local communities, it will continue to expect only the use of the 2014-based projections.’

Government response to the local housing need proposals in ‘Changes to the current planning system’

As the latest housing need projections for Dacorum are around half the 2014 ones (355 vs 730)

using out of date 2014 projections results in a ‘housing target’ figure for Dacorum of 1023 dwellings per annum. It is specifically stated that the reason for using the old projections is because there is a ‘substantial change’ between the old projections and the most recent ones.

Therefore, it is self-evident that the housing target produced by the standard method cannot be accurately described as an objectively assessed need.

We urge the Council to request of Government, that the best information available be used to calculate our housing target. That is, the most recent ONS figures, and the standard method (which limits uplift to a multiplier of 1.4).

If Government does not agree to alter the Standard Method across the country to reflect more recent trends, the NPPF section 60 allows for planning authorities to set their own housing need under ‘exceptional circumstances’.

It is our view that the fact that the target figure set by using the 2014 projections is not in any way an ‘objectively assessed need’, combined with the fact that providing for over double the actual required need would fundamentally fly against the UKs 2050 net zero commitment, provides this exceptional circumstance to apply an alternative approach to calculating the housing need.

It is our considered view that as such, DBC should use the latest housing projections, along with the original standard method to calculate its housing need, and update this local plan to provide for a 9,000 homes over 18 years.

Protected areas

If the housing target provided by the current standard method and old ONS projections must be used, it is clear from the NPPF and the recent release from MHCLG that this target is considered only a starting point.

11 b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless:

- 1 the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or
- 2 any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.

NPPF section 11

‘Many respondents to the consultation were concerned that the ‘targets’ provided by the standard method were not appropriate for individual local authority areas. Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt.’

Government response to the local housing need proposals in ‘Changes to the current planning system’

On top of this, it is worth noting that the reasons given by MHCLG for rejecting the complex housing algorithm (which for Dacorum gave a target figure of 2.6 x the ONS projected housing need) focused on the pressure on rural areas and Green belt.

‘In particular, we heard that too much strain was being put on our rural areas and not enough focus was on the renewal of our towns and cities.’

‘in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.’

Government response to the local housing need proposals in ‘Changes to the current planning system’

In the emerging local plan, which uses the figure of 922 dwellings per year, it is proposed that over 750 hectares of Green belt be released and allocated for housing. If the figure of 1023 dwellings per year were used, it can only be assumed that pressure on green belt would be even greater. Great import is attached to preserving Greenbelt in the NPPF.

- 1 The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.

NPPF section 133

It is also clear from the NPPF that the release of green belt can only be considered in ‘exceptional circumstances’.

- 1 Once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans. Strategic policies should establish the need for any changes to Green Belt boundaries, having regard to their intended permanence in the long term, so they can endure beyond the plan period. Where a need for changes to Green Belt boundaries has been established through strategic policies, detailed amendments to those boundaries may be made through non-strategic policies, including neighbourhood plans.

NPPF Section 136

We consider that meeting a housing target which cannot be accurately described as an 'objectively assessed need' does not qualify as an 'exceptional circumstance' in which Green belt may be released.

Furthermore, even where exceptional circumstances apply, green belt may only be released as a last resort.

- 1 Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:
 - 2 a) makes as much use as possible of suitable brownfield sites and under utilised land;
 - 3 b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and
 - 4 c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.

NPPF Section 137

We do not consider that all other options for housing have been appropriately considered in this local plan. For example, the windfall figure which is provided for in this plan is 133.8 per year. In the last fourteen years the windfall figure has been 306.2 per year on average (346 per year over the last five years). The figure for this plan period is therefore far lower than could be reasonably expected. However, permitted development rules have been widened significantly, and now include the potential to increase the height of buildings, adding flats on top of blocks of flats and adding flats on top of shops. This will likely mean that windfall figures will if anything, increase. On top of this, the pandemic is expected to cause a shift away from office space for businesses in favour of more flexible working practices and this is likely to free up more brown field space within towns all over the country, thereby taking pressure off green field and green belt sites.

According to the NPPF:

- 1 Green Belt serves five purposes:
 - 2 a) to check the unrestricted sprawl of large built-up areas;
 - 3 b) to prevent neighbouring towns merging into one another;
 - 4 c) to assist in safeguarding the countryside from encroachment;
 - 5 d) to preserve the setting and special character of historic towns; and
 - 6 e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61

There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have asked for it. This need is not being met adequately through this plan. The Local Housing Needs Assessment ('LHNA') for South West Herts estimated that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing. Whilst this figure may also be impacted to a certain extent by the expected decrease in growth which has caused the ONS projections for our area to reduce from 730 to 355 dwellings per year, the current need is still large.

It is our view that the Local Plan does not include sufficient allocations for affordable, or in particular social housing for the needs of Dacorum residents. Of the 922 dwellings proposed per year only 70 per year are expected to be social housing, as compared to the need for 315 social dwellings per year from the LHNA. We would like to see a third of housing delivered in Dacorum be social rented housing. A large proportion of the housing envisioned in this plan will not be affordable for our residents, but is rather aimed at London commuters, and this will do nothing to improve the affordability of housing in Dacorum.

QUESTIONS NPPF comment

The need for housing at this level is not justified because it exceeds recommended development by 600 houses a year.

Are brownfield sites being fully exploited? If not then there is no justification to change Green Belt boundaries.

**QUESTIONS NPPF
comment**

A. Paragraph 11 of the National Planning Policy Framework states :

“The presumption in favour of sustainable development.

Plans and decisions should apply a presumption in favour of sustainable development.

For plan-making this means that:

- 1 *plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change;*
- 2 *strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless:*
 - *the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or*
 - *any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.”*

I have stated elsewhere that I remain unpersuaded on the assumptions made that lead to the number of dwellings proposed to be built in the Dacorum Borough Council area over the period of the Local Plan.

There is an assumption in the Draft Plan that there is demonstrable benefit that outweighs the disbenefits of the proposed release of land from the Green Belt. I dispute that this is the case. In Berkhamsted and Northchurch, sub paragraphs i) and ii) should take precedence and be applied in order to protect the local area.

Comments such as “sustaining vibrancy” etc are not accompanied by evidence to support the argument. Maintaining supply and delivery

Paragraph 73 of the NPPF includes the comment: *“Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years’ worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old”*.

This invites the question on what is the appropriate number of dwellings to satisfy the local housing need: arguably in Dacorum, the need is for dwellings at ‘affordable cost’ or ‘social rent’. The footnote 37 on page 20 of the NPPF states:

“Where local housing need is used as the basis for assessing whether a five year supply of specific deliverable sites exists, it should be calculated using the standard method set out in national planning guidance”.

This introduces a contradiction and confuses open market housing *supply* with housing *need*. It leads to a further increase of dwelling numbers, in excess of what the ONS data is projecting, and locally, to significant demand for Green Belt land release beyond the level that the local urban areas have the capacity to accommodate.

The strategic policy adopted in 2013 set an annual requirement of 430 dwellings per annum; the ‘local housing need’ may be greater than this number, but even so that is larger than the number projected from the 2018 ONS data.

B Green Belt – releases

The Draft Local Plan sets out to meet the stated number of dwellings as required or calculated by the ‘standard method’ determined by the Ministry of Housing, Communities and Local Government with a modest buffer.

Paragraphs 19.6 and 19.7 of the Draft Plan make reference to Para 136 of the NPPF viz:
(see attachment)

As a point of order, until the adoption of the Draft Plan, the final sentence should read: “It is *proposed to release* Green Belt land to enable the delivery of the spatial strategy for Dacorum” (my italics)

Paragraph 137 of NPPF states:

“Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development.

This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:

- 1 makes as much use as possible of suitable brownfield sites and underutilised land;*
- 2 optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and*
- 3 has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common*

I note that the 2017 consultation identified ‘urban capacity’ as 10,940 dwellings. Experts shall not doubt argue the technical aspects of a) and b) but as I have noted elsewhere, I cannot agree with the statement that “the site locations selected for Berkhamsted (and Northchurch) can be considered as ‘*other locations well served by public transport*’ (sub- paragraph b) above.

QUESTIONS NPPF comment	It remains unclear how the proposed developments would meet the various guiding development policies including climate change and sustainability. The reasoning provided is aspirational, unconvincing and lacks a credible and detailed implementation plan. In particular, it remains unclear how and by whom the costs of providing for infrastructure and other investments would be met. These details must be clarified before the moving to the pre-submission stage.

**QUESTIONS NPPF
comment**

There has not been enough consideration of areas of AONB and Green Belt, which are highly valued by local residents as well as visitors from more densely populated areas who enjoy visiting. There has been insufficient account taken of objectively assessed need. It is clear that the plans to release much valued Green Belt land will have a significant adverse affect, which has not been justified by objectively assessed need.

NPPF - S60 — to say it doesn't make sense that the most recent statistics from the Office of National Statistics (ONS) have been disregarded in favour of out-of-date 2014 statistics is an understatement! It's ludicrous. The only reason for doing this is that the government realised that if it used up-to-date statistics, then many local authorities would have to materially change their plans. We would rather do what suits us, than rely on the evidence, even if it means destroying the Green Belt.'

It is irrational and nonsensical to risk the Green Belt on such an ill-conceived policy.

The council should insist that the government uses the most accurate, and therefore up-to date information to calculate the housing target. There is not enough effort made to find brownfield land, especially as it is anticipated that the impact of the pandemic will be to free up a lot of the commercial properties in the brownfield sites.

The proportion of social housing is far too low — there are 7000 people currently on the housing register. These are people who qualify for social housing but cannot get it because of the shortage. The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents.

NPPF Section 137 — Not enough thought has been given to options for housing that is not on the Green Belt. The estimation of windfall development is too low. Evidence of recent years suggests a higher amount (346 per year rather than the 133.8 provided). It is reasonable to project a higher amount of windfall given thar rules on town centre and office developments. The pandemic has led to more flexible working and this is likely to mean businesses move away from urban centres, taking pressure off the Green Belt According to the NPPF: 134. Green Belt serves five purposes: a) to check the unrestricted sprawl of large built-up areas; b) to prevent neighbouring towns merging into one another; c) to assist in safeguarding the countryside from encroachment; d) to preserve the setting and special character of historic towns; and e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134 — Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic. Social housing need in Dacorum Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings. Within this context, the size, type and

tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).

NPPF Section 61 — We need the right houses, in the right places for local people. The proposed plan seems more likely to meet the need of developers than the local communities. There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have applied for it. The proposed local plan does not meet this need. The Local Housing Needs Assessment ('LHNA') for South West Herts estimates that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing. The Local Plan does not include sufficient allocations for affordable, or social housing for the needs of Dacorum residents. Only 70 of the 922 dwellings per year are expected to be social housing, compared to the need for 315 social dwellings per year from the LHNA. The developer led housing in this plan is aimed at meeting the demand for London commuter belt housing, rather than the local housing need of our own communities.

QUESTIONS NPPF comment	<p>The Campaign for the Protection of Rural England (CPRE) Hertfordshire's states that Dacorum's Plan is not consistent with the NPPF as it does not take account of such constraints as Green Belt and AONB when calculating housing need.</p> <p>"We do not believe that the Plan is consistent with the NPPF. DBC state that they aim to "minimise" development on Green Belt land and the impact on the Chilterns AONB. We believe that DBC have ignored this aim in order to meet an unnecessary and inflated housing target that they themselves have chosen. The proposed developments in Northchurch are Green Belt and the Darrs Lane site borders the Chilterns Area of Outstanding Natural Beauty."</p> <p>Dacorum "are not obliged by the NPPF to prioritise housing targets over environmental or other concerns: paragraph 11, footnote 6 allows Dacorum to restrict the scale of development due to other planning constraints such as the impact on the Green Belt and AONB. In our view, the failure to do this means that their proposals are not consistent with the NPPF."</p> <p>The 'places vision', emphasises growth over all other considerations and does not reflect the aspirations of local people. Northchurch Parish Council has many formal and informal consultations with residents about what is important to them. In line with their views, our published mission is to make Northchurch "a safe, healthy and vibrant community by:</p> <ul style="list-style-type: none"> • Helping local people to improve their physical health and mental wellbeing • Making our roads safer • Protecting and improving access to the Green Belt and other open spaces • Preserving the environment and increase biodiversity • Preserving the historic identity of Northchurch • Being open and accessible, and engage local people in decision making"

<https://www.northchurchparishcouncil.gov.uk/>

All our work is focussed on achieving these aims. For example, we have a 5-year project to increase biodiversity by changing a 400m stretch of closely mown verge into a wildflower verge. We are carrying out a major project to improve play and exercise facilities at our recreation ground. We have set up a committee dedicated to improving road safety. These efforts will be undermined by the loss of so many acres of Green Belt. By over-emphasising growth, the 'places vision' meets neither the aspirations nor the concerns of Northchurch residents.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and underutilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are

non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment A I note the statements in the NPPF Para 11:
“The presumption in favour of sustainable development.

Plans and decisions should apply a presumption in favour of sustainable development.

For plan-making this means that:

- a) plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change;
- b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless:
 - i. the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or
 - ii. any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.”

I have previously said I remain unpersuaded on the assumptions made that lead to the number of dwellings proposed to be built over the Plan period. There is an assumption in the Draft Plan that there is demonstrable benefit that outweighs the disbenefits of the proposed release of land from the Green Belt. I dispute that this is the case certainly around Berkhamsted and Northchurch where sub para i and ii should take precedence and be applied.

Comments such as sustaining vibrancy etc are not accompanied by evidence to support the argument.

B Maintaining supply and delivery

Para 73 includes the comment: Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years' worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old.

This invites the question on what is the appropriate number for the local housing need: in this Borough the need is for dwellings at 'affordable cost' or 'social rent'. The footnote 37 [Page 20] states:

Where local housing need is used as the basis for assessing whether a five-year supply of specific deliverable sites exists, it should be calculated using the standard method set out in national planning guidance.

This introduces a contradiction and conflates open market housing supply with housing need. This leads to a further increase of dwelling numbers, in excess of what the ONS data is projecting, and locally, to significant demand for Green Belt land release beyond the urban capacity.

The strategic policy adopted in 2013 sets an annual requirement of 430 dpa; the 'local housing need' may be greater than this number, but even so that is larger than the number projected from the 2018 ONS data.

C Green Belt – releases

The Draft Plan sets out to meet the stated number of dwellings as required or calculated by the 'standard method' determined by the Ministry, with a modest buffer. Para 19.6 and 19.7 of the Draft Plan make reference to Para 136 of the NPPF viz:

Until the adoption of the Draft Plan, the final sentence should read:

It is proposed to release Green Belt land to enable the delivery of the spatial strategy for Dacorum.

First Dacorum has to 'prove beyond doubt' that "exceptional circumstances" exist to allow the release of Green Belt, which Berkhamsted Citizens remain vehemently opposed to.

F Para 137 says:

Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development.

This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:

- a) makes as much use as possible of suitable brownfield sites and underutilised land;
- b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and
- c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.

I note the 2017 consultation identified Urban Capacity as 10,940 dwellings. I shall leave it to others to determine the technical aspects of a) and b) but I cannot agree that the site locations selected for Berkhamsted [and Northchurch] can be considered as 'other locations well served by public transport'.

I look forward per sub para c) to learning whether discussions with neighbouring authorities prove fruitful.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine “all other reasonable options for meeting its identified need for development” before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment

- Para 11(b) of the NPPF requires 'objectively assessed needs for housing'. The number of houses should specifically meet Dacorum's need for the full range of affordable social housing, as defined in my answer to question
- The plan has failed to take account of Para 11, footnote 6 of the NPPF which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and
- Para 20(c) of the NPPF requires 'sufficient provision for community facilities (such as health)' there appears to have been no assessment of the impact on capacity of

existing primary care provision, nor time-scaled provision for additional primary healthcare facilities to bridge the gap.

- NPPF requires development on Green Belt land achieves net environmental gain and is mitigated by compensating development of surrounding natural spaces, there is no evidence that this has been adequately

The proposed wildlife corridors are not explicit or mapped as required by the NPPF.

**QUESTIONS NPPF
comment**

Insufficient consideration has been given to policies which protect assets such as green belt and AoNB. This is not based on the NPPF's requirement that the Local Plan is based on objectively assessed need. Section 60 of the NPPF requires housing need to be based on a local housing need assessment which then sets a housing level through the standard method. However, the standard method is based on flawed and redundant data (2014 ONS data) rather than more recent 2018 ONS data. More recent evidence of population changes brought about by Covid and Brexit are also ignored. So, the release of Green Belt is not evidenced to be required by exceptional circumstances, as required by NPPF section 133 and 136.

There is insufficient evidence that the Local Plan meets Section 137 which states that before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:

- 1 makes as much use as possible of suitable brownfield sites and under utilised land;
- 2 optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and
- 1 has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.

NPPF Section 61 requires "the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies", yet there is insufficient evidence that the housing proposed in the Local Plan meets the needs of the 7000 people who meet the criteria for council or housing authority housing and who have asked for it. The Local Housing Needs Assessment (LHNA) for South West Herts estimated that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing. The Local Plan does not meet these needs.

The Local Plan does not include sufficient allocations for affordable, or in particular social housing for the needs of Dacorum residents. Of the 922 dwellings proposed per year only 70 per year are expected to be social housing, as compared to the need for 315 social dwellings per year from the LHNA. We would like to see a third of housing delivered in Dacorum be social rented housing. A large proportion of the housing envisioned in this plan will not be affordable for our residents, but is rather aimed at London commuters, and this will do nothing to improve the affordability of housing in Dacorum.

QUESTIONS NPPF comment	It concentrates development in the South East where there is already too much housing, traffic and concentration of population with the resulting problems of water resources, and infrastructure deficiencies as I have previously stated. The pressing national requirement is for levelling up. DCB's plans do just the opposite. There should be greater housing density in other parts of the country to encourage the movement of populations to more peripheral areas resulting in their regeneration.

QUESTIONS NPPF comment	Due consideration has not been given to policies which protect assets such as the Green Belt and Chilterns AONB. Nor does the Plan provide housing which meets the area's objectively assessed need. The nationally-imposed target does not provide justification for releasing Green Belt land, which may be done only in "exceptional circumstances" and as a last resort.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield

sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a

significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and

Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan’s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	Our client considers the draft Local Plan to be broadly consistent with the NPPF and supporting guidance. We urge the Council to ensure the next iteration of the Local Plan is as robust as possible to ensure it satisfies all of the soundness tests (positively prepared, justified, effective and consistent with national policy) in accordance with paragraph 35 of the NPPF. It is acknowledged that the next iteration of the Local Plan made need to reflect the Government's latest NPPF and National Model Design Code: consultation proposals which is currently live.

**QUESTIONS NPPF
comment**

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine " all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy " optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport" . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan' s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment

The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine "all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy “optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport”. There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

QUESTIONS NPPF comment

Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, I have serious concerns regarding the sheer scale of proposed development.

The Council has failed to take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6 which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and AONB.

I also acknowledge that recent Government guidance on calculating housing need has been, at best, confusing. I strongly believe that housing needs should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. The Council has based its calculations on the outdated 2014 based ONS

data which, in my opinion, would result in a significant overestimate of housing and brings into question the soundness of any local plan based on them.

QUESTIONS NPPF comment	<ul style="list-style-type: none"> • Along with national policy as set out in the NPPF (referenced above) the Strategy Document also makes reference to the recent Planning White Paper. The document identifies some steps have been included to reflect some of the proposals including: <ul style="list-style-type: none"> • Introducing the simplified zoning categories; and • Strengthening local design policies and guidance <p>There has been no further detail following the Planning White Paper consultation and, at present, the approach reflecting certain aspects of this (as set out above) is appropriate and is supported.</p> <p>In terms of national policy on truckstops, the NPPF is clear that <i>“Planning policies and decisions should recognise the importance of providing adequate overnight lorry parking facilities, taking into account any local shortages, to reduce the risk of parking locations that lack proper facilities or could cause a nuisance (paragraph 107)”</i>.</p> <p>The provision of truckstops is also addressed by the Department of Transport Circular 02/13 The Strategic Road Network and the Delivery of Sustainable Development which sets out the national policy context for roadside facilities. It is clear that the primary function of roadside facilities is to support the safety and welfare of the road user, which maintains the effectiveness and efficiency of the strategic road. Truckstops provide an important road safety function and allow HGV drivers to take statutory breaks. The Circular also specifies the mandatory parking provision for different types of roadside facilities, including truckstops. This is discussed further at Section 6.</p> <p>The Hertfordshire Local Transport Plan also recognises the need to manage freight and logistics (Policy 16) which includes support for improvements in HGV provision in the county, including overnight parking, in appropriate locations.</p> <p>In addition to the policy context, there is further evidence prepared by both Highways England and Hertfordshire County Council, important statutory partners responsible for the delivery of provision of infrastructure for freight, which plays a vital role in the UK economy.</p> <p>As set out within the Vision Document in Appendix 1, The Department for Transport has attempted to increase lorry parking facilities for some time. They published a National Survey for Lorry Parking in 2017, which identified the East of</p>

England (in which Dacorum is located) as one of the most critical regions in need of additional HGV parking with the majority of truckstops full and at capacity, including Watling Street Truckstop.

Hertfordshire County Council in conjunction with Hertfordshire Local Enterprise Partnership (LEP) has also sought to overcome issues relating to HGV parking issues arising at the Maylands Business Park. They commissioned AECOM to identify transport infrastructure needs. This report identified that there are HGV parking issues, including parking on local roads, with no facilities, causing disruption to traffic. It is understood, anecdotally, that policing the parking of HGVs is difficult as there is no alternative parking solution for the vehicles at present. The report goes on to say that Watling Street Truckstop is very busy and at certain times is full. Given the close proximity of the truckstop to Maylands, one of the key recommendations (A2) of the report is to consider the expansion of Watling Street Truckstop.

As highlighted above, the national and local policy context and evidence acknowledges the shortfall within the vicinity and, hence, land use policies proactively driving proposals for HGV parking are supported as further set out in these representations.

QUESTIONS NPPF comment	As noted in Section 1 above, the Plan appears to place housing need above almost all other considerations. That is a misreading of paragraph 11 of the NPPF, which requires objectively assessed housing need to be met " <i>unless the application of policies in [the NPPF] that protect areas or assets of particular importance provides a strong reason for restriction the overall scale, type or distribution of development in the plan area; or any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole</i> ".

The other policies of the NPPF do in fact outweigh the housing need requirements. The Plan appears to conflict with at least to the following policies of the NPPF:

- Paragraph 102, which requires the Council to ensure "*appropriate opportunities to promote sustainable transport modes*"; in planning dormitory sites around the outskirts of towns, the Plan does not comply with this
- Paragraph 103, which requires "*significant development [to] be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes*" (See also paragraph 104 requiring assessment of "*the environmental impacts of traffic and transport infrastructure*".)

Paragraph 136, requiring amendment to Green Belt only in "*exceptional circumstances*"; in planning extensive building on areas of Green Belt which have been found by independent consultants to fulfil the Green Belt purposes (NPPF, paragraph 134), such exceptional circumstances are not demonstrated.

- Paragraph 148, requiring planners to "*support the transition to a low carbon future in a changing climate*" and to "*shape places in ways that contribute to radical reductions in greenhouse gas emissions*": in planning dormitory sites around the outskirts of towns, the Plan does not comply with this requirement.
- Paragraph 172, which requires "*great weight*" to be given to conserving and enhancing landscape and scenic beauty in Areas of Outstanding Natural Beauty: in planning sites which are recognised to impact on the Ashridge AONB due to their visibility from the site, the Plan does not comply with this requirement.
- Paragraph 174, which requires the Council to "*promote the conservation, restoration and enhancement of priority habitats*" and paragraph 175(c), which requires the Council to avoid "*development resulting in the loss or deterioration of irreplaceable habitats (such as ancient woodland and ancient or veteran trees) should be refused, unless there are wholly exceptional reasons*"; these policies are put in jeopardy by the proposed development of areas involving mature trees, ancient hedgerows and natural habitats.
-

Given the changes resulting from the pandemic, as well as from population changes post Brexit, the injunction in paragraph 11 of the NPPF that plans should "*be sufficiently flexible to adapt to rapid change*" also appears paramount. There is little evidence of any real flexibility in the Plan if it is adopted.

QUESTIONS NPPF comment	There are grave and fundamental problems with the proposed plan. Inter alia, these result from an apparent misunderstanding by DBC of its obligations, under the NPPF to satisfy housing need. DBC seems to have concluded that meeting housing need is a paramount obligation, which trumps all other considerations and obligations under planning law. This is simply not the case. This misunderstanding has profound implications for the soundness of policy SP2, and the proposed local plan as a whole.

QUESTIONS NPPF comment	<p>It should be clear from the above that there are serious inconsistencies with / breaches of the NPPF in the proposed plan. In particular, the plan is inconsistent with:</p> <ul style="list-style-type: none"> • The policy regarding the Green Belt, contained in chapter 13 of the NPPF, which provides that “<i>Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified</i>” (paragraph 136). It is very doubtful whether mere housing need can amount to exceptional circumstances for these purposes. Moreover, there must be substantial doubt about the validity of the housing need figure which has been used, not least because of recent and dramatic population changes that pre-date the ONS statistics used as the basis for determining housing need. • The policy regarding Areas of Outstanding Natural Beauty, contained in chapter 15 of the NPPF, which provides that “<i>great weight should be given to conserving and enhancing landscape and scenic beauty in ... Areas of Outstanding Natural Beauty, which have the highest status of protection</i>” (paragraph 172). Many of the development proposals would have a serious adverse impact on the Chilterns AONB. • The policy regarding habitats and biodiversity, also contained in chapter 15 of the NPPF, which provides that “<i>development resulting in the loss or deterioration of irreplaceable habitats ... should be refused, unless there are wholly exceptional reasons</i>” (paragraph 175(c)). Inter alia, the proposed housebuilding programme would result in additional abstraction of water from local chalk aquifers – on which the borough’s chalk streams, a rare and vulnerable natural habitat, are dependent. The plan indicates an intention to manage this issue but the required detail on how this will be achieved is missing.

QUESTIONS NPPF comment	<p>The spatial strategy does not accord with the settlement hierarchy. There is an overreliance on the Urban sites (to deliver 73% of the total housing to 2038) and an overly aspirational rate of delivery from them. This is a high-risk strategy, and contrary to national policy that requires new housing to be made available for affordable home ownership to meet identified needs (NPPF 64 and 65). A strategy for Hemel Hempstead town that relies disproportionately upon the delivery of brownfield land to 2038 runs the risk of not meeting identified housing needs in a sustainable way.</p> <p>It is also evident that the distribution of the main strategic greenfield allocations does not reflect the Council's settlement hierarchy. Phase 1 of HGC is the only new greenfield allocation (1500 dwellings within the plan period) with the major greenfield growth at Berkhamstead and Tring (tier 2 settlements) capable of delivering at least 1,730 and 2,274 units respectively within the plan period. This runs the risk of a significantly low proportion of affordable homes being delivered at the most sustainable settlement.</p> <p>Tested against NPPF 139, the proposed safeguarding of land from the Green Belt to meet longer- term development needs beyond the plan period is noted. The first half of the draft plan appears to follow that approach. However, the second part, namely the site-specific proposals and the delivery strategy for HGC seeks to allocate the safeguarded land for development of 4,000 homes under Site HH02 in Policy SP15. The Housing Topic Paper suggests this is necessary to assist with the Councils Infrastructure finding bids from Central Government [Footnote 3 Para 7.37 and 7.38 of the DBC Housing Policy Topic Paper, November 2020]. NPPF 139 (d) makes it clear that safeguarded land should not be allocated until it is required and should then be considered for allocation in a future plan period. The draft Plan conflicts with the NPPF.</p> <p>The Plan includes development within the AONB which is recognised in NPPF 172 as having the 'highest status of protection'. The evidence concludes that there are sufficient sites outside of the AONB that could come forward (as recognised through the SA process) such that it may not be necessary to allocate growth in the AONB to meet future needs. Further justification is required to set aside this policy constraint and allocate major growth in the AONB in favour of sites in equal or potentially more sustainable locations.</p> <p>Generally, the need to release Green Belt land (a planning, not a landscape constraint) has been justified and the NPPF is met in this regard.</p>

QUESTIONS NPPF comment	<p>The Campaign for the Protection of Rural England (CPRE) Hertfordshire states that Dacorum’s Plan is not consistent with the NPPF as it does not take account of such constraints as Green Belt and AONB when calculating housing need. “We do not believe that the Plan is consistent with the NPPF. DBC state that they aim to “minimise” development on Green Belt land and the impact on the Chilterns AONB. We believe that DBC have ignored this aim in order to meet an unnecessary and inflated housing target that they themselves have chosen. The proposed developments in Northchurch are Green Belt and the Darrs Lane site borders the Chilterns Area of Outstanding Natural Beauty.”</p> <p>Dacorum “are not obliged by the NPPF to prioritise housing targets over environmental or other concerns: paragraph 11, footnote 6 allows Dacorum to restrict the scale of development due to other planning constraints such as the impact on the Green Belt and AONB. In our view, the failure to do this means that their proposals are not consistent with the NPPF.”</p>

The 'places vision', emphasises growth over all other considerations and does not reflect the aspirations of local people. Northchurch Parish Council has many formal and informal consultations with residents about what is important to them. In line with their views, our published mission is to make Northchurch "a safe, healthy and vibrant community by:

- Helping local people to improve their physical health and mental wellbeing
- Making our roads safer
- Protecting and improving access to the Green Belt and other open spaces
- Preserving the environment and increase biodiversity
- Preserving the historic identity of Northchurch
- Being open and accessible, and engage local people in decision making"

<https://www.northchurchparishcouncil.gov.uk/>

All our work is focussed on achieving these aims. For example, we have a 5-year project to increase biodiversity by changing a 400m stretch of closely mown verge into a wildflower verge. We are carrying out a major project to improve play and exercise facilities at our recreation ground. We have set up a committee dedicated to improving road safety. These efforts will be undermined by the loss of so many acres of Green Belt. By over-emphasising growth, the 'places vision' meets neither the aspirations nor the concerns of Northchurch residents.

QUESTIONS NPPF comment	The council has failed to justify the dr ft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.

The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine " all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring. A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy " optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport ". There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan ' s expectation of delivery of 5,945 homes within the Green Belt has not been justified.

Yes / No * Yes * No	Yes
QUESTIONS NPPF comment	<p>We refer to the above consultation exercise and respond on behalf of our client, Fairfax Strategic Land (Hemel) Ltd, setting out a number of representations upon the Dacorum Local Plan Emerging Strategy for Growth (2020 – 2038) Consultation (the Emerging Strategy), including in relation to the omission of land located west of Piccotts End, Hemel Hempstead (LPA Site Assessment Ref HH69) as a housing allocation for up to 400 dwellings in helping to meet identified housing needs during the plan period.</p> <p>The following plans and documents are submitted in support of our representations:</p>

- Site Location Plan 1920-PL01 Rev A
- Indicative Site Layout 2037-PL04 Rev.G
- Landscape Assessment (Hyland Edgar Driver) (Feb 2021)
- Green Belt Assessment (CSA Environmental) (Feb 2021); and
- Highways and Accessibility Technical Note: Suitability of Land west of Leighton Buzzard Road, Hemel Hempstead and Analysis of Draft Housing Allocations (SK Transport) (Feb 2021).

The content of the supporting plans and particulars is set out below where relevant to the particular issue/discipline being addressed.

Land located to the west of Piccotts End, Hemel Hempstead is controlled by Fairfax Strategic Land (Hemel) Ltd extends to approximately 26ha (Site Assessment Ref HH69) and could provide for up to 400 dwellings.

The land comprises an available, suitable and deliverable opportunity to accommodate housing needs (both market and affordable), in a sustainable location, within the industry standard recommended walking and cycling distances from local services and facilities, including the significant retail, employment, community facility and leisure offer available in the town centre.

In addition, the ability to extend existing bus services into the site further serves to underpin the site's excellent sustainability credentials.

Development of the site for housing provides the opportunity to create a new planned expansion to Hemel Hempstead, and will include a CIL payment and/or commuted sum to be secured through a site-specific planning obligation to enhance the overall offer at Rossgate local centre; thus benefiting the wider community with an enhanced social offer.

The site's proximity to existing local centre, other local facilities as well as Hemel Hempstead town centre demonstrates the sustainability merits of the site for housing when set against the Council's on-going housing need.

A bus stop and turning loop has also been incorporated into the Indicative Site Layout, the provision of which has support from an established local bus provider having and they have confirmed they are willing to use the loop should permission be granted.

Notwithstanding the location of the site within the Green Belt, the character of the site is heavily influenced by the suburbs of Gadebridge, Piccotts End and other surrounding development including the electricity sub-station and garden centre beyond to the north.

The site offers the opportunity to provide a material contribution to the Borough's pressing and on-going housing need and do so in an appropriate manner without impacting upon the wider countryside surrounding Hemel Hempstead. As explained later in these representations, the site is ideally located to be brought forward for development in the early stages of the plan period, and/or in helping to meet a shortfall in the five year supply of deliverable land.

The land has inherent sustainability merits which make it suitable for residential development, and in our view represents a development opportunity providing a logical rounding off to the north of Hemel Hempstead with limit impact upon both the landscape and Green Belt purposes.

For the reasons set out in our submissions there are a number of fundamental shortcomings with the approach to site selection in the Emerging Local Plan Strategy that result in the need for amendments if it is to satisfy the tests of soundness at paragraph 35 of the NPPF.

Based on our assessment of the evidence base that has been used by the Council to underpin the approach to site selection, the Emerging Strategy cannot be said to be justified in so far as it fails to represent an appropriate strategy and nor does it adequately take account of the reasonable alternatives.

This is particularly the case for the approach to site selection at Hemel Hempstead.

We have undertaken a comparative analysis of the draft allocations proposed by the Council, including the 3 no. draft site allocations at Hemel Hempstead, comprising HH-h1b – North of Hemel Hempstead (phase 1), HH-h1b – North of

Hemel Hempstead (phases 1 and 2) and HH-h2 – North of Gadebridge (Land at Piccotts End) and conclude that on a proper consideration of the evidence base the Emerging Strategy should have identified our client's land at Piccotts End as a housing allocation(s).

Our representations focus on specific parts of the Emerging Strategy as follows:

- **Policy SP4: Delivering the Housing Strategy**

The consultation draft Local Plan sets out a need to plan for a significant level of growth, including in the form of urban extensions and Green Belt releases. This includes a significant amount of planned growth at Hemel Hempstead. The spatial strategy has purportedly been informed by a number of evidence base documents. They include, but are not limited to:

- Housing Topic Paper
- Site Selection Topic Paper
- Site Assessment
- Sustainability Appraisal
- Green Belt Study
- Highway Studies

Our detailed representations are set out below and include submissions in response to the content of these evidence base documents, including, inter alia, the Site Assessment (prepared by AECOM alongside the Topic Paper) and the Sustainability Appraisal ("SA").

The NPPF sets out the principal components to be included in local plans. Paragraph 35 requires that in order to be "sound" a Development Plan Document ('DPD') should be positively prepared, justified, effective and consistent with national policy.

In order to be justified the DPD must be founded upon a robust and credible evidence base and represent the most appropriate strategy when considered against the reasonable alternatives.

For the reasons set out below, we are of the view that the evidence base fails to provide a reasoned approach to site selection. This includes for the reasons set out in the accompanying plans and particulars (at (i) to (v) above). In this regard, we place particular emphasis upon the comparative analyses undertaken by Hyland Edgar Driver (landscape impact) and SK Transport Planning (highways) in relation to the Council's approach to site selection.

The findings of the CSA Green Belt Assessment are also important in so far as they identify the Council's Green Belt appraisal failed to undertake a finer grain analysis of the site as an individual land parcel. Rather, the Council's analysis assessed the site as part of a much wider area of land. Had the Council undertaken this finer grain analysis they would have concluded in relation to the suitability of the site as a Green Belt release and carried it forward for further assessment as a housing allocation.

As such, it is our view that **the Emerging Strategy cannot be said to be justified and nor can it be said to be effective.** We expand upon our submissions in the detailed considerations as set out below.

QUESTIONS NPPF comment	The Reg 18 Local Plan is generally consistent with the NPPF. The Crown Estate welcomes, in particular, the manner in which the emerging Local Plan deals with Green Belt issues. It has reflected the advice in paragraphs 133 to 147 of the NPPF in seeking to set clear, defensible and long term Green Belt boundaries which will meet development needs beyond

the 2038 end date of the Plan. This will provide the local community and developers with clarity and certainty in the long term.

QUESTIONS NPPF comment GREEN BELT

- The fundamental aim of Green Belt policy remains to contain urban sprawl by keeping land permanently open; essential characteristics of Green Belts are their openness and

In Dacorum, some 60% of the Borough is in Green Belt, with further landscape as part of the Chilterns Area of Outstanding Natural Beauty (AONB). The CCG recognises this therefore imposes not only constraints on DBC, but also statutory obligations.

The CCG regrettably finds that the LP is completely imbalanced in its twin objectives of meeting

(a) perceived (but not demonstrated or obligatory) housing demand, rather than need and (b) protecting natural green spaces. It is regretted that DBC has prioritised development at the expense of sacrificing irreplaceable green, natural landscapes of prime importance to the Borough and its present and future residents.

The CCG remains gravely concerned that instead of valuing and protecting the Borough's prime asset of Green Belt, the LP seeks to challenge and irrevocably change Green Belt status and importantly, thus damage the setting of the Chilterns AONB.

- Paragraph 80 of the National Planning Policy Framework (NPPF) sets out the 5 main purposes of the Green Belt which are:
 - *'to check the unrestricted sprawl of large built-up areas*
 - *to prevent neighbouring towns from merging into one another*
 - *to assist in safeguarding the countryside from encroachment*
 - *to preserve the setting and special character of historic towns*
 - *to assist in urban regeneration, by encouraging the recycling of derelict and other urban '*
- Clearly, the Green Belt in the Borough, particularly that around Tring and Berkhamsted, currently fulfils those The CCG finds no justifiable cause for those essential functions to be considered unnecessary or potentially replaceable by the development of '*new green spaces*' (LP 2.19 & 2.20)

Further, some Green Belt sites identified for development in the LP are prime agricultural farmland, which at this time of national crisis for the nation's economy and food supplies, should hold the highest level of protection. People need homes, but more people need food. Indeed, the Green Belt land to the East of Tring (TO 2 and TO 3) marked for

development is classified in the DLP Interim Sustainability Appraisal as Grade 2 agricultural land of '*best and most versatile*' quality. (LP Non- Technical summary p15, 4.4.6)

2.iv. The NPPF has a general presumption against development in Green Belt unless this meets the very special circumstances described in paragraphs 89 and 90. Clearly, the proposals of the LP do not do so. Therefore the CCG does not agree with release of current Green Belt land for housing unless and until such exceptional circumstances are clearly met.

- The NPPF does allow for review of Green Belt boundaries through preparation of a Local Plan (paragraph 83) and in the exceptional circumstances described in paragraph 85. Land which is used as open space, sport and recreation is protected by the NPPF. Green Belt sites particularly on the Eastern edge of Tring support all these activities, with good public access for walking, for fishing and boating on the Grand Union Canal, riding, running and cycling, together with valuable agricultural Public access such as that given by Marshcroft Lane, Tring, affords a good quality outdoor experience to people with limited physical mobility.
- All residents are aware of the widespread use of cycle routes, lanes and off-road paths by visitors, particularly ramblers and cyclists, to the area. Ease of access by road and rail from London and its suburbs makes the Chilterns a popular tourist destination which is healthy for participants and supports the local economy. The large scale housing options of the LP will diminish this experience and impact negatively upon both the local and visiting
- Consistent with the NPPF objectives to enhance beneficial use of the Green Belt, paragraph 81 states that once Green Belts have been defined (which they already are), Councils should plan positively to achieve this aim by providing opportunities for outdoor sport and recreation (see pt iv.); retaining and enhancing landscapes, visual amenity and biodiversity; or improving damaged and derelict land. The CCG finds limited opportunities within the LP for DBC to support these aims; indeed the options for housing development would significantly diminish the benefits of Green Belt within the Borough to the public.
- Significant wildlife corridors and habitats which have established over decades would be lost through development of Green Belt
- The Group understands there is no statutory obligation from Government for Councils to release Green Belt for housing. Rather, we believe Government calls for demonstration that housing needs can be met in other ways, eg. release of brown field sites, land banks held by developers where planning permission has been granted but not developed, increased urban density, conversion of currently unused urban and rural retail & office sites for low-cost

- This policy has been reinforced since the December 2020 announcement by the Secretary of State for Housing and Communities, Robert Jenrick, that the methodology for calculating housing needs would focus on England's 20 largest cities and urban centres and that policy would aim to maximise use of vacant buildings and under-used land, to regenerate urban communities, rather than new development in green

'We [Government] do not propose to proceed with the specific changes to the standard method that were consulted on. Instead we will proceed with a reformed standard method which reflects our commitment to levelling up and enables regeneration and renewal of our urban areas as we recover from the COVID-19 pandemic.'

Further, that: *' We have listened carefully to the feedback on our proposals, within the consultation and outside of this, including in Parliamenthave heard concerns that the distribution of need was not right. In particular, we heard that too much strain was being put on our rural areas and not enough focus was on the renewal of our towns and cities.'*

And: *'...in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. **We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.'***

(Government response to consultation: Proposed changes to standard method for assessing local housing need 16.12.20)

With due respect, it would seem that DBC has chosen to deliberately ignore this policy.

- Since 2017, both Government and the Mayor of London have publicly stated their support for the protection of Green Belt nationally and specifically around London. Indeed in his London Plan published 27.11.17. Sadiq Khan explicitly describes the Green Belt as '*London's lung*'. The CCG therefore finds DBC premature in seeking to release local Green Belt to housing, when this is not

statutory Government policy, nor we believe, do the circumstances fulfil the exceptional criteria described in the NPPF.

- CCG does not find creation of new green spaces acceptable replications of an existing, naturally beautiful, green and tranquil open Wildlife corridors, habitats and important markers such as hedgerows which have established

over time will disappear. The international monetary exchange rate is not in Britain's favour; it thus becomes even more essential to protect and support the nation's farmers in supplying our own food. Building over green landscapes and good quality farm land (such as that on the Eastern side of Tring) is short-sighted and ill-advised.

- Both Berkhamsted and Tring have green spaces around the towns widely used for walking, cycling, riding, dog-walking, running and a good network of well-used public rights of way which provide access. Residents and visitors would lose what they already have free access to and instead be offered an artificially contrived, man-made green

QUESTIONS NPPF comment

STATUTORY REQUIREMENT TO MUTUALLY CO-OPERATE WITH ADJOINING AUTHORITIES

- The CCG understands there is statutory obligation for Local Authorities to mutually co-operate with adjoining Authorities across boundaries for supply of
- The LP fails to identify any co-operation with the adjoining Local Authorities of Hertfordshire, Buckinghamshire and Bedfordshire. The NPPF specifically requires co-operation between adjoining Local Authorities, the LP fails to deliver this requirement.

- Discussions and agreements on how to implement this requirement should be under way with deadlines for conclusions before any firm decisions are made on finalisation of the DBC Local
- DBC has failed to comply with the requirements of the NPPF to co-operate with adjoining Local Authorities in meeting housing needs.
- CCG finds the figures for growth to be unreliable in terms of Government requirements and that they fail to take into account Government's recently revised (December 2020) policy focus

on urban regeneration in the North and Midlands and strengthening of protection for Green Belt.

QUESTIONS NPPF comment Para 20(c) of the NPPF requires '...sufficient provision for...community facilities (such as health...)'. Considering the impact if all the housing suggested for Tr01-Tr06 goes ahead, there appears to be a lack of clear consideration of the infrastructure needed to support this. This is especially true of local health services. New local health services would be needed and should be planned for.

Para 20 (d) of the NPPF requires ‘...sufficient provision for...conservation and enhancement of the natural...environment, including landscapes and green infrastructure...’There is nothing in the Plan about the conservation of existing and historic hedges (some of which along Marshcroft Lane for example are over 600 years old).

Para 24 of the NPPF provides that ‘Local planning authorities...are under a duty to cooperate with each other,...on strategic matters that cross administrative boundaries’.

Para 25 of the NPPF requires that ‘Strategic policy-making authorities shall collaborate...’ With this and Para 24 in mind it is noted that there seems to be inconsistency in the Plan regarding planning for warehousing for Tr01. There would appear to have been no cooperation or collaboration between the Council and Aylesbury Vale District Council regarding the option of providing such warehousing in land alongside the A41 road west of Tring where there is already some industrial building.

Para 34 of the NPPF provides that plans ‘should include setting out the levels and types of affordable housing provision required along with other infrastructure...’ The infrastructure has not been properly considered and it is understood that the housing proposals do not include many affordable homes. Also, with an increasingly empty number of shops in the town centre of Tring some of these properties could be used for personal accommodation.

Para 136 of the NPPF requires exceptional circumstances for alteration of Green belt boundaries. These have not been established for the proposed allocation of sites in Green belt land at Tr01-Tr03.

Para 170 of the NPPF provides that ‘Planning policies and decisions should contribute to and enhance the natural and local environment by: a) protecting and enhancing valued landscapes, sites of biodiversity...d) minimising impacts on and providing net gain for biodiversity...’The plan does not give adequate consideration to the valued landscapes and biodiversity of Tr01, Tr02 and Tr03.

Para 174 of the NPPF requires that ‘To protect and enhance biodiversity and geodiversity, plans should a) identify, map and safeguard components of local wildlife-rich habitats and wider ecological networks..., wildlife corridors and stepping stones that connect them...’ There appears to be no such identification or mapping at present for Tr01, Tr02 and Tr03. There are ancient hedges here (for example in Tr03 along Marshcroft Lane that may be 600 years old or more) which are important wildlife corridors, close to SSSIs such as Tring Reservoirs and Aldbury Nowers.

QUESTIONS NPPF comment	<p>The council has failed to justify the draft plan against the test of exceptional circumstances of Paragraph 137 of the Framework and as such cannot meet the definition of Paragraph 11b)i) so as to justify development in the Green Belt.</p> <p>The expectations of Paragraph 137 with regard exceptional circumstances states that there is a clear requirement to examine ' all other reasonable options for meeting its identified need for development" before being able to justify changes to Green Belt boundaries. The three strands of examination in this regard are found at Parts a) to c).</p>

With regard Part a) there is a requirement for an authority to demonstrate that the Plan makes as much use of possible suitable brownfield and under utilised land as far as possible. The Evidence Base used to justify the strategy for brownfield redevelopment has substantial shortfalls, particularly in relation to settlements outside of Hemel Hempstead that nonetheless are expected to bring forward a substantial provision of housing, such as Tring: A lack of proposed brownfield sites outside of Hemel Hempstead provides a substantial weakness with regard to the Council being able to prove under examination that exceptional circumstances have been met to justify the Green Belt allocation.

With regard Part b) there is an expectation that the strategy " optimises a density of development in-line with policies of Chapter 11 of the Framework, including whether the policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport" . There has been no assessment of whether minimum density standards can be uplifted within an existing settlement as part of the process undertaken by the Local Planning Authority; the Inner Settlement Density Assessment and opportunities associated with Tring and Berkhamsted in particular are non-existent and given the expected substantial contribution towards housing supply outside of settlements in both areas, a requirement so as to justify such incursion into the Green Belt is necessary so as to accord with Part b).

Particular attention should be paid to Paragraph 137 Part c), The council have not proactively cooperated with surrounding local planning authorities within Hertfordshire, Bedfordshire and Buckinghamshire; despite being required to do so to justify their exceptional circumstances position. The plan has therefore failed to accord with National Policy and Guidance.

It is not my place to determine the actual objectively assessed housing need for the Council, I do not ' believe the target housing figure associated with this Plan has met the requirements of an objectively assessed need. Therefore, the Plan's expectation of delivery of 5,945 homes within the Green Belt has not been justified.

QUESTIONS NPPF comment	<p>See comments under Question 4 regarding NPPF Paragraph 11b), in relation to Green Belt and AONB land, which provides "a strong reason for restricting the overall scale, type and distribution of development"</p> <p>Not only has the plan failed to comply with the NPPF but it also fails to comply with the Government guidance, Ministerial Written Statement and the revised indicative housing need figure for Dacorum issued on the 16th of December 2020. It is very unfortunate that such a significant change in Government policy and resulting guidance was issued after this version of the Local Plan was published but it does nevertheless make it out of date and in need of revision before submission.</p>

QUESTIONS NPPF comment	<p>We note the statements in the NPPF Para 11:</p> <p>“The presumption in favour of sustainable development.</p> <p><i>Plans and decisions should apply a presumption in favour of sustainable development.</i></p> <p><i>For plan-making this means that:</i></p> <p>1 <i>plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change;</i></p>

- 2 *strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless:*
 - 1 *the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or*
 - 2 *any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole”*

We have previously said we remain unpersuaded on the assumptions made that lead to the number of dwellings proposed to be built over the Plan period. There is an assumption in the Draft Plan that there is demonstrable benefit that outweighs the disbenefits of the proposed release of land from the Green Belt. We dispute that this is the case certainly around Berkhamsted and Northchurch where sub para i and ii should take precedence and be applied.

Comments such as sustaining vibrancy etc are not accompanied by evidence to support the argument.

- Maintaining supply and delivery

Para 73 *includes the comment: Local planning authorities should identify and update annually a supply of specific deliverable sites sufficient to provide a minimum of five years’ worth of housing against their housing requirement set out in adopted strategic policies, or against their local housing need where the strategic policies are more than five years old.*

This invites the question on what is the appropriate number for the local housing need: in this Borough the need is for dwellings at ‘affordable cost’ or ‘social rent’. The footnote 37 [Page 20] states:

Where local housing need is used as the basis for assessing whether a five-year supply of specific deliverable sites exists, it should be calculated using the standard method set out in national planning guidance.

This introduces a contradiction and conflates open market housing supply with housing need. This leads to a further increase of dwelling numbers, in excess of what the ONS data is projecting, and locally, to significant demand for Green Belt land release beyond the urban capacity.

The strategic policy adopted in 2013 set an annual requirement of 430 dpa; the ‘local housing need’ may be greater than this number, but even so that is larger than the number projected from the 2018 ONS data.

C. Green Belt – releases

The Draft Plan sets out to meet the stated number of dwellings as required or calculated by the ‘standard method’ determined by the Ministry, with a modest buffer. Para 19.6 and 19.7 of the Draft Plan make reference to Para 136 of the NPPF viz:

Until the adoption of the Draft Plan, the final sentence should read:

It is proposed to release Green Belt land to enable the delivery of the spatial strategy for Dacorum.

NPPF Para 137 says:

Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development.

This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:

- 1 makes as much use as possible of suitable brownfield sites and underutilised land;*
- 2 optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and*
- 3 has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.*

We note the 2017 consultation identified Urban Capacity as 10,940 dwellings. We shall leave it to others to determine the technical aspects of a) and b) but we cannot agree that the site locations selected for Berkhamsted [and Northchurch] can be considered as *'other locations well served by public transport'*.

We look forward per sub para c) to learning whether discussions with neighbouring authorities prove fruitful.

QUESTION ANY OTHER COMMENT comment	<p>The world has changed since the Pandemic, the resulting implications of employment and the local economy need to be taken into account.</p> <p>The current plan is now obsolete. Hemel Hempstead needs to grow in size in order to gain more traction, power and strength both politically and economically. The building of new commercial and domestic property and infrastructure should be concentrated in Hemel Hempstead. The market towns of Tring and Berkhamsted should not be burdened with the extra housing which will destroy the character and quality of these places.</p>

QUESTION ANY OTHER COMMENT comment	<p>Trying to summarise all the sections set out in the DBC strategy plan has been a bit of a task. So with out to much detail I will give my honest comments.</p> <p>ECONOMY BOOST The idea to increase the business content within Dacorum is always going to be a big winner along with the proposed new roadways to support these.</p> <p>TRANSPORT An improved transport network will bring the idea of using local public transport into the minds of local residents, but do not try to demonise the use of private transport for trips to the town centre or to rural settings.</p> <p>TOURISM To improve local area's to attract tourism and day visitors' needs to work within the designs of, once again, public transport and private transport. Maybe review possible use of park and ride car parks.</p> <p>BUSINESS The plan to use land next to the A41, A414, M1 and possibly the M25 for new business would be a good logistical enticement to bring in new companies.</p> <p>ENVIROMENT The development of "brown field sites" for housing and business indicates that the DBC is attempting to do its best for the environment. But along with this I don't see any driving plans for Green and Renewable energy sources such as bio mass boilers, solar panel farms or wind turbines.</p>

AFFORDABLE RENTED HOMES One of my main concerns with the massive home building plan is how many new properties will be owned by the DBC under the ARCH (Association of Retained Council Housing) scheme. Plus will the rentable price be at affordable social rents. It has been shown that housing associations tend to charge a higher rent on like for like properties owned by the DBC.

COMMUNITY INVOLVEMENT With regards to the new planned housing estates will the populous of the existing local communities have a voice and positive input into the communities at the planning stage? If these do go ahead, will the community supporting inferstructures be built e.g. Shops, Doctor’s surgeries, community centres, before the housing estates are started? My point being if these are not in place once the new residents have moved onto the new estate, other local amenities will be over whelmed.

APPROPRIATE USE OF LAND FOR DEVELOPEMENT I strongly feel that the land allocation for Traveller and Gypsy pitches would be put to far better use if used for permanent dwellings. You would get more homes than caravans onto that allocation of land. By the nature of Gypsy and Travellers, they just move on, who’s to say these sites may not be fully utilised, if not left empty.

GREEN BELT & CONSERVATION My final concern is the potential harm to our Green Belt land and conserving the natural environment not just to the flora but also our hidden fauna that could well be displaced by the planning housing and business plan. I would like to see a statement of intent that the proposed plan adhere to agreements regarding both our Green belt land and Conserving the natural environment within the DBC so it is seen to pay lip service to this issue.

QUESTION ANY OTHER COMMENT comment	It is clear that the development team do not live or work in Tring. Essentially a market town, Tring is not able to sustain the level of building proposed. No level of thought has gone into how the small town of Tring will support so many new residents who all have 2/3 cars and children. Doctors are already at capacity as are dentist and school and ancillary support groups. Road infrastructure will not sustain more car users and I worry for a major accident and the accessibility

of emergency vehicles through the town. In addition taking away most valued open space which has become more used and vital during Covid will be lost and never replaced. Please rethink your plans to reduce the impact on our small and precious town. Thank you.

QUESTION ANY OTHER COMMENT comment	<p>I do feel that this plan is out of date considering the effects of the pandemic on the ways people work and shop; and it hasn't taken into account the change in the government's housing algorithm.</p> <p>On a separate note, this planning portal is clunky and not very user friendly. Added to this, on many occasions the comments pages were unavailable, the site froze, etc. That coupled with sheer amount of documents one has to plough through makes the whole, a very off-putting prospect for a lot of residents, I am sure. It has taken me about a week's worth of sessions, several hours long to get to this point and I haven't managed to read all the supporting documentation available. I would also like to say that there is an over reliance on abbreviations and professional language in some sections of the documents which also makes it difficult for the lay-person to digest.</p>

QUESTION ANY OTHER COMMENT comment	<p>This is the wrong time to be aspiring to carry out a long-term strategy. It is clear that the Covid pandemic has accelerated some changes and dramatically altered a number of assumptions about the nature of work, travel, shopping, and services. It will take some time after the pandemic is controlled for the lasting impacts to become evident but it is clear that they are major and permanent. A plan drawn up in such an uncertain time cannot claim to be evidence-based.</p>

QUESTION ANY OTHER COMMENT comment	I have repeatedly tried to open the Comment Box for Question 28 Any Other Comment but the Comment Box that opens refers to Section 26 Evidence Base. Please attach the following comment to Question 28. Not included in the Dacorum Plan is a proposal to develop a site known as Bulbourne Cross, the developer is Thakeham. Thakeham have mail-shotted extensively in Berkhamsted and have a website with details of their proposals. I would like to object now to any consideration of this site being added at a future date to the Dacorum Plan. The plot Thakeham have earmarked is: 1. Further from the town centre than the proposals in the Dacorum Plan hence increased car journeys and adverse impact on the environment and additional strain on town centre parking.

2. The site is directly opposite and only the width of the London Road from an area designated as AONB. The Thakeham site and the AONB area are on opposite sides of a steep-sided valley so the visual impact on the setting of and views from the AONB would be enormously detrimental.

3. The site of the proposed development is on Green Belt land which separates Berkhamsted from Bourne End and, in turn, Hemel Hempstead and is a perfect example of Green Belt that fulfills its primary purposes of:

- i) Checking sprawl
- iii) Preventing merging
- iv) Safeguarding countryside
- v) Preserving the setting and character of historic towns

QUESTION ANY OTHER COMMENT comment

Over-reliance on aspirational growth strategies and partnerships which have not been subject to public consultation and scrutiny.
 The Emerging Strategy for Growth appears to be based on selective strategy documents* that have no formal planning status and which have not been widely consulted on. As a result, the Strategy has failed to take account of a number of

important issues - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs.

The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.

QUESTION ANY OTHER COMMENT comment It is appreciated a great deal of work has gone into preparing the plan and the Borough is required by central government to prepare such a plan under threat of having one imposed on them. The fundamental problem is the targets set by central government are wrong for the country and Borough. The targets are inconsistent with government's declared policy of 'levelling up' the country. There needs to be a fundamental rethink taking account of the impact of Covid-19 and new technologies on working practices which change the way people want to work and where they want to live. Any plan needs to encourage people to move away from the overcrowded and expensive south east of England.

It is Dacorum's responsibility to investigate if the targets proposed by central government are both suitable and achievable for towns like Berkhamsted and Tring. Instead Dacorum has set out to identify land that the target number of houses can be built on. Dacorum must first develop a balanced evidence based case for the need for new housing in Berkhamsted and then explore all options to meet that need only using green belt land as a last resort. Dacorum must put the welfare of the community it is responsible for before the interests of developers. Dacorum has been negligent in not putting forward a balanced evidence based case for the number of new houses needed in Berkhamsted.

QUESTION ANY OTHER COMMENT comment	Whilst the plan looks like a very comprehensive and professional document, I did not vote for this, and I certainly disagree with Tring being vandalised by so many new homes, within the supposed 'Green belt'. No doubt there are pages of 'fudge' about looking for brown-field site alternatives and finding nothing suitable; I very much doubt the veracity of any such comments given the number of possible estates and smaller areas that could have been re-purposed. Good luck to anyone seeking to stop this travesty.

QUESTION ANY OTHER COMMENT comment	Growth at any cost is not the answer. The "vision" mentions sustainability throughout, but none of this growth is sustainable. Overloading areas with a population it cannot support will be detrimental to the countryside, farm land, green space and

the lives of those who have chosen to live in the area. Steady and monitored growth means strategic thinking and adapting to changing conditions. Build the infrastructure and only then, grow in line with that. The policy as it stands is to build at a rapid rate, seemingly at any cost.

My experiences are of living in Tring, but it is likely the sentiment is echoed all through the Borough. For example, it is already hard to get a doctors/dentist appointment. Increase healthcare capacity, then grow the community.

The employment growth you are forecasting is simply a proposal and not a reality. We simply can't know what the economic situation will be – some of your plan may succeed, but others will likely falter. Build the economy, then build the housing.

Tring is a commuter town and a (significant) proportion of new inhabitants will likely commute to London on a trainline already at capacity. Station car parks are full before rush hour is over - where is the proposal to increase that capacity?

You mention building a better link between Tring and the station, build it first and demonstrate that it works. What is currently in place is dangerous for pedestrians, cyclists and drivers. A small cohort will cycle in any weather, many (including me!) will not and will resort to driving. You also can't change the existing road infrastructure; Tring high street is extremely narrow. A single vehicle stopping (eg deliveries, mail van) backs up traffic. Increasing housing in Tring by such radical numbers will result in far more congestion and pollution – flying directly in the face of your environment plan.

It's easy to demonstrate now that people drive to the town and do not walk, and an increase in population will result in increased traffic, particularly as the green belt sites are some distance from the town centre.

Residents in this area should not be made to pay for short sighted thinking. The proposal to build vast numbers does one thing; makes developers very rich. They will build the standard "cookie cutter" houses, with minimal space between properties, minimal parking and a minimal green space. Once they have been paid, they will leave and having irreparably changed the face of the town, we, and future generations will be left to suffer the consequences.

These new estates seen all over the country are the modern equivalent of tower blocks build in the 60s. We will look back in 50 years and wonder why anyone thought they were a good idea. The example to the west of Tring is a key demonstration of this. Decorating the house that face the main road with a pretty stone façade is just that, a façade. Look within the roads and you see narrow houses, squashed in at the edge of town, forcing people to drive to town. Maximising profits for developers, ignoring the real needs of the town inhabitants.

In the original "vision", I believe the proposed number of houses in Tring was between 600 and 1100, which seemed absurdly high. You have now raised this to 2,731 (an odd number, how can you be so exact? Presumably because this was calculated by a formula rather than rationale thought) but cannot see any justification for that alarming increase. I made the same points then, grow the infrastructure and then grow the housing stock, not the other way around. Targets are not the answer. Destroying green belt and farm land is not the answer. Once you have made these mistakes, we cannot go back.

This may be mandated from Westminster, but your job as our local representatives is to fight back. I am not anti-growth – our population is expanding, but we need to grow in a sustainable, controlled way, not mandating the growth of a town by 40-50%. I spent many hours reading through the 2017 documents and responding. Now to find out that you are “doubling down” on expansion at such a rate is very disheartening. Many people do not have the time to read through

such lengthy document and reply but their lack of response should not be taken as de facto approval. We love where we live. Please, take the time to make the right choice and not put this monstrosity of a plan into action.

QUESTION ANY OTHER COMMENT comment	As a Tring resident, the plan is deeply disappointing and upsetting to me from the perspective of the green belt development in an area of outstanding natural beauty, bring huge future congestion to this area and undermining the great work that the Tring community has done to preserve its past and look after its future. This plan is not workable and will lead to vastly impacted lives, nature and generations of the future.

QUESTION ANY OTHER COMMENT comment	I understand that the way central government has dictated the number of new houses needed in Dacorum, but I also do not agree with this method for the following reasons: <ol style="list-style-type: none"> 1 Central government should be looking at the country as a whole and not piecemeal. 2 There are areas of brownfield land outside of the home counties that could meet all of the housing needs. This would give much needed investment into these areas and make the north-south split less pronounced. 3 With Covid there is likely to be numerous commercial offices lying empty within inner cities, which should be considered for conversion to residential first rather than building on greenbelt.

QUESTION ANY OTHER COMMENT comment	<p>I have already commented on the Plan with particular reference to Berkhamsted and expressed my considerable disapproval. Having now read additional comments from BRAG, the Chiltern Society and CPRE, I feel that the whole Plan has many flaws. Apart from the massive environmental impact, especially with regard to the aquifers and fragile chalk streams, the calculations were based on a faulty algorithm. Additionally, no concern seems to have been given to the effects of the pandemic. Surely there will be many commercial and retail sites which will remain empty and these</p>

could be used for housing instead of encroaching on Green Belt Land and permanently blighting what is still an attractive area on the edge of an AONB. I hope that the Plan will be revised.

QUESTION ANY OTHER COMMENT comment	<p>There appears to be a mistake in this form as the section is for 'any other comment', but the question listed is specifically about the Evidence Base. I will use this space for Any Other Comment.</p> <p>As a long-term resident of Dacorum I feel betrayed by these proposals. There appears to be a fundamental flaw at the heart of them whereby they try to meet a supposed housing target that is not in fact a housing target. To meet this target requires permanent, unsustainable destruction of Green Belt land that was created for the express purpose of preventing urban overdevelopment. In the case of Berkhamsted, the proposals also go directly against the Core Strategy developed in 2013. In the Core Strategy, numerous points were made about why areas of development such as that suggested for South Berkhamsted were unsuitable. And yet now, because there's supposedly a target to be met (though there isn't), all these still valid arguments are being ignored.</p>

QUESTION ANY OTHER COMMENT comment	<p>The Plan, for reasons that are not clear, conveys a message that growth far in excess of that necessary, along with the significant loss of Green Belt, is a <i>fait accompli</i>. This is in stark contrast to previous versions of the Plan and is not aligned with the clear wishes of the vast majority of the Borough's population.</p> <p>Despite many welcome, positive intentions expressed in the Vision and Strategic Objectives, the Plan feels – at present – more like a 1980s', developer-led charter than a guide appropriate for the 21st century.</p> <p>We believe that Dacorum would be strongly supported by its populace if it grasps the opportunity to make a few significant and bold changes. Many local groups would be willing to share the workload.</p> <p>In particular, there is scope to be bolder: presenting evidence to push back on Government targets, being less reliant on developer proposals; and recognising that the role of a Local Plan should be as much about the proactive development and protection of our natural environment as it is about developing and enhancing our built environment.</p> <p>On Housing Growth</p> <p>The real reasons for the excessively high housing growth numbers in the Plan are not explicit – especially for Tring where the relative increase in almost three times higher than the next most impacted town (and this in an area which, even according to presented evidence, is least well suited to such an increase in terms of adverse impact on the environment). The proposed numbers are already in excess of that required by the Government. We would point out that Dacorum Council is well within its rights to push back on these numbers (even if they are reduced significantly) when it can be shown to result in inappropriately high impact on other important measures. We have touched on many of these earlier in our response.</p> <p>If the numbers were driven by calculations for generating a required level of CIL income (e.g., the notion that excessive extra houses have to be built in Tring in order to fund a new secondary school – which is only required because we are</p>

building so many new houses) then these assumptions need to be fundamentally revisited. Again, if the numbers do not work out it is further grounds for pushing back on growth, NOT to accelerate it.

On Loss of Green Belt

In the 21st century Green Belt becomes arguably more important. This was once recognised in Dacorum's own strategic planning guidelines. There is a strong case that Green Belt should, in fact, be proactively enhanced in order to help meet carbon-emission and biodiversity goals, provide the sort of wild green recreational spaces that are increasingly in demand, and also provide economic growth (recognising that Dacorum – and especially Tring – is increasingly becoming a green 'destination' space).

There is virtually no evidence that this perspective on Green Belt has been acknowledged or understood by the authors of the Plan. This need to be urgently revisited.

On Distinctive Developments and Vision for the Future

The need for 'distinctive' development is mentioned several times in connection both with the natural and built environments (e.g., '*All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.*' – Overarching Vision, page 22).

It is not clear how this will be either defined or agreed for Tring, which is arguably the most distinctive settlement in Dacorum in terms of natural setting, social and economic history. Neither is it clear how this will be given 'teeth' in order to proactively shape development.

There is a real opportunity here for Dacorum to create an exemplar Plan and an opportunity to work with local groups sooner rather than later.

In the absence of a working definition, Tring in Transition has created an initial description of what makes Tring distinctive to help shape what we would expect to see in the final version of the Plan. This highlights our unique heritage and location, including:

- A Rothschild legacy of forward-thinking development, respect for the environment, bold and challenging designs and solutions.
- A strong heritage of local renewable energy with significant wind and waterpower.
- A location surrounded by more than 50% of Dacorum's SSSIs, extensive AONBs, as well as extensive hedgerows and other wild places.
- A service-oriented, agricultural, market legacy and a traditional destination location to visit, meet, relax and socialise.

From these we have also developed four distinct 'visions' for improving the standard of developments in Tring. Each responds to one or more of the deficiencies in the Plan and builds on Tring's distinctive features.

All of them are based on schemes already seen elsewhere. These are not blue-sky concepts and are easy to adopt:

1 'Tring Fields'

To help proactively address any loss of Green Belt and meet NPPF guidelines to mitigate the same:

The overarching theme is that each existing field will provide the basis of the layout of any future development. Each will have a purpose, an individual ‘personality’. This may be a cluster of housing, an informal green space, a school, a services unit or a health clinic.

By basing the development physically on the existing field system, we propose that Tring Fields will create an attractive new development in keeping with the adjoining AONB and Green Belt area in which it is built and by which it will be surrounded.

- It keeps the existing green infrastructure of hedges and field boundaries – meeting the requirement for joined green corridors and informal green spaces.
- Marshcroft Lane becomes the crowning glory of the development, the central draw and attraction, remaining as a quiet lane with the proposed link road NOT cutting across it.
- The houses are built in clusters in the existing fields, each complying to high energy efficiency standards.
- Each cluster will have a particular design and character (an approach already used successfully elsewhere in the UK).
- Community spirit is created by the intimate feel of the individual clusters which still remain part of a greater whole.

1 ‘21st Century Market Town’

To address the need for growth, enhance the existing town centre and correct assumptions apparently carried over from previous planning exercises (traceable back to the 1990s).

We proposed taking a lead from existing ‘21st-century market town’ schemes successfully being deployed in Yorkshire, Stroud etc. In summary, this includes recognising the limited need for new town centre retail space; acknowledging that central supermarkets are more damaging environmentally than those designed to limit travel and traffic congestion; and acknowledging changing employment patterns and social norms (this is especially true for Tring).

- Replace proposals for significant new retail space and encourage more food, experiential, social, entertainment and ‘destination’ spaces etc.
- Revisit plans for a central supermarket (which will only add to issues with existing traffic hot spots) and recognise the patterns of use from those living in villages to the north of Tring. (Depending on revisions to developments – this could well be at the Bulbourne side of town.)
- Remove proposals for warehousing and large industrial units on the Dunsley Farm site and build on Tring’s heritage as a service-oriented market town by building smaller, more flexible workspaces that reflect rapidly growing local/home-working patterns.
- Revisit plans for Tr06/Brook St: prioritise schemes fronting to the High Street, encouraging food, social and ‘destination’ spaces.
- Recognise that Dunsley Farm is better suited to residential home development than light industry – meeting both social and employment needs.

1 ‘Linked Wildlife Corridors’

To address pressures on local green spaces, SSSIs, biodiversity and Green Belt loss.

The definitions of open spaces, green spaces, green buffers and wildlife corridors need to be more explicit. They are a consistent cause of confusion and question in the Plan. There is a need for all of these, but given the high number of SSSIs around Tring, AONBs, the Beechwood SAC, etc. **there is an opportunity to establish a country-leading if not world-leading scheme where defined wildlife corridors are proactively established around the entire perimeter of the town, through new developments and onwards to local nature reserves etc.**

- Implement joined-up wildlife corridors through and around all new developments.
- Explicitly plan to proactively link all SSSIs via wildlife/green corridors.
- Provide managed public access through a new network of paths.
- Provide an opportunity for the various organisations managing local wild spaces (Woodland Trust, National Trust, Wildlife Trusts, Chiltern Society, Rothschild Estates etc.) to work together with the Council to design and build this. (An initial poll of these organisations indicates a strong willingness.)
- Recognise NPPF requirement that any Green Belt development requires explicit mitigation and improvement on *other* Green Belt land. (The inclusion of green and open spaces in existing Green Belt parcels earmarked for development does not count towards this.)

1 ‘Sustainable Energy Use’

To address county and national carbon targets and to reinvent Tring’s legacy of renewable energy use. We acknowledge statements about going beyond current government guidelines on new housing insulation. This sounds good but will already be superseded by more demanding targets before we are halfway through the term of this Plan. We are also aware that developers have pushed back with statements like ‘we don’t find a market for solar panels’ etc. These are, frankly, irrelevant and should be entirely disregarded.

Developments around Tring have a clear and new opportunity to embrace the highest possible standards that can be mandated (if not higher):

- All new developments built to highest possible standards of carbon neutral build and energy efficient operation.
- Renewable energy targets, inclusion of solar systems in new homes etc. (regardless of any developer pushback) should be explicitly mandated.
- See our detailed response to SP24 etc.

=====

Summary

The following is a summary of our key concerns, which are expanded upon in our detailed response below. In addition, given the absence of a distinctive vision for Tring and its surroundings, we have also summarised key visions for how the current Local Plan can be changed and lead to a better outcome for our town, Dacorum and our neighbours.

- 1 A very high percentage of expansion at Tring is proposed to be on Green Belt land and we believe there is a strong case that any developments on former Green Belt land should be **held to the highest possible environmentally**

friendly, sustainability and energy efficiency standards. Explicit provision should be made for this – if we want distinctive, exemplar development this must be mandated. In addition, the NPPF also calls for ‘for compensatory improvements to be made to the environmental quality and accessibility of remaining Green Belt land’ and this must also be explicit with minimum 10% net gain. This is not at present explicitly addressed and is a significant point of non-compliance.

- 1 The proposed growth of over 2700 new homes is not compliant with the heart of NPPF guidance for ‘sustainable development’. It is proportionately by far the largest urban growth across Dacorum in a location that is arguably least well suited for it. It is significantly above the evidence-based proportion for Tring based on population growth through the Plan period as amended by the Government’s ‘affordability’ formula (evidenced in the September 2020 SW Herts Local Housing document).

Even if the numbers decrease significantly after recently announced Government changes there is no information in the Plan about prioritisation for reduced numbers (this needs to be made public) and it is likely the essence of the plan will remain much the same. Therefore, the following concerns remain valid:

- 1 The proposed north–south link road from Bulbourne to London Road via Station Road is ill-defined and cuts through a major wildlife corridor – Marshcroft Lane – and an AONB. It is therefore subject to constraints that have yet to be examined, yet it seems key to the present development plan for Tr03. **No development on Tr03 should be sanctioned until this is fully resolved.**
- 1 The provisions for green/wildlife corridors (especially in Tr01, 02 and 03) are confused, inadequately defined and fall well short of the provision called for in the most recent Herts Environment and Sustainability guidelines (Nov 2020). In particular, the corridors are poorly linked together and do not explicitly protect the hedgerows (including Marshcroft Lane) and the surrounding countryside that are a key part of the character of the area and vital to local biodiversity. **Overall, the plan for Tring falls short of NPPF para 147, and paras 99/100.**
- 1 The proposals for Tr06 (Brook St) are based on assumptions that are no longer valid given other stated goals and the growth in development elsewhere in Tring. **They also miss a clear opportunity to provide distinctive and modern facilities better suited to the mid-21st century.**
- 1 Public transport goals are aspirational only and there is nothing in the Plan that convincingly addresses transport between Tring Station and the town centre or around the new developments, or which supports modern, novel solutions.

- 1 Net carbon neutrality is an essential target and new developments present an ideal opportunity to meet the highest standards. We note DBC policy of 2020 is to be zero carbon by 2030. The Plan makes several references to 'exemplar' development but falls short of explicitly defining standards for energy efficiency (through building standards) and the inclusion of extensive local energy capture (e.g., via solar) etc. The Plan does not set the bar high enough with respect to these at present.
- 1 Tring is flanked on two sides by Buckinghamshire and traffic, town centre use, schooling and employment patterns are influenced very strongly by this. **There is no reference to liaison with Bucks in the plan.** We are concerned that conclusions about the locations of employment, retail and recreational sites are flawed in places and generally sub-optimised as a result. The same is also true when looking at environmental considerations.
- 2 A key and important goal, first built into the Issues and Options (2017) Plan, is for the Local Plan and developments to reflect local distinctiveness. **There is no evidence that Tring's distinctive character (in its history, town economy, unique location, etc.) has been defined, and there is therefore no associated vision; this presents an unacceptably high risk of generic, unsympathetic development.**

QUESTION ANY OTHER COMMENT comment

Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite. Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.

Dacorum should implement a local plan that includes firm and ambitious sustainable commitments. All new buildings should be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets and store and re-use grey water. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.

- The 40% minimum affordable homes objective should be enforced across the Borough. Too often developers in the past have been allowed to waive their affordable homes commitments.
- Trees and woodland are very valuable to the environment and the community's physical and mental health. I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, any new major development area.
- An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors.
- Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside boundaries. These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.
- The Local Plan should allocate land for new allotments for resident of new homes as well as laying out gardens to support 'Growing your own'(which is both sustainable and good for mental health)
- Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be widened. Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

We are facing a climate emergency and addressing this must be at the absolute core of Dacorum's Local Plan. Currently it is not. We have the knowledge and technology to make good affordable zero carbon sustainable homes. We must demand that the Local Plan prioritises this.

QUESTION ANY OTHER COMMENT comment	<p>The Northchurch developments are ill thought out and will cause significant issues with traffic safety (how on earth are people supposed to cycle and walk to town and surrounding areas, if cars are moving from the top of shootersway, down into Northchurch and using Granville Road and Westfield road as cut throughs - have you actually been along these roads to see how damaged some of the cars are - along with all the traffic and congestion from the Church congregation, Northchurch social centre, the schools, the Tesco, etc etc). The Darrs Lane development is a ridiculous idea and will cause immense traffic congestion, air pollution, noise pollution, an eradication of a beautiful green space; eradication of wildlife habitat and wildlife corridors, along with amenable space for residents (we use the wishing tree field for walking, we use Bell Lane for walking). Not to mention the biodiversity of some of these hedgrows and lanes. Additionally, the trees at the back of Granville road adjacent to the field - if these are going to be destroyed by developers I am going to turn into Swampy because these are mature trees with nesting owls and roosting bats with a huge number of different types of birds nesting during March April. These trees should have preservation orders on them.</p> <p>Additionally the view is in the settlement of AONB. Why on earth would you allow this to be spoilt.</p> <p>The water courses are already stretched and the Bulbourne will have further pressure on it. Our chalk streams are some of the loveliest in the country. Why would this government allow these precious habitats to be spoilt.</p> <p>I don't approve of the plan to build on greenbelt land. The National Planning Policy Framework (NPPF) specifically states (paragraph 11b) that Sustainable Development for local plans means, amongst other criteria, meeting housing needs 'unless policies in the NPPF that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development', listing Green Belt, AONB's and SAC's amongst such 'areas or assets' in footnote 6.</p> <p>Dacorum Borough Council has failed to follow this national planning policy to take these areas, such as the loss of Green Belt and the Chilterns Area of Outstanding Natural Beauty (AONB), into account when proposing the number of houses that should be built. The council have strong reasons to refuse the housing numbers under the NPPF and should do so immediately to safeguard AONB and greenbelt land.</p> <p>There are brownfield areas which are suitable for development - Northchurch garages (there are two sets of them); The area where Majestic wine is (why on earth is that shop there anyway). Parts of the Industrial estate which is underutilised. Tesco Car park in central Berkhamsted. Why do we still need this, we have a multistorey car park fit for a city next to Waitrose. Berkhamsted telephone exchange next to M&S - why is that still there when this could be valuable social housing and allow people to access services and shops. Some of the 'retirement homes' - have they all sold yet? I think not. Convert them to social housing for the mobility challenged. Unused office space and failing public houses . This is just off the top of my head.</p>

My opinion is that this consultation should not have gone ahead in lockdown. I personally found out about this consultation through Facebook. It is just not acceptable that an elected Council be apathetic about their residents not being aware or being able to access information easily and comment on a plan that will affect them and their families and their children now and in the future.

The way this web portal is set up, is confusing, with questions asked of specific policies and seems to prevent the average person to be able to demonstrate their views by restricting it to specific questions. This is not acceptable. The portal should be made easier and more transparent. Its taken much of my time to navigate through the mire of information when all I would like to do, is to put my views across as a resident of Northchurch village. Its just not acceptable and shameful that this Council should consider it adequate.

I dont agree with the plan.

This consultation is also unfair, given the timing of it - over a Christmas holiday period; during a lockdown period when everyone is struggling to hold onto their jobs and home school their kids; where the elderly communities have been unable to travel to view documents; where the community has not been able to attend meetings; where meetings have been held, suffer hijacking of zoom calls. This is an **unfair consultation at the outset**.

The numbers of proposed houses across Dacorum is based on incorrect and out of date data. The numbers do not reflect Dacorum population growth and far exceed sensible numbers which are sustainable. Local and National policies will be contraved in terms of climate change (as discussed above), sustainability and greenbelt land /AONB.

QUESTION ANY OTHER COMMENT comment	I am dismayed that this consultation has taken place at a time when the whole nation has been distracted by a global pandemic and it is unlikely that this very important subject will have got the attention it would otherwise have done so. The majority of councillors themselves believe that the numbers are wrong and that it is wrong to build on protected greenbelt land yet still this proposal has gone through. Given the timing of this consultation I only hope that enough people have had opportunity to go through this obstructive and lengthy tome and been able to articulate their comments sufficiently that they are taken note of.

<p>QUESTION ANY OTHER COMMENT comment</p>	<p>Growth area TR06 – off Brook Street Tring</p> <p>TR06 comprises Tring Market Auctions, The Tring Local History Museum, the Fire Station and Forge Car Park.</p> <p>Tring Market Auctions is located at the rear of the site of TR06 with access from Brook Street and a license to access the Forge Car Park.</p> <p>The ownership of the site is divided between Tring Town Council (Auction Rooms, Museum and the Market Place <i>hardstanding area</i>), Dacorum Borough Council (Forge Car Park) and Herts County Council (The Fire Station). The Freehold ownerships make it a somewhat complicated issue should planning proceed.</p> <p>In the proposal, no mention has been made for Tring Market Auctions to be included in the future plans of TR06, but mention has been made that if the site is re-developed Tring Market Auctions would be offered an alternative site in the town – where? The Auctions currently comprise about 16000 sq ft of buildings alone together with the adjoining parking areas. No detail has been provided and no mention of re-location provisions has been made. It appears the proposals are an afterthought to the Dacorum local plan. Tring Market Auctions occupy under the terms of a lease with Tring Town Council.</p> <p><u>The History and Current use of the Site</u></p> <p>In 1893 under the requirements of the Board of Agriculture and with the assistance of Lord Rothschild, the sale room with office was constructed in Brook Street. It was let to W Brown & Co. who conducted the first sale by auction in January 1894, since when auctions and sales have been held continually on the site for over 125 years – surely this qualifies the location to be part of Tring’s heritage.</p> <p>During recent years from 1960 there has been numerous enquiries and planning applications to develop the site with offices and supermarkets together with residential, all of which have been rejected.</p> <p>In 1993 the livestock auction ceased to operate leaving the chattel auction business to continue and flourish under the directorship of Stephen Hearn who took Tring Market Auctions to become independent and grow into the fine company it is today.</p> <p>It now has an extensive complex of four Auction Rooms, forming one of the largest and best known venues of its type in the Home Counties.</p> <p>The sales attract a very large number of vendors and buyers from Tring and the surrounding towns and villages together with an ever-growing number of people from throughout the Home Counties and Internationally. Many of the buyers represent the trade and other specialist collectors in all categories.</p> <p>The auctions provide a friendly and entertaining atmosphere on sale days making it an enjoyable venue for both business and pleasure. Regularly around 500 visitors attend on viewing and sale days, many of these attending the auction visit the town shops and local attractions.</p>

Tring Market Auctions is a unique and key component of the town's economic town centre fabric. It provides a key fulcrum for maintaining the town centre economic sustainability. Visitors to the auctions provide business for other local shops and enterprises not just on sale days but across all the sites activities, its town centre location is fundamentally linked to many other local business and the town market continued sustainability.

The auction rooms provide a unique component part of maintaining Tring Town Centres' viability and supporting Tring based economic development. If Tring is expected to grow then business, jobs and economic infrastructure growth needs to be matched, Tring Market Auctions needs to be maintained as it supports this economic ambition of the Local Plan through continued town centre provision of a business that is complementary to local shops and does not provide competition, as would the proposed supermarket.

The Saleroom operates with a permanent staff of some 20 people which includes consultants and additional part time staff during sale days. The venue is a key local employer, bringing training and development and job opportunities for local young people.

The Auction sales deal with all periods of furnishings and collectables, processing over 50,000 lots each year providing an effective and affordable house furnishing option for many local people. It has a growing importance as a recycling centre, particularly when it is estimated over 20 tonnes of furniture timber is recycled every fortnight, which supports the climate ambitions in the Local Plan.

In addition the Auction provides a key income stream to the Town Council reducing precept impact on local residents and contributing to a sustainable model of local government

The Auction provides a service to both the local community and professional organisations throughout the Home Counties and beyond.

Points of Consideration

- It is positioned on a site with a long history of auctions and marketing of stock
- It is an important asset for the Town
- The auction attracts a large number of visitors to Tring throughout the year
- It employs local townspeople
- Town Centres should reflect the distinctive characteristics of a Market Town
- The site would not lend itself as a supermarket, particularly when this proposal is unproven
- The Auction Rooms occupy a strategic position at the head of an open space and wildlife corridor which runs from the Tring Park Mansion vista through to Icknield It is very much part of the local community, supporting many of the Town's organisations and groups

Planning Matters for Consideration

- Brook Street has a notorious reputation for being dangerous in parts where it is very narrow making it often difficult for vehicles to pass
- Tring High Street has introduced traffic calming measures

- It is suggested in the development plan that a supermarket would be served with a new carpark. Bearing in mind the development would include the existing Forge Car Park, does one interpret this as denying the town parking facilities
- Recently, two large planning applications have been refused in Brook Street both in close proximity to TR06, one being the residential re-development of Market Garage and the introduction of a residential development on the North Eastern side of Silk Mill works. In both instances, the reason for refusal included over-development of the respective sites and the dangers of access to Brook Street
- The plan proposals to create new food and drink leisure uses is difficult to understand when there are currently so many retail outlets available in Tring
- It states that any re-development of the site would only be permitted once replacement facilities are provided elsewhere in the town. The only specified new location is in Growth Area TR01 (Dunsley Farm) for the Fire and Rescue There is no detail with regard to the siting of Tring Market Auctions, nor the Local History Museum.
- One can create new buildings but one cannot create history

TR06 is not a redundant site, it forms and important part of Tring Town Centre with Tring Market Auctions and the local Museum providing both business and pleasure to hundreds of people throughout the year.

QUESTION ANY OTHER COMMENT comment	Firstly I would like to object to your timing for these planning proposals during this current pandemic. It is extremely problematic to travel to view sites plans and attend meeting in these extraordinary living conditions due to covid pandemic and restrictions. This will have greatly affected the way people can be contacted and difficulty especially for the elderly who are shielding and many who are not familiar with using a computer and are therefore unaware of these new planning developments. I feel that this is a crafty manoeuvre by Dacorum Borough Council! to pass this with little protest.

QUESTION ANY OTHER COMMENT comment	<p>INFLUENCE OF COVID-19 PANDEMIC</p> <p>The Covid-19 Pandemic has already had serious and disastrous consequences for health, life and the economy. Future effects/implications are unknown but surely need to be considered. It seems extremely short sighted to be pushing forward a Local Plan to cover Dacorum until 2038 based on pre-Covid-19 data and circumstances. To avoid a complete built-in obsolescence of the Local Plan, it would seem sensible/logical to delay even the consultation of the Local Plan, in order to reformulate it in light of the Covid-19 Pandemic and of the changes to the government algorithms used to project housing need (see 2.12 below). Continuing with the Local Plan in its current form feels like <i>'burying bad news'</i>, as people are so concentrated on the Covid-19 Pandemic that they don't have the emotional resources to properly scrutinise and challenge a complicated document such as the Local Plan.</p>

QUESTION ANY OTHER COMMENT comment	<p>am writing to lodge my objections to the Dacorum Local Plan. This is a seriously flawed and damaging proposal in many ways, some of which I will outline below.</p> <p>Basic Concept</p> <p>This plan is based on an alleged need to increase the housing count in the Borough by 25% involving an increase of 16,600 units. However, this appears to be based on ONS estimates for 2014 which have been later amended (in 2018) to only 500 per year – a very substantial reduction. This lower figure should be considered as the very maximum target.</p> <p>Green Belt</p> <p>The plan proposes the destruction of a very large amount (2,000 acres) of Green Belt and open land. This is totally unnecessary as the 500 additional units per year can be provided with careful use of brownfield sites, leaving the environment unaffected. The Vision uses the misleading idea that the construction of the proposed Hemel Garden Communities would deliver “green spaces”, but fails to explain that these “spaces” will be replacing open, truly green spaces. In short, the open land designated as Green Belt will be under concrete – it will not be any longer a “green space”.</p>

Road access

The Plan includes the construction of a road linking Junction 8 of the M1, via the Hemel Garden Communities to the B440, Leighton Buzzard Road. It notes that this will provide a replacement link to and from the M1 from places such as Berkhamsted and Tring. However, the road is not planned to go any further than the Leighton Buzzard Road. In short, it's a road leading to nowhere, as the onward links to other places are currently over used and inadequate. And that is as it is without this development. Channelling additional traffic away from the A414 would be an environmental disaster for the locations through which this extra volume is presumably expected to flow. Going via Potten End to Berkhamsted, for example, offers no route onward to the A41 that does not involve a weight restricted or low bridge, single carriageway, or progression through residential roads.

Public Transport

Current public transport provision in this area, especially near to the proposed development, is already best described as woeful. Bus routes and frequencies do not encourage their use. The Plan uses weasel words to suggest that there will be something, as the transport proposals are being developed. This is not good enough – a plan needs to be a coherent whole concept – not a piecemeal mish mash, with parts of it to emerge at some undefined later stage.

Water and Sewage

It is well known that water provision from the aquifer is already under pressure. In some places in the area, there is over extraction. The volume of additional housing is unsustainable in this context.

In a similar way, sewage treatment is already inadequately provided. In Potten End for example, Thames Water continues, as it has for years, to do nothing to stop raw sewage overflow into local gardens.

Thames Water is currently breaking regulations and discharges raw sewage into local chalk stream rivers, with very serious environmental and potential public health consequences. It has been doing this for quite some time.

Any document that proposes such a huge increase in housing in the area, must include a detailed plan on how the water and sewage provision will be safely and sustainably met.

QUESTION ANY OTHER COMMENT comment	<p>The main issue I have is with the requirement that Berkhamsted should absorb a c 30% increase in population over the plan period.</p> <p>There does not appear to be a really well thought out plan - with respect to the Council's officers - to ensure that the infrastructure can support this in terms of schools, water, green transport, central area parking for shoppers, medical resources, amenity / green spaces and similar supporting facilities.</p> <p>I do not see any emphasis on an enlightened local transport policy, i.e. providing environmentally friendly and sufficiently attractive public transport to dissuade people from using their vehicles for journeys to the town centre. The suggestion</p>

that enhanced pedestrian and cycling facilities will meet these needs is plainly ridiculous. Who in their right mind would be prepared to carry heavy shopping a mile uphill from the town centre to the new developments?

The inclusion of this sort of response to the problem indicates the underlying problem - the Borough do not have an adequate response to the pressure of central Government, other than to capitulate to their unreasonable requirements.

QUESTION ANY OTHER COMMENT comment

To Whom it may concern,

Having found time to read the lengthily local plan, and supporting documents, and as a resident of Woodhall Farm for approx. 10 years, and Hemel Hempstead all of my life, I have the following responses to the plan.

Countryside

Throughout this plan you talk about the excellent green belt and the environment, with lots of green spaces.

You also talk about protecting the character of the countryside and later on that the countryside and other small villages will be protected from development.

However, when looking at the actual plans it seems to destroy over 850 hectares of countryside and green spaces, and have a dramatic and unnecessary impact on Green Belt. The consequences of the over-development proposed in the strategy is contrary to national policy, the Strategy's own policies, and both the Chilterns Conservation Board (CCB)

Management Plan 2019-24 and its Position Statement Development Affecting the Setting of the Chilterns AONB 2011, revised 2014.

Housing

The proposed level of housing is based on outdated 2014 population and housing data and overstates the housing need by around 50%, when compared to using more recent 2018 data. The proposed strategy prioritises meeting an excessive level of housing need over protection of the Green Belt on the assumption that this is required by a national policy. I don't believe these are exceptional circumstances where we need to have been belt released. The housing proposed to the north of Woodhall Farm, all be it protected until 2038, recently flooded, so I would like to see if anyone has carried out a recent flood risk survey on the farm land. With the covid-19 epidemic, it may also release more brownfield sites for development, as-well-as the Windfall completions that will occur from recently expanded permitted development rights.

Infrastructure

I do not believe the proposed strategy and those elsewhere in Hertfordshire and in neighbouring Buckinghamshire have been fully considered. During the Swallowdale/Spencers Park phase 1 development, of around 360 houses, there were concerns raised around Traffic and Schools. Surprisingly these would only be addressed with the phase 2 part of the project that hasn't happened yet and doesn't seem likely. In the plans, I believe there was a budget for around £250k from the developer, matched by the council or Herts Highways/Ringway for improvements to Three Cherry Trees, Swallowdale Lane and Redbourn Road. This seems to have now been superseded by a large trunk road connecting Green Lane to the A5, the north east relief road, again through farm land. The St Albans Submission Local Plan has recently been withdrawn from Examination as the Inspectors advised that it would not be found 'sound'. The proposed sites north of Hemel Hempstead in Dacorum must be called into question, along with the north east relief road.

During the building and occupation of the Swallowdale/Spencers Park phase 1 development, I looked for a new job based in the other direction (Milton Keynes) due to the impact on my journey to the M1 and M25(Maple Cross). I also note that the traffic surveys carried out were done so during half term, when lots of families wouldn't have been commuting to work.

Our schools around Woodhall Farm are full to the brim, with some families having to transport their children to schools on the other side of Hemel Hempstead.

The strategy is largely silent on new sources of water required to meet the demand from the proposed new developments and on the significant investment required to move and treat wastewater.

Downgrading of Hemel Hempstead A&E to urgent care meaning the nearest A&E's are Luton or Watford, large centres themselves.

There is no doubt that affordable new and redeveloped housing will be needed, however this should not be at the detriment of the countryside, or the area's near them. Woodhall Farm isn't really classed as in the countryside, but the countryside is very easily accessible. The large scale of this plan, almost obliterates the areas such as Woodhall Farm and Grovehill into North Hemel Hempstead.

Relieve the pressure on the existing infrastructure from the developments already compiled/underway.

Re-evaluate the browfield and windfall sites post-coved.

Regards,

Richard Lythaby

QUESTION ANY OTHER COMMENT comment

- The consultation methodology has been extraordinarily poor.
- I only learnt about the consultation by accident.
- I did not receive a brochure. Planning advised me that they were aware of gaps but did not know exactly where the gaps were. Residents of New Road and Bridgewater Hill were some of the residents missed. How can the consultation be legitimate if residents close to one of the building proposals don't receive the brochure?
- Consultation during a pandemic is a very flawed process. How can we work as a neighbourhood in our response when we cannot communicate with our neighbours safely?
- Many neighbours may still not be acquainted with the local plan as a result
- The effect of Brexit alone cannot be predicted but layer on the pandemic and the future is hugely uncertain. A local plan for 18 years is meaningless and the Green Belt is at risk of being lost for reasons that are no longer relevant

- The local plan would benefit from being over a shorter term or even interim until the future is clearer
- Save our Green Belt

QUESTION ANY OTHER COMMENT comment The basic premis of this plan is flawed. There is no reason for growth on this scale except to increase revenue for Dacorum at the expense of local communities. An enormous amount of money has been spent to promise great outcomes that will not be delivered. DBC is supposed to serve the people of Dacorum, not the other way round.

QUESTION ANY OTHER COMMENT comment	The entire framework for this review is based upon re-visitng housing targets which I believe are now out of date so far as Dacorum is concerned. The whole thinking of Central Government is to move infrastructure planning and employment opportunities further north in an effort to even out opportunities throughout England. This proposed Strategy does nothing to support that aspiration and should be abandoned

QUESTION ANY OTHER COMMENT comment	<p>Finally, I raise a concern regarding the way the consultation has been organised and the information made available to residents. Covid restrictions have prevented this information being available in suitable public spaces, and an extension for accepting comments of one month during lockdown restrictions is inadequate. Plans with such wide ranging impacts on a borough should be made available to all residents of the borough for due consideration.</p> <p>The online means of displaying the proposal documents is also not fit for purpose. Creating a 'virtual physical space' to browse documents is an incredibly poor and impenetrable user experience. Making information easily available in a web-browser, with better indexed and searchable information is a far more appropriate means of displaying vital information. I worry about the decision making that has gone on to spend time on this 'fake' physical display when better provision of information should have been considered.</p> <p>I trust that these objections will be duly noted and considered with all the other objections that I expect you to receive from across the borough. I urge you to reconsider the plans you're making with consideration of all the above points.</p>

QUESTION ANY OTHER COMMENT comment	<p>The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).</p>

QUESTION ANY OTHER COMMENT comment	I would like to send this response to both my local councillor (Penny Hearn) and MP (Gagan Mohindra). Despite an election just over a year ago and the impacts of the COVID crisis he has not been visible to us in Tring. Furthermore, if this plan goes ahead unamended we will find it very hard to vote Conservative ever again. It is ill thought through with no visible supporting statistics behind it and shows no interest or concern in the existing communities in the small Market towns of the area. We think you have been bullied into this approach.

QUESTION ANY OTHER COMMENT comment	The profound scale of the climate and ecological crisis, requires radical new thinking. Simply building more and more homes, and more and more roads will do nothing to help humanity survive the growing catastrophe and will only make the crisis more extreme. Therefore, it is incumbent upon Dacorum to take this opportunity to break away from old patterns of thought - halve the number of new homes envisaged and look to drive human journeys away from roads and onto cycle paths, as well as onto footpaths.

QUESTION ANY OTHER COMMENT comment	Dacorum promotes the laudable aims of promoting sustainability and biodiversity and yet in the current plans also says that it wants growth and new homes at a large scale, as well as new roads. Unfortunately, these aims are mutually exclusive. If Dacorum really wishes to promote sustainability and biodiversity, it must halve the number of envisaged new homes and commit to encouraging people to make more journeys on foot or by bike.

QUESTION ANY OTHER COMMENT comment	<p>Questions any other comments. The consultation for this plan is taking place at a totally inappropriate time. The world is struggling with the massive devastation caused by COVID and we are being expected to respond to a planning consultation which will affect people's lives for years to come. Most people are struggling to work whilst having to home school children and shield and support older relatives. Does the council not think people are struggling enough with out expecting them to respond to this consultation as well. It has taken me most of the day to complete this on top of an already stressful time dealing with everything else that is going on at the moment. Most of the town don't know what is going on with this plan and those that do haven't got time to deal with it appropriately. Perhaps that is the plan that all this development slips under the radar whilst people are busy dealing with the COVID side spin. The timing for this is a disgrace and as politicians I don't understand how you think it's appropriate with everything else that's going on to expect the public to engage with this consultation. We are on our knees. On top of that we have no idea at the moment of the change in our lives and how we work that has been brought on by COVID (people want space, gardens and rural locations yet you are insisting on building on our green space and ramming in loads of houses with no doubt tiny gardens). We have learnt that highly populated areas spread disease faster so do we really want to develop highly populated areas with no green space of any size. Along with the changes of less immigration from brexit which also haven't been considered. There is a strong undertone in this plan of developers wanting to build houses in areas where they know they will sell well and make a big profit. No regard for the towns and environments they are destroying. I'm am disappointed by the lack of support from all our councillors and MPs (despite their party loyalties) in preventing this dreadful proposal being pushed through. It's this sort of thoughtless money grabbing development that is damaging our environment irreparably and forever.</p>

QUESTION ANY OTHER COMMENT comment	The strategy for Berkhamsted and Tring relies too heavily on developing expensive two storey dwellings rather than more affordable higher storey properties on brownfield sites.

The reliance on speculative developers to carry out this work will do nothing to ensure the affordability of housing, the plan does not protect against the risk that property prices will be artificially inflated by developers banking land, and/or building properties which are unaffordable to people who work locally.

This plan will create housing but will destroy great swathes of countryside. Properties will not be affordable to people working locally and the developments will draw in new commuter residents. The plan will not solve the housing shortage experienced by local residents and workers.

The number of dwellings proposed exceeds that which is sustainable for the combined capacity of the market towns of Berkhamsted and Tring. The infrastructure of these two areas is interlined and interconnected. In terms of transport, their High Roads are linked by the main routes between the towns and the main arteries into the towns. They both also rely on the A41, the same train line and shopping facilities. There is no local hospital between the two towns. The two towns share the same bus routes. The delivery strategy takes no account of the combined pressure on the infrastructure which would be created by the combination of the proposed large house building projects in both Berkhamsted and Tring.

The main Berkhamsted developments are at the edge of town. As Berkhamsted is in a valley, most residents in those developments will need to use private passenger vehicles to travel into town and in order to connect with public transport hubs. The proposals in these locations are for family homes and retirement properties. It is not practical or realistic to expect families or elderly residents to travel by foot or bicycle from these developments. Furthermore, the routes into town and to the railway station from the proposed sites are through narrow residential roads with on-street parking. The proposed sites will cause immense congestion on those roads, increasing pollution and hazards to pedestrians.

In the case of Tring, the amount of housing and the potential area affected is very significant and includes the addition of 2,731 new houses, 1 new secondary school, 2 new primary schools, and associated retail, sport and industrial developments – almost doubling the size of the town. This equates to a 55% increase in houses for Tring, mostly on Green Belt land.

The proposed developments on the Green Belt, particularly in East Tring, are not connected with services or the town and will therefore have a considerable impact on the environment, air quality and GHG emissions.

QUESTION ANY OTHER COMMENT comment	I am opposed to the building of new housing on green belt land, I understand that the formula used for calculating the number of houses to be built is flawed and that Dacorum should have changed its strategy when the government did so, . The number of houses proposed for Tring is far too high, it will put a huge strain on our small community and wastes essential farmland and acres of AONB in the chilterns. This level of building will overwhelm and irrevocably change the town of Tring for the worse. A large reduction to the proposed number of houses and using brownfield sites should be the chosen route. I do not think that Dacorum borough council has properly addressed the impact to the environment, infrastructure and climate change and biodiversity (particularly Chiltern Beechwoods SAC). I request that this strategy be urgently reviewed.

QUESTION ANY OTHER COMMENT comment	BRAG is a member of the 'One Voice Alliance', a collection of organisations who, despite having different priorities, all share serious concerns and strong objections to the DBC Local Plan. We are all completely dismayed by the approach taken by Dacorum's Planning Officers and apparent endorsement by many of our local Councillors. The mission statement of the One Voice Alliance is: <i>'We, the Chiltern Society, Chiltern Countryside Group (CCG), Grove Fields Residents Association (GFRA), Berkhamsted Residents Action Group (BRAG), Kings Langley & District Residents Association (KL&DRA), Berkhamsted Citizens</i>

Association and Tring in Transition as the 'One Voice' Alliance, oppose the 'Dacorum Local Plan - Emerging Strategy for Growth' because:

- 1 Whilst the policy on biodiversity is clear, the emerging plan is not explicit enough in terms of **how** Dacorum Council will work with developers and other stakeholders to mitigate Green Belt loss, increase biodiversity and meet National and Hertfordshire's goals for climate change and carbon reduction
- 2 The proposed number of houses to be built should be significantly lower than the target to reflect **actual demonstrable need** for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes
- 3 A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and **away from areas located in the Green Belt** (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.

While not members of the Alliance, the Chilterns Conservation Board and CPRE Hertfordshire are working closely as advisors to the One Voice alliance."

There may have been some foermating issues during the process of responding through this portal (particularly for the sites section), so to avoid any confusion and for accuracy a pdf of BRAG's official final response is attached.

QUESTION ANY OTHER COMMENT comment	I am very concerned that amongst the wider Dacorum community there is a general lack of knowledge about the local plan and more importantly that the consultation period for it is about to close and as such people have missed the chance to comment on their future. I was under the impression that an awareness campaign was due to be in place but as a resident, I have received or seen nothing highlighting the consultation.

Additionally, I am very technically literate but have found the process of commenting very time-consuming and difficult. For most people without the time or means to comment this will drastically reduce the amount of feedback people will give which is not the same as people agreeing with the plans.

Due to Covid restrictions it has not be possible to engage and inform people with events such as:

- Door to Door canvassing of the local plan consultation
- Interested parties to meet and canvas at the various town markets

Covid restrictions have impacted

- Our ability to attend Council Meetings in person rather relying on access to online forums
- Residents being able to meet and consider responses to the local plan

The Government has asked all of us to restrict our interactions with the general public as it is both irresponsible and unlawful to do otherwise.

The council should extend this consultation by many more months, until the current crisis is over and an additional subsequent period be provide for the full engagement by all Dacorum residents.

I feel the strategy has failed to take account of a number of important issues or has diminished their significance, most importantly - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth should be balanced against and not override environmental concerns and climate obligations.

QUESTION ANY OTHER COMMENT comment Relating specifically to Tring, as the town seems to be bearing the brunt in percentage terms of the increase in housing numbers, we object strongly to this plan as we believe it will completely overwhelm Tring, put excessive strain on all aspects of our community and overload local services. We are particularly concerned that the additional traffic brought about by this huge percentage increases in the population of this lovely market town.

Emotionally, we consider that Tring, being sited as it is, an appendage to Dacorum, is often treated as an afterthought, for instance even in the Dacorum Digest it is hard to find the half page or so devoted to Tring.

These plans will destroy the Tring we love, it is not a case of NIMBY-ism, but in our opinion the plans for Tring are nonsensical and far in excess of both realistic needs and what the town can absorb.

We consider that the Plan is based on out of date figures for housing stock requirements.

We have been advised that 2014 projections for housing needs have been used, although the more up to date 2018 figures show a lower requirement, this by a significant amount.

QUESTION ANY OTHER COMMENT comment	<p>My overriding concern is of the construction methods, materials and infrastructure. With the government currently issuing green grants to have homes concerted from gas it is imperative that NO natural gas is used in these new builds. Air or ground source heat pumps should be used, as current available and recommended technology. Solar panels must be fitted to all properties. Other materials (wood, bricks etc) must be sustainably sourced.</p> <p>We are facing a climate emergency, and these proposals remove any responsibility from the developers, shift it to the new home owners and defer facing the issue for a few more years - which we do not have. The emergency is now. The development needs to be focussed on promoting walking and cycling and local community.</p> <p>Finally, there is a lack of considreation of biodiversity, wildlife and pollinators. These are not secondary elements to development but should be integral to the design.</p>

QUESTION ANY OTHER COMMENT comment	Given the covid pandemic and the current lockdown the traditional methods of communication with the residents regarding consultations such as this are not currently available. There are no physical displays in places such as town halls, libraries and council chambers for people with no internet access or facilities with computers to review these plans. As such many residents do not have a fair and equal opportunity to read this consultation or even be aware it exists.

I was not aware of this until a developer put leaflet in our mailbox one day and only then registered online which is necessary to receive any updates from the council. Thus the manner in which the council is conducting this consultation discriminates against the following groups of people:

- Residents who cannot afford computers and or access to the internet
- Elderly residents who either do not have computers or the skills to navigate the internet and this portal
- Residents with no computers who are currently shielding due to the pandemic and are not leaving their homes as per government advice

This consultation should be extended until the pandemic is over to ensure ALL residents are given an opportunity to review these plans, not just the wealthier residents with computers and internet access.

QUESTION ANY OTHER COMMENT comment

Recently there has been a proposal put forward to the residents of Bovingdon for a development off Louise Walk, Green Lane, Bovingdon. They are strongly emphasising the benefits to the community by building a scout hut, but this appears to be a rather opportunistic inducement to gather local support for the development. The proposal is inappropriate for the size of the site, its location and access point. Louise Walk is a single width cul de sac off Green Lane and next to the turning for the football/tennis club and any extra traffic would seriously impact Green Lane and the High Street. Cars are always parked along Green Lane when football is being played. The scout hut would benefit only a very small section of the community,

My husband and I do not approve of this proposal.

There should be no new developments built along Green Lane up as far as Bovingdon Green.

he Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	By separating all the different sections for comment makes it incredibly difficult for average citizens to comment on an overwhelmingly complicated housing development plan. Most people in Berkhamsted have one overall comment to make which is that the housing development laid down across the areas is far in excess of what the area and infrastructure and geography of the area can cope with. Smarter people than me have read every detail of the plan and sought expert advice on the impact on wildlife and the raw data used to model the future housing needs in the area and I hope they are correct and that you listen to their advice. I can say that I know that simply the Bearoc Park development has already had a massive impact on the traffic on Shootersway to levels that are comparable to Central London on a busy day (where I used to live). The road is no longer safe for my kids to cross. I can't imagine what it's going to be like when thousands more houses are built just off this road. It's unthinkable. as a resident, it really doesn't look as though anyone in charge of the plans has any idea of the geography of the town. I implore you to think again and revise your plans to save the green belt, stop unnecessary pollution, maintain wildlife in the area and prevent bringing the town to gridlock.

QUESTION ANY OTHER COMMENT comment	I am writing to you to strongly oppose the building of the houses at the top of Bell Lane and Shooters Way. The people who will be living in these houses will be using Bell Lane which is a single track lane to drive into town. This road is already dangerous and too many drivers use this as a short cut to the town or local shops such as Tesco or Westfield store or taking children to school such as St Mary's. The traffic congestion along Granville and Westfield Road is already ridiculous, so much road rage and there was a bad accident this weekend, even in the evening. There is an important safety issue regarding transport and public safety trying to cross the roads. Therefore there is not the infrastructure of roads, schooling, health care such hospitals, social centre and leisure centres, the town is extremely congested every morning.

When I walk up Bell lane there are lots of wildlife that live in the trees and the field you are planning to build such as hedge hogs, bats and owls which are protected

Also there is a big push to plant more trees, you will be cutting down numerous trees, as per David Attenborough how can this be allowed.

This plan will have a negative impact on the carbon footprint, Greenhouse gas **emissions** from transportation primarily come from burning fossil fuel for our cars and trucks. My family and myself have asthma and breathing issues already how can more houses and more cars in Northchurch help the health of the residents of Northchurch.

What will the price range of these houses be? I imagine they will be extremely expensive and not even an option for our children to set down their roots, it will be for people moving out of London.

I do hope you review the plans and I look forward to hearing from you soon.

Yours sincerely

Toni Egan-Perry

QUESTION ANY OTHER COMMENT comment	<p>As with many other commenters here, I am fully against the huge scale of the proposed development, on account of sustainability, personal health and the health of our communities, and ecology. There have been continual mentions that biodiversity would be 'improved' through development - this is incredibly vague and not encouraging in the current time of climate disaster. Covid has taught us that our local countryside is more important than ever - I have personally seen huge increases in footfall in areas like Ashridge and other countryside areas that adjoin our towns - much of which would be destroyed under this current plan. The current plan fully runs against the Chilterns Conservation Board Management Plan 2019-24 and will see a huge increase in pollution from construction and personal vehicles, and will see the quiet country town nature of places like Tring and Berkhamsted entirely changed for the worse. Infrastructure will be massively strained beyond what it already is - and it will also likely affect our water supply. This will be taken from the Chiltern Aquifer, an incredibly important source for our chalk streams, an internationally unique and ecologically irreplaceable habitat.</p> <p>I appreciate that the net zero carbon emissions target of 2035 is mentioned, however I find it hard to see real evidence of actual adherence to this target with this emphasis on unsustainable growth. I would like to see renewable energy solutions be brought to the forefront, and instead of proposing vast areas of urban settlement far to the excess of actual population growth figures from the ONS, I would like to see a renewed invigoration of the countryside, with the creation of more protected areas, and tree planting and meadow creation schemes. The relationship between residents and the surrounding environment is an important one which was strengthened during the lockdown as we looked to the fields beyond our houses for an escape from our homes. The countryside around Hemel is a hugely important resource for local residents, and to take this away is an ill thought out and incredibly sad outcome for Dacorum.</p>

This may be an out of the blue point but I would also like to comment on the accessibility of this website itself: I'm a young person and still found it hard to work out! If this site was a little more clear and accessible, and less of a maze to navigate, I feel we could have had more people here have their say.

The consultation has taken place while the entire country was in lockdown during the winter. Many people in Berkhamsted and Northchurch have no idea about the Local Plan or what it means for our town. Other people have been fully occupied with trying to home-school their children and trying to work from home. They have no spare time to look at the complexity of what is being planned.

Please stop the consultation, do your sums again, and consult again when the country is back to normal in the summer.

QUESTION ANY OTHER COMMENT comment	<p>As a resident of Granville road I am concern that it is already a rat run for cars trying to avoid the already busy Northchurch high street, racing along to drop kids off at all the schools, the social centres activities, church nights activities. The proposals for Darrs and Durrents Lane are not sufficient to cope with the amount of new traffic from the new housing wanting to access the town and Northchurch Tesco . I have already witnessed a head on collision outside my house from cars that do not have enough room. It is unacceptable to put the risk of more accidents and road rage outside our houses. Especially when so many children walk this route and cross these roads for school. Plus the almost certainty of damaged cars from those trying to reverse back and squeeze past etc.</p>

QUESTION ANY OTHER COMMENT comment	<ul style="list-style-type: none"> • Currently Tring School secondary places are being squeezed and, under the distance ruling in the Admissions Policy, children who live in outlying villages, who have traditionally had a place at Tring School, will struggle to obtain a place in the near future. • Tring School is oversubscribed by two and a half applications for every one place. • Tring School is part of the RLP and we are well-placed to manage the potential expansion of primary and secondary provision in the town. • RLP would be very interested in expanding the primary and secondary provision. • RLP will be keen to engage in sustainable schools to keep the carbon footprint low. • RLP will be very interested in delivering the expanded sports provision for the town. It would make sense to put all of the sport together and run it under Tring Sport and Leisure Limited. • Tring School is currently in the midst of constructing a new “state of the art” school in the centre of the existing campus. This development is part of the DfE PSPB2 programme and is valued at approximately £30m which includes a substantial contribution from the school to enhance pastoral and leisure facilities. We believe that the experience and knowledge gained from our significant contribution to the design and efficiency of the buildings will make us excellent partners for the new school developments included in the DBC proposals.

- Tring School and the Ridgeway Learning Partnership also operate the wholly owned trading subsidiary, Tring Sport and Leisure Limited. TSLI worked closely with DBC in refurbishing the swimming pool and since taking the facilities over in 2019 has demonstrated a strong understanding of the leisure marketplace and has significantly expanded the offering beyond the swimming pool and astroturf pitch. In early 2021 a new 4 court sports hall will be available for community use as well as a modern activity studio. If/when a new sports hub is to be developed in Tring we believe that it should be under a single management in order to offer broad and cohesive leisure with ALL profits being reinvested for the benefit of the children and the further enhancement of the leisure offering.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield

land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

Several organisations have come together as One Voice to present the views of Dacorum residents, especially in relation to Berkhamsted, Northchurch and Tring. I support their detailed submissions regarding the Local Plan. They have analyzed the Plan in a way which individual residents are quite unable to do in the main.

These include BRAG, Grovfields, CPRE, The Chiltern Society etc.

I have added my comments as emphasis to what they have already provided.

I still object to the consultation process going ahead in the pandemic lockdown. I believe the Government would understand that this is unreasonable given the problems residents are experiencing in other areas of their lives. We are all stressed

and may also be bereaved, worried about vulnerable family members, worried about health, money, employment, home schooling, suffering from isolation and mental health problems.

I wrote to the Strategic Planning department early on and was advised that it was important to get our Plan submitted to prevent speculative developers having the upper hand. I suggest that the Government would be prepared to negotiate about timescales for the Local Plan given the extraordinary difficulties both staff and residents have had to engage properly in this task.

Many residents are still unaware of the Local Plan and how it will affect their quality of life. I did not receive the brochure publicising the consultation process which, in any case, was sent out very late in the extension of the process. Many of my neighbours are in the same position and have limited access to computers and sufficient knowledge to participate. The form and the portal actually are not synchronised and I suddenly found so many more issues to comment on.

I fully appreciate that planning authorities have to plan ahead and can't wait for all the information about changing circumstances to be available. However, I would argue that a pandemic of this scale is life changing and we have never experienced this kind of situation in peacetime before. For this reason, I think we DO need to pause and take account of the long term effects of the pandemic to where people live and work.

The Government's stated policy is to level up the North and South divide through major investment and development in the North of England. The reduction in the population in London is already hollowing out the demands for development there and this must also be reflected in the commuter belt shires like Hertfordshire. When families can get pleasant 4 bedroom houses with a decent garden for affordable sums (£230k), why would they want to pay £800k for an executive home on a postage stamp plot in Berkhamsted?

Robert Jenrick has already signalled his serious intention to move major developments North through a section of his department moving to Wolverhampton. This is encouraging and should indicate to Hertfordshire that the pressure on our densely populated towns can be relieved to some extent.

Please can Borough Council take this on board in its revision of the Local Plan?

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship

with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

It will be clear from my responses that I am opposed to the draft Plan, but I would also like to express my disappointment on a number of counts:

That the Council have made no attempt to challenge what they believe to be Central Government's assessment of housing need in the Borough

That at a time when the Country is undergoing a major upheaval the Council was not prepared to pause the process of consultation which would have given further opportunity to assess the real needs of the Borough but also avoid disenfranchising many residents who cannot or are reluctant to access the internet for such matters

That it is very difficult to fully absorb all the documentation accompanying the consultation document which is an extensive document on its own right

The likely cost to ratepayers of producing the draft Plan including the employment of a lot of consultants

Overall that while many draft policies maybe worthwhile the growth targets being promoted directly conflict with these policies

QUESTION ANY OTHER COMMENT comment Failing to change the DBC Local Plan to take account of these objections, will render many consequent planning actions to be open to judicial review, delaying action, incurring huge cost and generally wasting time, money and effort that DBC can ill afford. The strength of local option and the weight of objections should cause DBC to pause, reconsider and update its plan based on up-to-date and more relevant data. DBC should listen to its residents and push back on the Government's housing targets for our area, making the legally valid case that these targets are based on the wrong data.

QUESTION ANY OTHER COMMENT comment Overall the plan is going have significant impact upon the lcoal community and leisure options. Berkhamsted football team is going to severally affected witht heir proposed move.

The whole plan smacks of trying to ruin the beautiful and historic towns of Berkhamsted and Tring, without any consideration given to existing residents and their surrounding. Berkhamsted does not need an extra 2500 housing units. The area on which the proposal are being built are greenbelt land which provides natural beauty.

I oppose the proposal complete it will ruin the whole community and have a negative impact upon house prices etc.

QUESTION ANY OTHER COMMENT comment

With encroachment on greenfield and natural floor plan sites I struggle to see the consideration for protecting and conserving the natural environment. The UK is the highest deforested country in Europe with only 17% this goes against this and the climate change manifesto. Impacting natural animal routes and quiet protected spaces only forces greater impact on the local wildlife and with sizable projects and lack of infrastructure and services this worsens already congested areas and "rat routes". Looking to BareRock Berkhamsted this has already impacted school places as well as congestion in the small local community of Northchurch and further development of the size is not fit and merges localised lines and boundaries. Roads, infrastructure, medical care, hospital facilities are all at breaking point and adding a further unstructured adhoc sites compounds this. Although there are considerations to the plan an approach such as Thakams is far more thought out, combined and addresses key considerations on flood planes and overall impact.

Current rate do not support businesses in the Berkhamsted community, infrastructure and services are poor or poorly maintained and the plan is both outdated and ill consulted. As example this closes 28/02 and the first correspondence received was 24/02.

QUESTION ANY OTHER COMMENT comment	<p><i>For Tring, the difference between this plan being unacceptable as it is currently, and being acceptable as it could be is:</i></p> <ul style="list-style-type: none"> <i>Reducing the numbers of new housing to no more than 500-750</i> <i>Incorporating a significant improvement in infrastructure especially facilitating significant expansion of existing sporting facilities and playing pitch space</i> <i>Developing primarily the Dunsley Farm Tr01 site as a mixed use economic and housing site but combined with around half the site given over to new sporting facilities – and the addition of a school (if required) adjacent to the new sports playing space.</i> <i>As well as developing the TR01 site as above – development could be acceptable in Tr02, Tr04 and Tr05 if essential and supported by appropriate additional infrastructure development.</i>

For Dacorum as a whole, I am concerned that with the vast expansion of housing/population in Aylesbury Vale close to Dacorum (in Aston Clinton, Halton and Weston Turville) when combined with the increases in the West of Dacorum (HGC, Berkhamsted and Tring) there will be immense pressure on the local infrastructure in both Boroughs. I am especially concerned that there is no accompanying plan for increased hospital capacity in either Borough (indeed a downsizing is proposed for Hemel Hospital). Stoke Mandeville Hospital which services the needs for most in Tring is already stretched and we may find its services no longer available to residents of Dacorum as a result of the development around Aylesbury straining its resources. I consider therefore that additional hospital resources are a critical infrastructure priority.

QUESTION ANY OTHER COMMENT comment

For Tring, the difference between this plan being unacceptable as it is currently, and being acceptable as it could be is:

- Reducing the numbers of new housing to no more than 500-750*
- Incorporating a significant improvement in infrastructure especially facilitating significant expansion of existing sporting facilities and playing pitch space*
- Developing primarily the Dunsley Farm Tr01 site as a mixed use economic and housing site but combined with around half the site given over to new sporting facilities – and the addition of a school (if required) adjacent to the new sports playing space.*
- As well as developing the TR01 site as above – development could be acceptable in Tr02, Tr04 and Tr05 if essential and supported by appropriate additional infrastructure development.*

For Dacorum as a whole, I am concerned that with the vast expansion of housing/population in Aylesbury Vale close to Dacorum (in Aston Clinton, Halton and Weston Turville) when combined with the increases in the West of Dacorum (HGC, Berkhamsted and Tring) there will be immense pressure on the local infrastructure in both Boroughs. I am especially concerned that there is no accompanying plan for increased hospital capacity in either Borough (indeed a downsizing is proposed for Hemel Hospital). Stoke Mandeville Hospital which services the needs for most in Tring is already stretched

and we may find its services no longer available to residents of Dacorum as a result of the development around Aylesbury straining its resources. I consider therefore that additional hospital resources are a critical infrastructure priority.

QUESTION ANY OTHER COMMENT comment

Tring Rural Parish Council welcome the opportunity to contribute to Dacorum's New Draft Local Plan and Emerging Strategy for Growth 2020-2038. (The Plan)

We are encouraged that the proposed policies maintain and support the current Settlement Hierarchy with specific policies for Rural Areas and continue to recognise that the countryside in Dacorum is the least sustainable location for major new development in the borough and therefore will remain an area of development restraint.

We are however extremely concerned that the Sustainability Appraisal suggests that if the proposed release of Greenbelt land for growth fails, for whatever reason, a fallback position of major development abutting Long Marston could be applied. TRPC would not support this option.

We note with interest that The Plan considers Neighbourhood Development Plans will play an increasingly important role in shaping growth in Dacorum's rural areas in the future. Tring Rural Parish Council will give serious consideration to producing an NDP or site-specific Community Right to Build Order/s (Localism Act 2011). We believe that Neighbourhood Development Orders, Village Design Statements, Assets of Community Value and Parish Plans should be encouraged in parishes, thereby ensuring that future development in rural communities is appropriate to the location and encourages sustainability.

Waste Management

Dacorum declared a Climate Emergency in July 2019 and have committed to reducing carbon emissions across Council activities to net zero by 2030. The declaration also places key responsibilities on the Local Plan to include all available measures to cut carbon emissions and reduce the impact on the environment.

The Plan goes on to say that the impacts of growth will be reduced through: the prudent use of natural resources; encouraging renewable energy production; the effective recycling of waste; the sustainable design of new development and careful land management.

Tring Rural PC would strongly advocate and support a Service Level Agreement between Dacorum Borough Council and Buckinghamshire Council agreeing a cross-boundary partnership to allow residents of the parish to utilize the facilities of the Household Recycling Centre at Aston Clinton, a distance from the Parish boundary of approximately 1 mile.

This would concur with and support the following;

- Hertfordshire Waste Management Development Framework 2011 – 2026
- Dacorum Sustainable Waste Development
- Dacorum Recycling Carbon Footprint
- Dacorum Cross Boundary Working

Currently residents of the parish use the nearest Borough Household Waste and Recycling Centre in Berkhamsted, a round journey in excess of 20 miles.

To achieve this, we would draw attention to **Buckinghamshire Council Household Recycling Centre’s Waste (HRC’s) Access and Acceptance Policy (WAAP)** 1st August 2020 detailing permitted users of their sites and clarifies access for Non-Buckinghamshire households.

- The WAAP identifies by map, a 7-mile radius catchment area (which includes Tring Rural Parish)
- Policy A5 recognises that in most cases residents will use HRCs that are closest to their household, hence there will be some cross-border use of HRCs.
- Policy A5.2 affirms that the Council may set up Service Level Agreements (SLA) with neighbouring authorities for cross-border access to ensure the costs of provision of the HRC are shared fairly.

QUESTION ANY OTHER COMMENT comment	The Plan lacks ambition. It relies on the doling out of lumps of housing growth with no thought to the impact on the quality of life of existing residents and the long term health of the communities affected. Adding growth on growth in the same places results in destruction of the locations targeted. A more visionary approach would prioritise the development of new centres of housing, employment and infrastructure.

QUESTION ANY OTHER COMMENT comment	I've never read such a load of flapdoodle eyewash in my life. All that overloaded management-ese trying to justify concreting over acres of green belt land with meaningless references to "biodiversity" and "sustainability". This is Newspeak - Orwell foresaw this. The Tory government has brought this about to cope with a growing population - even though the atrocious Tory Brexit was promised to bring it all under control by closing the country's borders. Maybe it's time to start hadning out free contraceptives? The people won't forget who did this to the country - as the bulldozers start rolling across the bucolic idyll, any Tory councillor had better have their CV up to date. Clear your desks.

QUESTION ANY OTHER COMMENT comment	<p>Dacorum Environmental Forum (DEF) welcomes the considerable effort put into to drafting a detailed plan, and applauds the emphasis given to combating climate change, enhancement of biodiversity and preserving the unique character of the countryside and the built environment. However, DEF has grave concerns about the general outline and details:</p> <p>(Number references are to the numbered sections in the following "Detailed Comments" section.)</p> <ul style="list-style-type: none"> • In significant areas it is, in its current form, not fit for purpose as a public consultation document, because: • The plan refers to various Supplementary Planning Documents, Action Plans, and Site Allocations that are still in the process of being formulated. The public should not be consulted until these documents are included in the (1, 12, 15, 22)

- The plan includes details of site developments for which planning permission has already been given, but the details given by the developers in order to secure that permission do not comply with the criteria laid out in this draft NLP **(1, 7)**
- The documents and algorithms used to calculate Local Housing Need are out of date, and likely to be revised, so the public are asked to comment on proposals that are no longer justified. **(25)**
- DEF has sight of a letter from Christopher Pincher MP to Cllr. Andrew Williams that Councils do indeed have “wriggle room” adopt lower housing numbers, but DBC do not seem to have availed themselves of this option, or shown any intention to do so. To quote “Authorities should make a realistic assessment of the **number of homes their communities need** as the starting point in the Once this has been established, planning to meet that need will require consideration of land availability and relevant constraints such as **Green Belt**. It is expected that where the need cannot be met through **brownfield land and land in sustainable locations near to transport interchanges then the authority should seek opportunities within neighbouring areas.**” The public should not be consulted until DBC has explored this option, particularly as Cllr Williams has already raised the issue that the housing numbers are too high for this Borough.
- At the adoption of the Draft plan in November 2020, it was agreed that there would be a list of all nature reserves, local wildlife sites and SSSIs, but this does not appear to have been added. There are references in the plan to enhancements to wildlife sites that are not specified by precise locations on a **(8)**
- The DEF submit that even under the criteria of the now outdated algorithm the **total of new dwellings needed by 2036 is grossly over-estimated**, and has not been informed by the guidelines in the NPPF for taking into account local constraints, in particular the Green Belt. **(24, 25)**
 - The plan fails to take into consideration the overwhelming public opinion, and also recommendations by Government-appointed Inspectors, to **retain the Green Belt**. **(26)**
 - DEF is particularly opposed to the Hemel Garden Communities and the developments in North Hemel. In particular, the development on the West side, from Piccotts End to Lovetts End would be a tragic loss of visual and recreational amenity, especially when viewed from North Gadebridge (Halsey Field), and when walking /running from Grove Hill to Gaddesden Row. **(5)**
 - While there are many positive features in the plan, particularly in regard to enhancing biodiversity, reducing carbon emissions, and preserving the visual amenities of the countryside, these are largely **aspirational rather than mandatory**, or fail to recommend the immediate adoption of current technology. In significant ways **major proposals in the plan are directly contrary to these (2, 3, 4, 11, 13, 14, 16, 17, 20, 21)**

We note that HM Government are bringing forward proposals that will require all new builds to be **carbon neutral by 2025**

Quote “The government has set out its plans and timeframe for its new Future Homes Standard which aims to 'radically improve' the energy performance of new homes, making them 'zero carbon ready' by 2025” (Architects Journal 20th January 2021) In the light of these proposals, the NLP must have **much stricter criteria** for planning consent, which must be **adopted at a much earlier deadline**

- The consultation is taking place at a time when we move beyond Brexit and the Covid pandemic, and there is likely to be a societal change in the geographical demands for housing, retail, commercial and industrial **This will render the proposals incompatible with the new conditions of “The New Normal”** Consequently the most contentious and undesirable site allocations should be deleted from the current plan.
- Currently, since the demise of the printed version of “Dacorum Digest” the plan has not been widely advertised to residents, and the local paper is not now widely purchased. Consequently many residents are unaware of the proposals or the consultation, and some residents do not have access to facilities for completing the consultation on line, and libraries are inaccessible due to Covid restrictions. **The deadline for consultation should be postponed** until
 - 1 after the plan has been more widely advertised, and
 - 2 after lockdown has been lifted sufficiently to enable residents to access paper copies and to be able to consult between themselves independently of social media, and
 - 3 the omitted documents referred to below have been
- The plan deals specifically with designating the future use of most of the land in the Borough, **but has little vision for the cultural and social development of the Borough.** With the likely contraction of the retail sector of the economy, and the absence of a focal Arts and Entertainment centre, the future of Marlowes pedestrianised area is bleak, and more creative and imaginative proposals need to be put DBC seem to have reneged on their promise to encourage a “Leisure Quarter” to be built on the former Market Square and bus station. **(6)**
- The local chalk streams are of recognised global ecological importance, but there are no proposals to ameliorate the deleterious effect that extra housing will have on the streams, due to increased abstraction of water from local Furthermore, there are no proposals to improve the water quality by rectifying the pollution from existing storm drains and culverts. **(27)**

- DEF have identified the following clauses and policies in support of these grave concerns; additional concerns are also included in these details. **(8, 9, 10, 20, 23)**

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	<p>The Bulbourne Cross proposals are not included in the local plan, and nor should they be. The company peddling the idea has done massive leafletting in Berkamsted with beguiling images; they are charletons with an eye for the main chance. If their ideas were followed, Bourne End would merge with Berkhamsted and produce yet another sprall.</p> <p>We have to expect and plan for increased use of cars as in most cases they are the most convenient way of getting from A to B in Berkhamsted.</p> <p>There will always be limited opportunities for cycling unless you are on the level; cycling to shop is not very practicable; cycling on the A4251 can be hair-raising for both cyclist and driver, and often most frustrating when attempting to overtake .</p> <p>CPRE report a lot of green field sites elsewhere. Government policy is to encourage development in the North of England; excessive growth in the South (including Berkhamsted) only serves to thwart its desire.</p> <p>I thought I was reasonably intelligent, but I will have to revise my self-perceptions; this consultation has been thoroughly perplexing.</p>

QUESTION ANY OTHER COMMENT comment	Firstly I would like to object to your timing for these planning proposals during this current pandemic. It is extremely problematic to travel to view sites plans and attend meeting in these extraordinary living conditions due to covid pandemic and restrictions. This will have greatly affected the way people can be contacted and difficulty especially for the elderly who are shielding and many who are not familiar with using a computer and are therefore unaware of these new planning developments. I feel that this is a crafty manoeuvre by Dacorum Borough Council! to pass this with little protest.

QUESTION ANY OTHER COMMENT comment	Berkhamsted is busy enough without adding 2200 new homes. This is an outdated survey and does not take into the effects of Brexit and Covid. Destroying the precious green that makes this area so attractive would not only be an environmental disaster but a logistical one too, there is no way the trains could cope, they are busy enough during the rush hour without adding a minimum of 2200 new people using it. The high street is also very busy and although its suggested another Highstreet will be created it will almost certainly create an influx of people to Berkhamsted. Finally the A41 is very busy during peak times, how do you expect it to cope with 2200 new people driving up and down it?

QUESTION ANY OTHER COMMENT comment	<p>It is important to comment on a proposal by Thakeham to create Bulbourne Cross (Footnote 56 – https://www.bulbournecross.co.uk). While this area does not currently feature in the draft local plan, the developer is arguing for its inclusion in place of other Berkhamsted developments.</p> <p>It would be a serious misjudgement to add this site to the Draft Local Plan as all the arguments in section 1-3, 6, 7 and 8 in the response to question 5 apply but their impacts are even more extreme given this site would provide over 20 times the number homes of Bank Mill Lane or 22% more homes than Bank Mill Lane and the area south of Berkhamsted combined.</p> <p>Critically, this proposal would join Berkhamsted with Bourne End in contravention to section 13 of the NFFP which stipulates two of the purposes of the Green Belt as being a) to check the unrestricted sprawl of large built-up areas; and b) to prevent neighbouring towns merging into one another (Footnote 57 https://www.gov.uk/government/publications/national-planning-policy-framework--2 : para 134, pg 40).</p> <p>This proposal should be rejected.</p>

QUESTION ANY OTHER COMMENT comment	I think the plan misses the real needs here. Heavy urban settings and inner =cities need redevelopment and investment. Villages and market towns need protection from development and sprawl. And the greenbelt is incredibly precious to all of lives and the environment around us. We must protect it - even if the Govt has relaxed its view of development that doesn't mean we should all throw common sense out of the window and build on it. When it's gone, it's gone forever. PLEASE PLEASE PLEASE stop the plan and reassess.

QUESTION ANY OTHER COMMENT comment	<p>I should have liked to have been given the opportunity for a simple and straightforward Yes / No vote to these proposals on a local level.</p> <p>This document is too long and very few people will not have their voice heard because of it.</p> <p>A flyer through the door showing clearly on a map what development is proposed and the opportunity to return a yes / no vote on the proposal would give everyone a chance to have their say.</p> <p>Planners and the council will steamroll development because it is just too hard for people to object.</p> <p>I think it is absolutely disgraceful that Dacorum Borough Council, having known since February 2020 that we were in the midst of a global pandemic has</p> <p>a) taken a decision to proceed with this process in the full knowledge that meaningful consultation was impossible.</p> <p>b) has opted to produce an overly complicated method to enable residents to pass comment. My mother is 95, intelligent and objects to the housing development proposals in Northchurch but by proceeding in this fashion you have removed her democratic right to object to what her elected representatives are proposing and thereby excluded her from decision making in her own neighbourhood. It is shameful</p> <p>c) You have conducted this process in conditions of quasi secrecy. I do not know anyone in Northchurch who received any notification of this process. This in itself should constitute grounds for this process to be halted</p> <p>d) My understanding is that no Traffic survey, no arhaeological survey and no Habitat survey has been carried out in Northchurch. Again my understanding is that these are requirements and without them the the process you are carrying out is therefore invalid.</p> <p>e) excluded those residents who either do not have access to appropriate technology or the ability to effectively use such technology</p> <p>f) has carried on with this plan regardless of the fact tha a neighbouring district, St Albans District Council in November 2020 abandoned itsLocal Plan, 2 of the reasons being</p> <p><i>These include the need to recognise the impact of climate change and the need to ensure any new developments will meet strong sustainability standards.</i></p> <p><i>We also have to bear in mind that the Government has proposed major changes to the planning system and that may alter the whole Local Plan system</i></p>

DBC however has refused to take a similar approach, particularly in light of the proposed government changes to the Planning system. Again this is shocking behaviour

Instead of working in the interests of residents, it shows complete disdain for them and instead panders to the interests of the developers who own the packets of land around Northchurch (not West Berkhamsted as it is referred to)

QUESTION ANY OTHER COMMENT comment	Please rethink this plan. It's excessive by the sheer quantity proposed and harmful to the environment on this scale and in the green belt locations earmarked for it. We have the opportunity to think more creatively about how we can build more houses in a genuinely sustainable way for the environment, and for those in need of affordable homes. This plan will have an irreversible and detrimental impact on the nature of Berkhamsted and Tring and the surrounding countryside. It should not go ahead.

QUESTION ANY OTHER COMMENT comment	<p>I received the brochure today - 25th Feb 2021, for the Dacorum Local Plan 2020-2038. I live on Darrs Lane, Northchurch, opposite a field where there is proposed development. The deadline for objections to the Dacorum Local Plan 2020-2038 is 28th Feb 2021. I find this almost fraudulent that a consultation can go on during a pandemic when we are dealing with shielding, lockdown, school closures and many other physical and mental health issue. I will be submitting an objection via email to Dacorum Planing, but find it hugely upsetting and deceitful that they are tryng to "sneak" this consultation through while we are distracted with a pandemic. In summary, for my full objection letter - we are a protected greenbelt, we are semi-rural and will no longer be if this development goes ahead, I live here for the access to fields, woodlands, flora and fauna in the countryside that I can bring my children up in and we are already struggling with the infrastructure. Darrs Lane is single track at points and full of pot holes which reaccur every winter. The small Tesco that serves Northchurch is already struggling with parking issues. Even if more amenites were provided, we still live in a valley and there are untold waste and run off issues. And lastly Dacorum have not addressed the speed limits on our roads around the school. A 9 year old girl was killed on Northchurch High street after being hit by a van 2.5 years ago. An asolute tradegy that we never want to see repeated, and adding to the strain on shops, schools and other ameneties we probably will.</p> <p>And above all Northchurch will cease to exist and no longer be here as a village. We don't want to be "West Berkhamsted" and indeed we are not. And we want to exist as a village which is why we live here.</p>

QUESTION ANY OTHER COMMENT comment	<p>85% of Dacorum is rural, 60% is Green Belt and 33% of the countryside is within the Chilterns AONB. Although the Local plans states that a key objective is "minimising and managing the requirement for development on Green Belt Land and the impact on the Chilterns AONB", it is clear that in their declared mission to provide at least 100% of their self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity will cause significant harm to our local Green belt. it also jeopardises plans, currently under early stages of discussion, to potentially extend the AONB or upgrade its status to that of a National Park.</p> <p>Nearly all development proposed in this plan will be on Green Belt land. The Minister of State Robert Jenrick said on 16 December 2020 on the recent consultation (Changes to the Planning Sytem August 2020) ... " we heard clearly through the consultation that the building of .. homes should not come at the expense of harming our precious green spaces. " on that same day the Government published a response to the recent white paper consultations and said (in reference to protected landscapes and Green Belt): "We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places."</p> <p>The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights , both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is probably going to be much higher than estimated. Please look at regeneration of previously developed land instead of proposing to build on Green Belt.</p>

QUESTION ANY OTHER COMMENT comment	Two key issues need to be addressed

1. The timing of the consultation in a pandemic when viewing plans and discussing views face to face is very limited is underhand. Combined with the lack of information - none through our doors in the Hall Park end of Berkhamsted - has severely limited the number of people I know, many elderly, who have not the technology skills or confidence to respond yet the plans will build on their doorstep! Please consider extending the consultation or redoing after you have solved issue 2.

2. The algorithm for the number of houses in Dacorum is based on a 2014 calculation and is no longer considered accurate (advised of this by Berkhamsted Citizens Association, and others who have emailed me directly). Please recalculate on the most up to date algorithm and without building on greenbelt land. Maybe if the required number of houses is less the plan will not need to look at greenbelt sites.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan requires substantial additional assessments to supplement the evidence available, including more detailed assessment of housing supply requirements, opportunities for delivery in established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It's clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have yet to be identified which justify development of the green belt land.

Taking into account the socioeconomic and physical infrastructure associated with Hemel Hempstead, it seems that Hemel Hempstead should take the vast majority of the housing needs. There is also greater opportunity for substantially increasing density provision of brownfield land to reduce the cumulative impacts on green belt land and reduce the environmental impacts on tightly constrained settlements located elsewhere in the borough.

If a satisfactory process to determine an objectively assessed housing need demonstrates there is a need for allocating green belt land for development, such a requirement should consider the varying characteristics of the landscape and

its contribution to the functionality of the green belt and AONB. Greater consideration should be given to the density opportunities associated with sites that can prove to be needed for allocation, especially with regards to the current assessment of opportunities available for Tr01 Dunsley Farm due to its substantially reduced impact on the green belt in comparison to the sites Tr02 and Tr03 east of Tring.

QUESTION ANY OTHER COMMENT comment

I don't approve of much of this local plan.

Far too much emphasis on greenbelt land. Not enough brownfield land has been identified for development.

The housing target is too high for the area and its associated population growth, amenities and roads and facilities.

The Northchurch East of Darrs Lane and LockField developments should not be built and are ill conceived because of poor roads and infrastructure to cope with the traffic, the amenities are not even enough for current residents/community.

Roads and parking is already maxed out.

Wildlife corridors and habitats have already suffered because of recent housing developments, will suffer yet again and species will die out.

Personally, Granville road is already congested and safety of residents is a real concern. Especially younger children walking to school.

Bell Lane has ancient hedgerows and is a sunken lane. It is not sensible, nor logical to propose this road as a link to the East of Darrs Lane housing development. Its extremely concerning that there is a proposal for a school, on this land. Why not extend current school sites and locations to accommodate reasonable housing numbers which is more sustainable for Northchurch and Berkhamsted. Ashlyns school has adequate grounds to be extended. Northchurch children can still then walk safely to Ashlyns / local school without congestion and pollution impeding them and their health.

Local heritage and AONB will be ruined and decimated if the East of Darrs lane development goes ahead.

Can you not consider the Majestic wine and land at the end of Northbridge road for this scale of housing,, where there is already infrastructure in place (road that can cope with the volume of traffic). Land at the back of Tesco and Fitness First car park (we already have a multi story car park). Loxely road garages could be reclaimed and used for starter homes/ flats. End of Chaucer Close garages could be used . Unused office spaces or above shops for social housing and empty retirement homes.

QUESTION ANY OTHER COMMENT comment

I am deeply disapointed in, and vehemently opposed to, the Local Plan, both as a whole and specifically the Housing Delivery proposal across the Borough and as it relates to Berkhamsted's Proposals and Sites.

The Introduction talks about "preparing a positive plan that is seeking to meet as much of our objectively assessed needs as we can. For housing, we are making a bold commitment to significantly increasing the supply of land to deliver 922 dwellings per year...". Given this is nearly three times as many houses as the Government's own estimtes are saying are needed, the plan is dong anything but meeting objectively assessed needs!

Further, the Vision, amongst other things, talks to "Promoting healthy and sustainable communities and a high quality of life", "To enable and support active lifestyles through the provision of open spaces..." and "to ensure that all development contributes appropriately to local and strategic infrastrcture." Has the plan been objectively assessed against its vision and objectives. It is clear to me that it has not as the proposals reduce the access to and availability of open space, severely and negatively effect the health and wellbeing of residents and will put under great pressure and already struggling infrastructure.

This plan must be rejected and urgently revised. Further, more must be done to raise awareness of the revised plan by Dacorum to allow residents time to respond. Few of the people I have spoken to are aware of the plan or consultation and while, as stated at the recent council meeting, you may have met your "legal obligation" of distributing leaflets to do so only weeks before closing a consultation and expecting residents to be able to digest a 400 page plan plus hundreds of detailed supplementary documents is frankly insulting and appears as though you are trying to approve this plan by stealth, and are not meeting your moral obligation to the communities that you server.

Please come up with a plan for the Borough not for Westminster.

QUESTION ANY OTHER COMMENT comment

Greenbelt

DBC Should be challenging the governments housing numbers. The Government has reiterated many times that Greenbelt will continue to be protected. Not least in

• *Paragraph 9 of the 2017 DCLG “Planning for the right homes in the right places: consultation proposals” which states that “Local planning authorities then need to determine whether there are any environmental designations or other physical or policy constraints which prevent them from meeting this housing need. These include, but are not limited to, Ancient Woodland, the Green Belt, Areas of Outstanding Natural Beauty and Sites of Special Scientific Interest. They also need to engage with other authorities – through the duty to co-operate – to determine how any need that cannot be accommodated will be redistributed over a wider area. This means that the level of housing set out in a plan may be lower or higher than the local housing need.*

• And in a response in December to the proposals in the consultation on Planning for the Future White paper, with reference to protected landscapes and Green Belt it “We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.”

meeting housing need is the only reason given for the proposed destruction of large areas of Greenbelt – clearly in the Government's eyes this does not meet the exceptional circumstances required by the NPPF to justify the release of large swathes of Greenbelt for development

• The same response also states that “*Within the current planning system the standard method does not present a ‘target’ in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt. It is for local authorities to determine precisely how many homes to plan for and where those homes most appropriately located. In doing this they should take into account their local circumstances and constraints.*”

DBC appears to have ignored this and simply accepted the Government’ figures as definitive.

Northchurch

It is unacceptable to write off the village of Northchurch - calling it West Berkhamsted throughout the plan. Northchurch a village in its own right, just like any other village in Dacorum, and with its own identity and Parish Council has been completely ignored as an entity and simply lumped in as West Berkhamsted.

No consideration as been given to the impact on the village of Northchurch on particular of the BK06 and BK07 sites, nor of the developments to the East of Tring. Indeed I believe there is hardly a mention of Northchurch in the plan and the Transport Study even managed to move St Mary’s school from Northchurch to Gossoms End. I would wish that this is addressed in the final plan and that Northchurch is given the same, and separate, consideration as the other villages in Dacorum.

TRING Developments

How can there be any justification, for proposing to increase the size of a small market town by 55%, simply to accommodate unsupportable numbers. No consideration has been given to the impact of the numbers on the character of the town, and nowhere has the impact on Northchurch High Street and Berkhamsted, of additional traffic from those sites, to use Berkhamsted’s facilities, been assessed.

Many from Tring already use Berkhamsted station (cheaper, more trains, more parking), Waitrose, and the town’s other facilities, and similarly many Berkhamsted residents drive to Tring particularly to visit the large Tesco. Again developments in Tring are too far from the town to be called sustainable, car journeys are required for most to access the facilities in either town.

There will be a substantial increase in traffic through Northchurch – a narrow high street with children crossing to get to school and elderly people from the Mandelyns site crossing to the local shop or bus stop. Standing on the small pedestrian island in the middle of the narrow High Street with lorries whizzing past either side is already a terrifying experience.

Northchurch is already an AQMA – children at the school are unable to use their main playground fronting the High street because pollution levels are too high.

Incomplete IDP

Although I understand it is not mandatory to supply an IDP as part of the local plan consultation, it's impossible to judge the proposals without it, so it is an essential document.

However the draft IDP is almost impossible to read with site tables which conflate Hectares and units (is it possible to have 0.38 of a public park?), and Developer Contributions which may or may not include funding from other sources -Education for instance where costs are shared with HCC – but does the figure quoted include the HCC cost or is it just the developer contribution as stated. There are no Developer costs in the IDP for the Transport Study proposals – though all sites are expected to contribute.

I understand that hectarage for green infrastructure on each site may not even be site related just a formulaic calculation of how much space should be provided, for the given population, shared out between the sites (Discussion Strategic Planning 22/2/2020). These figures are of great import to the public in assessing these sites.

Developer contributions in the Berkhamsted summary are shown at £31k per unit, but no transport costs are included and does that figure include HCC contribution to education.

I understand that the viability of the proposed developer contributions will be assessed and updated for Reg19. The details in the IDP and the proposals for each site are an integral part of the public's ability to understand and comment effectively on the plan. Including figures which are at best formulaic and may not even be attainable means we are wasting our time and energy commenting on a plan which appears to be an as yet uncostered aspiration.

The IDP was made available at the very last minute after the start of the consultation, and was clearly not ready for publication.

It is not a valid document for the consultation if it's incomplete and unspecific.

Parks

The only public park mentioned in Berkhamsted is on BK06. As Berkhamsted, although it has a number of green areas, has no public park in the true sense of the word – seating, pathways, flowerbeds, water features, trees etc, could I request that a true park is provided somewhere. The proposed 0.38ha for BK06 is very small to be categorised as a public park (but then this may not be the true hectarage). A proper park might indeed be classed as a SANG and address the issues of over use of Ashridge etc, simply providing another piece of grass will not.

Yes / No * Yes * No	Yes
QUESTION ANY OTHER COMMENT comment	<p>Thank you for consulting the Canal & River Trust on the Emerging Growth Strategy.</p> <p>The Trust has provided comments on individual policies and supporting text via the consultation portal however we wished to make a few more general comments too.</p> <p>We are pleased to note that the Grand Union Canal is recognised as a special feature playing an active part in the heritage of the borough and that the wider historic environment is valued and protected. The Trust promote the canal as being a form of strategic and local infrastructure performing multiple functions, including sustainable transport, open space and green infrastructure, flood risk, drainage and water supply. We believe the canal can transform places and enriches peoples' lives due to the role it plays in;</p> <ol style="list-style-type: none"> 1 improving the physical environment, opportunities for people and the wider economy. 2 contributing to supporting climate change, carbon reduction and environmental sustainability. 3 the public benefits including people's health and wellbeing that it can help generate. 4 supporting future development, regeneration and improvement. <p>Waterways can help deliver a range of policy topics or themes and it is important to consider waterways as a cross cutting theme or topic in plans. Waterways are multi-functional assets providing multiple social economic and environmental benefits. In addition to being a form of green and blue infrastructure, important for leisure, recreation and tourism uses, they can provide local and strategic sustainable transport routes. The Grand Union Canal and its various arms run through several local authority areas but most notably there needs to be cross boundary thinking between Dacorum and Buckinghamshire and Three Rivers.</p> <p>A supportive planning policy at local and neighbourhood level can assist in unlocking the potential contribution and value of waterways to economic, social and environmental wellbeing of regions, districts, communities and individuals; along with protecting these valuable assets for the benefit of current and future generations.</p> <p>It is therefore vitally important that planning policy recognises not only the multi-functional nature of waterways and the contribution they can make to wider economic, environmental and social objectives such as public health, renewable energy and sustainable development, strengthening resilience and creating conditions suitable for growth but their cross boundary nature so that proposals to develop on or alongside the canal are treated equally in the region to ensure that one area does not suffer from undue pressure for development as a result in variations in planning policy.</p> <p>The Grand Union Canal and its Arms has an important role to play in delivering aspirations for sub-regional and local accessibility by providing a safe and convenient cycle route that connect people to jobs, key services and recreation</p>

opportunities. Enhancing the capacity, safety and attractiveness of the towpath and connecting existing and proposed pedestrian routes, particularly to and within town centres, may support increases in walking for local trips.

The Trust is concerned that the towpath is not being adequately promoted as an active Travel Route throughout the plan, and although there is mention of the need to improve pedestrian and cycling routes in some allocations, it is not clear if this would include improvements to the canal towpath. In some cases this type of improvement is not listed within an individual allocation where it would be appropriate.

Developments can place additional liabilities and burdens onto the waterway infrastructure. Works to towpaths may be necessary to address the extra traffic resulting from new development, or safety upgrades may be needed to our reservoirs. If these opportunities are to be realised and the impacts mitigated planning policies and infrastructure delivery plans should address the funding of such works. Please contact the Trust as we are happy to discuss whether infrastructure works to our network would be most appropriately funded via s106 or Community Infrastructure Levy.

The Canal & River Trust is pleased to note that the Council have created a policy relating to the Grand Union Canal but note that there is a separate policy relating to residential moorings despite the findings of the Evidence paper and we query the necessity and justification for this. We would welcome the opportunity to work with the council to ensure that the two canal related policies are fit for purpose and there are some elements of these policies and supporting text which raises matters of concern. We would welcome the opportunity to meet with the council to discuss this further before the next stage of the plan in order to prevent the need for an objection at a later date.

Whilst a new mooring development, whether for leisure or residential purposes may well satisfy various land-use planning considerations and be appropriate in many respects, in order to be delivered, it would also have to successfully pass through the Canal & River Trusts own application process and obtain the necessary connection agreement which would permit it to physically connect to the Trust's waterway network. The acceptability or otherwise of a marina or other offline mooring proposal to the Trust is based primarily on consideration of availability of water resources and navigational safety.

It may be useful to add additional wording to the Explanation to this Policy advising applicants to undertake pre-application discussions with the Canal & River Trust in respect of any future marina proposals to enable them to be able to demonstrate that the canal network is capable of accommodating the proposal.

We ask for greater recognition that Green infrastructure includes blue infrastructure. This is not mentioned in the main text (just a footnote) and the GI definition in the glossary does not make this clear and refer to greenspace, yet no definition is provided of greenspace. We note that the definition of open space includes waterways, thank you.

There is little mention or recognition of the Tring reservoirs as an ecological or recreational resource and although the plan mentions a desire to increase the recreational use of the canal by encouraging water related activity this does not seem to be reflected in any policy or allocation.

Finally, The Trust will continue to work with the council to protect the heritage, environmental and recreational value of the canal and safeguarding it against inappropriate development supporting its ability to deliver economic, social and environmental benefits to local communities and the nation as a whole and secure the long-term sustainability of the

canal and its arms, their corridors and adjoining communities. Please note however that Canal & River Trust is written with an ampersand not the word 'and'.

QUESTION ANY OTHER COMMENT comment

Environmental Management

Our footpaths and bridleways have come under increased pressure with many more using them for their daily exercise. During the very wet winter months we now experience many of these have become nearly impassable with deep mud & water. Farmers have commented on damage to their crops as people widen the paths to avoid the mud.

This gives some indication of the sort of pressures the Chiltern countryside & particularly the popular areas of outstanding natural beauty such as Ashridge & Ivinghoe Beacon will experience with the proposed increase in population of some 50% on the Green Belt at Tring, immediately adjoining the AONB. For example in the past bluebells have been nearly entirely eradicated from Burnham Beeches, where once abundant & other flowers once common such as orchids have in many places vanished.

With regard to hedges: some years back there was talk that these should only be cut every three years or so, allowing regeneration & providing vital winter berries for birds & mammals. Unfortunately it now seems universal for these to be savagely cut with tractor flails every year, leaving literally no food or shelter for wildlife. Perhaps there could be a drive to reverse this practice. If hedges have to be cut regularly to provide roadside visibility, the field sides & tops can be left for much longer.

Full Name	The Box Moor Trust The Box Moor Trust
Organisation Details	
Agent ID	
Agent Full Name	
Agent Organisation	
Yes / No * Yes * No	Yes
QUESTION ANY OTHER COMMENT comment	<p>The Box Moor Trust is a charity which originated in 1594. Initially it was just a manager of agricultural land, but now the large estate, comprising woodland, grassland and water meadows, also provides exercise, leisure, sporting and learning opportunities for its many thousands of beneficiaries in Hemel Hempstead, Bovingdon and Flaunden.</p> <p>The Bulbourne and Gade river valleys lie at the heart of the estate and as examples of globally rare chalk streams, are key features in the great variety of ecosystems which Box Moor Trust land offers. Successive Local Plans and Core Strategies have correctly identified these catchments as over-abstracted, but the rivers continue to suffer from low flows and ecological stress.</p> <p>The Trust is therefore pleased to see and supports policy DM33, which seeks to protect and enhance river character and the water environment. Objective DM 33 c is particularly important in highlighting the need to avoid abstracting water from the ground. However, the Trust is concerned that policy DM 33 does not appear to be supported by a clear vision (nor a timeline) as to how the policy will be achieved, particularly since urban development, identified in other policies, will put further stress on these rivers.</p> <p>The Trust is keen to support wildlife corridors and the enhancement of green spaces and biodiversity. Much of the Trust's land does in fact form corridors, particularly along the Bulbourne towards Berkhamsted and in the direction of Bovingdon. It would not wish these corridors to become isolated. In relation to this, the Trust broadly supports policies DM 28, DM 29 and DM 30. It hopes that these policies would be applied rigorously and that a system for measuring and recording biodiversity net gain should be put in place. Where development is necessary, the Trust would support the strong compliance of policy DM 224a, c, d, and f, by way of mitigation. DM 37 is also supported, but the Trust would like to see a strengthening of DM 37 1a, in relation to ecological connectivity.</p>

The reduction of pollution into or around the Box Moor Trust Estate is an ongoing concern and the Trust therefore notes and supports policy **DM 35**, particularly **DM35 c**, concerning water quality.

Policy **SP 11** identifies development at Bovingdon Brickworks Growth Area. Such a development would be adjacent to Box Moor Trust land at part of the old brickworks, and now a Local Wildlife Site. The Trust would not wish to see any detrimental impacts to the Wildlife Site caused by development; rather that the Trust could work with developers to ensure they improve their site through off-setting and biodiversity net gain.

The Box Moor Trust hopes that policies, in the new plan, will be properly implemented, so as to protect and enhance the green spaces of not only its own estate but those throughout Dacorum.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate

provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

The consultation on the Local Plan has not been publicised sufficiently, especially to the most affected residents (those who live close to proposed sites), who did not receive the Council leaflet here in Northchurch, and many of whom are still unaware of the consultation as it ends. Sending a leaflet to every household would have been the best way to get in touch with residents and make them aware, especially during a pandemic.

People without good access to the internet and without a computer have been disadvantaged and excluded from this consultation as libraries are closed (to view the consultation) and to respond (responses seem to require web access/email). To be inclusive, it ought to be possible for residents to write a letter with their objections, which a Council officer then allocates to the correct section of the Plan. Requiring people to respond on this portal by feeding back in a very prescribed way excludes many people from the consultation and is onerous and therefore discourages public engagement.

There have been technical difficulties which discourage engagement. My husband has asked for a new password for the portal four times and is still waiting for it to be sent. He will be emailing his comments instead.

I would like to reiterate that Northchurch is a village (we have a parish council) and we are not part of Berkhamsted as stated in this Plan. On that point of having to navigate the portal, I do not have the time to read your entire evidence base to find the bit that states this wrongly, so I am including this here. I have previously stated that Table 1 in Section 6 does not include Northchurch under 'villages', which is an omission.

Similarly, to state again, the numbers from Central Government this consultation is based on are wrong. I do not have time to find the relevant bit in your evidence base to prove this point, which was made by your ruling party Tory councillors in the full council meeting on 25 February 2021. The point has also been made by LibDem councillors and solicitors who have looked into this so I am confident to base my objection on it.

I have just learned that the Council will treat the pre-printed feedback form from Thakeham developers, which people just need to sign and date and send back, with equal weight as the responses received in the portal. It took me several hours to make my objections while it would have taken me 2 minutes to send an approval. Therefore I believe this process is unfair as it encourages positive responses and discourages negative ones.

Lastly, I question whether during a pandemic and through lockdown was the best time to hold this consultation. Many people are busy at work, home-schooling, ill with Covid, have lost loved ones, are not coping and shouldn't have been expected to deal with such an important consultation on top of all that.

The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).</p>

QUESTION ANY OTHER COMMENT comment	<p>Impact of recent changes</p> <p>Timing makes it a challenge but the DLP needs to be revised to take into account the impact of Covid and societal adaption in terms of high street retail, increased internet shopping, change of working practices impacting commuting and increased broadband demand from local and home working. There is likely be an increase in sites that previously were for commercial use becoming available for residential. A permanent increase in working from home is also likely to have a marked impact on the required supporting services. These changes also need to be reflected on in plans for collaboration with the surrounding boroughs and districts, such as St Albans.</p> <p>Misleading information</p> <p>We also note that several areas in Berkhamsted that are shown as "Open Land" are in fact school properties or allotments and are either not open to the public for access, or only very limited access, this is very different to a park.</p>

QUESTION ANY OTHER COMMENT comment	I am opposed to the Bulbourne Cross proposed development by Thakeham, between Berkhamsted and Bourne End. Because of the impracticability of providing adequate supporting infrastructure without unacceptably increasing the environmental damage, traffic congestion, air pollution, and risk of worsening road safety, and the burden on already overstretched roads, parking, schools, health services, sewers, surface drainage, water and other utilities. I am also

opposed to the development of any green belt land until all other available sites have been fully utilised. Green belt development should only then be allowed to meet the need for social housing for people who are completely unable to afford to either rent or buy here currently. I do not agree that green belt should be used at all to allow developers to generate excessive profit.

The proposal fails the criteria for a sustainable development on the grounds that it would:

- permanently remove from production valuable arable land
- therefore reduce the availability of locally sourced food
- increase carbon emissions, despite the claims made by Thakeham that buildings would be constructed using carbon neutral materials, and that energy needs would be provided using green power sources, other elements such as roads and pathways would not be carbon neutral, and the development as a whole would result in a net overall increase in carbon emissions during use, because of the lack of sustainable zero carbon transport provision
- increase car use, as the proposed additional public transport (even if it were actually provided) would be inadequate to meet the transport needs of residents living so far from the town centre amenities
- have a severe impact on local wildlife diversity, particularly on species which are already suffering dramatic declines - the fields included in the proposal currently provide nest sites for red listed skylarks and the adjoining hedgerows for red listed yellowhammers as well as numerous other bird and small mammal species; see

birds-of-conservation-concern-4-leaflet.pdf (bto.org)

<http://www.rspb.org.uk/ourwork/conservation/biodiversity/keyspecies/birds/skylark.aspx>

In addition, if allowed, the proposed development would create a precedent meaning that further development on Green Belt land adjacent to the A41 Berkhamsted bypass could not in future be effectively resisted.

QUESTION ANY OTHER COMMENT comment	<p>My family and I moved to Dacorum in 2018 to settle in Berkhamsted for at least the next 25 years. Over this time, we look forward to developing ever stronger links throughout the community and watching our young children grow to adulthood. As such, we have a vested interest in seeing the Borough grow in a way that works for all its citizens – both existing and new.</p> <p>Against this backdrop, I wish to formally state my strong objections to the ‘Dacorum Local Plan (2020-2038) Emerging Strategy for Growth’. The evidence suggests that, if this plan is approved, your personal legacy will be of considerably worsening towns and communities within the Borough. For new residents moving to the area and for those already here. For all ages. And for all financial situations. I suspect you don’t want to be remembered after you leave this office as the person who caused such damage to an area. So, I ask you to fundamentally rethink.</p> <p>Due to the COVID-19 constraints on travel and mingling for the past year, my experience, and hence prime objection, focuses on the portions of the Local Plan relating to developments in the Berkhamsted area.</p> <p>To summarise:</p> <ol style="list-style-type: none"> 1. Flawed modelling of number and type of housing required would fail to meet the actual needs of the voters moving into the area, whilst disrupting those already here far more than is needed. 2. Inadequate commitment to transport infrastructure needs to accommodate the changes proposed would result in a legacy of decades of traffic congestion for voters in Dacorum and visitors to the area.

3. Insufficient provision of water supply, wastewater disposal and other infrastructure would leave households with shortages and damage the local water table, with knock-on considerations around subsidence and environmental impact.
4. Unworkable assumptions around public transport and foot / bike journeys would see considerable increase to carbon emissions in the Borough and considerable travel delays around vital transport hotspots (town centres, schools, rail stations, etc.).
5. The above worsening of conditions for the new and existing voters in the area also comes with an ecological cost due to the loss of green belt. If green belt is to be repurposed, it must be done in a way that makes the greatest positive impact for the current and future residents of Berkhamsted. This plan wastes that sacrifice.

These are fundamental flaws in the strategy underpinning the 'Dacorum Local Plan (2020-2038) Emerging Strategy for Growth'. As such, this plan should be rejected outright, and a new plan drawn up that addresses the actual needs of the area for today and the long-term success of the Borough.

These points are expanded below.

Incorrect Assumptions for Housing Provision

Whilst accepting that there is an undeniable need for more housing, in particular for more genuinely affordable housing, the scale of proposed development in Dacorum is out of balance with the long-term needs.

The Local Plan does not take account of National Planning Policy Framework (NPPF), paragraph 11, footnote 6, which allows local authorities to restrict the scale of development due to other planning constraints including impacts on the Green Belt and Area of Outstanding Natural Beauty (AONB).

Recent Government guidance on calculating housing need has been, at best, confusing. The algorithm for calculating housing need that has been used by the Council is a flawed means to calculate the housing needs of the Borough, based on old data.

The correct calculation of the housing needs in Dacorum should be based on the most recent and relevant data, which is currently the 2018 based Office for National Statistics (ONS) projections. Instead, the Local Plan is based on calculations using outdated 2014 based ONS data, which results in a significant overestimate of housing needs.

I note that on 16 December 2020 the UK Government published its response to the local housing need proposals on the consultation on changes to the current planning system. This sets out important changes to the standard method which has been amended so that the 20 most populated cities and urban centres in England (none of which are in Dacorum) see their need uplifted by 35%. The Government also said:

"More broadly, we heard suggestions in the consultation that in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We (Government) should be clear that meeting housing need is never a reason to cause unacceptable harm to such places. ...

Within the current planning system the standard method does not present a 'target' in plan-making, but instead provides a starting point for determining the level of need for the area, and it is only after consideration of this, alongside what constraints areas face, such as the Green Belt, and the land that is actually available for development, that the decision on how many homes should be planned for is made. It does not override other planning policies, including the protections set out in Paragraph 11b of the NPPF or our strong protections for the Green Belt."

Failure to Provide Adequate Supportive Infrastructure

Looking at the proposed developments on Green Belt land, there is insufficient consideration in the Local Plan for the provision of new infrastructure or upgrading the current infrastructure to support the scale of the proposed developments.

Taking a specific example of transportation, consider area 'Bk01 - South of Berkhamsted'. This proposes adding 850 residential units with 2 ways out of the development:

1. Emerging immediately next to a secondary school of over 1300 pupils; and
2. Passing two primary schools on a single, narrow residential road with a 10% gradient and car parking on both sides.

These roads are heavily congested during normal times with the current population – the road by the secondary school backing up during school run times to the main A41 route into and out of the town. Adding 850 households of cars will lead to transport paralysis for the new residents, the homes already in the area, pupils of the schools and people trying to access Berkhamsted from the A41 during peak times.

Similarly, increasing the number of dwelling by over 1,800 in the Berkhamsted area will result in a considerable increase in vehicular traffic through the centre of the town – a route that is already heavily congested at peak times at the A4251 / A416 junction and along the High Street. This is due to the historic layout of the town along a valley with steep sides meaning there are only these two roads into and through the town.

For the increase in population proposed in the Local Plan, there would need to be a considerable extra investment in road widening, traffic flow control measures and new roads to bypass the congestion points inherent with a medieval market town situated in a steep river valley.

Impact on Green Belt and Other Designated Land

The Local Plan states that a key objective is “minimising and managing the requirement for development on Green Belt land and the impact on the Chilterns AONB”. This strategic principle is then violated by the declared mission to provide at least 100% of the Council’s self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity.

Noting that 85% of Dacorum is rural, 60% is Green Belt, and 33% of the countryside is within the Chilterns AONB, this approach comes at considerable environmental cost.

As such, the Local Plan must be fundamentally reworked to avoid such contradictions in strategic goals and principles.

You are now faced with a personal choice.

Whether to be remembered for taking the easy choice and sticking to an inherently flawed plan that will deeply damage the Borough of Dacorum forever – your lasting legacy – or to take the brave decision and do what is right – to reject the current plan and come back with one based on the actual needs of the current and future voters and households of Dacorum.

QUESTION ANY OTHER COMMENT comment	<p>The Local Plan is a comprehensive document that sets out a determined drive to 'sell off the family silver' at all costs. I am saddened that the Council chooses to lend its weight to accelerating loss of Green Belt land rather than preserving it and I caution such an approach when government targets are not being met to preserve hedgerows, retain the best agricultural land and preserve the Green Belt. A day of accountability for all thing environmental will come and this attitude will find the Council lacking in due course if the Local Plan is not amended to reduce housing provision with a more appropriate dataset for calculating need.</p> <p>There is always a balance to be struck between setting out sufficient information for the public to understand the issues and setting it out in a way that discourages people from commenting. The balance was not right here with the consultation method too cumbersome and timescale too short. I personally have spent more than 25 days reading, researching and writing to provide a considered comment and really needed much, much longer.</p> <p>By the time I found out about this consultation, which was following information recieved from a neighbour and not a direct communication from the Council, even so, there was insufficient time left for me to read the vast array of supporting documents. Holding the consultation during a lockdown, when parents have to teach their children at home, over Christmas and at the time when many people are struggling to prepare their tax returns is unacceptable. It prevents discussions being held, workshops being attended, research from undertaken and sites being visited. It ultimately reduces transparency in local government and discourages public engagement.</p> <p>Therefore I do not give permission for the Council to count my lack of comment on these supporting documents as approval unless specifically indicated in the comments I have made in my Local Plan consultation response. I request that the consultation deadline is significantly extended to allow full consideration of a revised Local Plan based on reduced estimates of need.</p>

QUESTION ANY OTHER COMMENT comment	1) A Dacorum Local Plan is important to achieve a Community with good employment, housing, leisure in pursuit of Dacorum is great place to Live, Work and play

2)BUT the plan must be based on fact. There is no evidence to show the need for 16,516 new dwellings in DBC or 2730 in Tring
3)NEXT STEP Withdraw pland and start again based on fact such as census 2021 not just an abandones set of figures imposed by Central Government who have long ago abandoned any use of the outdated planning forecasts

QUESTION ANY OTHER COMMENT comment	Perhaps, with the likelihood of a number of additional bright and innovative people coming on the labour market as a result of losing their jobs in the Covid pandemic. there might be the opportunity for local government to recruit additional new blood. This new influx could help the existing planning authorities better to adjust to a changed world where greater joined-up thinking is required to enable local authorities to reach optimum solutions for the housing needs in their community. One thing is certain, the general public are now, having endured significant lockdown constraints, no longer likely to be willing to accept what is offered by planning authorities without their input. The advent of crowd-funding to

finance local opposition to poor planning decisions , combined with immediate and enhanced social media communications, will see to that.

QUESTION ANY OTHER COMMENT comment The timing of this consultation during a worldwide pandemic and national lockdown has disenfranchised the public. In particular, not allowing full access to the many people who do not have internet access. The DLP document is too large to access and navigate on mobile devices, which is what the majority of the public will be using to view.

The only other available option is to make an appointment to visit the library to see the documents. However, our government has told the public to 'Stay at Home to Save Lives'. Few will choose to risk their lives by booking in to view the DLP at the library.

QUESTION ANY OTHER COMMENT comment	I am honestly horrified by these plans and how they would completely change the size and nature of all the towns in Dacorum. Easy access to countryside for residents will be lost by this plan building on greenfield sites. The quantity of dwellings planned is completely unrealistic in proportion to the current size of Dacorum towns. The pandemic has changed forever the where people live and work. This plan is now redundant in that light.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship

with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment Overall the strategy needs a rethink in terms of both local traffic, congestion and road safety and doing anything to avoid the unsustainable consumption of green belt land. The larger issue of local pollution and health and safety of market town residents in berkhamsted and tring should be a priority. On an even larger scale is the UK's aspirations for netzero, I believe the current plan falls well short of this as instead of mor sustainable redevelopment of brownfield sites new virgin greenfield will be destroyed.

QUESTION ANY OTHER COMMENT comment	This plan has been introduced during COVID-19 when there have been hugely reduced opportunities to consult and raise awareness of the plans locally. There has not been adequate local publicity of the plans or consultation because of this and the consultation period therefore needs to be extended for a few months after the end of lockdown in order for all local residents to input their views effectively.

The Economy has changed dramatically since the Pandemic and this should be reflected in a reassessment of the Plan to develop Green Belt land.

QUESTION ANY OTHER COMMENT comment	<p>The Dacorum Plan is not currently fit for purpose. It is environemtnally damaging, not sustainable, and will detrimentally affect the lifestyles of many current Dacorum residents, including my own.</p> <p>This plan suggests the wrong place to buid homes - Green Belt with high biodiversity and high amenity value (such as that proposed for the South Berkhamsted Development) should not be destroyed in order to creaste profits for developers. Brown field sites should be used effectively to give local residents and their offspring the houses they need.</p>

The plan suggests the wrong type of housing development. We should not be encouraging large-scale sprawling estates of semi detached and detached houses outside our town limits. Instead, we should be utilising our brownfield sites to their maximum potential to provide starter homes and green urban living close to the bustling town centres. We should be limiting growth in housing to the available urban areas.

The plan suggests huge growth of housing for Dacorum at the wrong time. We have just left Europe (with some surveys suggesting over 1 million EU citizens have left the UK), we are coming out of a global pandemic (with resulting economic issues and working from home approaches), and we are entering a period of "levelling up" with areas to the North of the country. Put simply, this is the wrong time to be building excessively in already densely populated SE England.

In the case of South Berkhamsted development in particular, we will lose Green belt land with high biodiversity and amenity, destroying the habitats of ground nesting birds, felling ancient oaks and killing off the few remaining orchids in the area. And the result? Less access to the Green Belt for Berkhamsted residents, busier roads for our children to walk on, more sewage problems spewing out onto our gardens, and dirtier air for us to breathe. This is not the Cleaner, Greener, Safer Dacorum that I want to live in.

QUESTION ANY OTHER COMMENT comment

The target for the number of houses is incorrectly calculated and should be challenged, with the number revised significantly lower than the target. The number should reflect the actual need for housing particularly in the light of recent changes in population and society, as well as changes in commercial and retail demand.

I feel strongly that a higher proportion of the houses should be built on brownfield land, or through conversions, in existing urban areas and away from areas located in the green belt and close to the Chilterns AONB.

Lastly, this plan fails to recognise or take into consideration the climate emergency - despite the fine words expressed by Dacorum BC - and focuses entirely on housing needs to the detriment of the environment, wildlife and biodiversity, as well as the health and wellbeing of the residents. The plan will have an enormous impact on our area, particularly Berkhamsted and Northchurch - and our children and grandchildren will never forgive us if we get it wrong. I would hate them to one day say: "This used to be a such a beautiful part of the Chilterns" as they gaze out on a congested and polluted urban sprawl.

QUESTION ANY OTHER COMMENT comment I am an educated and computer literate adult but I found it incredibly time consuming and difficult to find how to comment on these proposals. It was not possible to complete comments on a mobile phone. I also think it is very disappointing that the time frame for comment is whilst we are all still very much in lockdown , which means that many people will be unable to comment. I also think that by having an online consultation you are effectively limiting the number of people who can comment on it - elderly people or those without devises would find it extremely difficult.

QUESTION ANY OTHER COMMENT comment	I do not see any real evidence for this level of growth in Dacorum. The only thing I see in my day to day living in Dacorum is a need for secure, low cost housing. More 'affordable' privately developed housing is not what is needed. Some people simply cannot afford 'affordable' housing. People also need security, which is not provided by the private rented system, a system which means families are turfed out of their homes at the whims of the landlord. This does not build sustainable, happy, safe communities. Quite the opposite. Please priorities the needs of those people in Dacorum who are struggling at the bottom, not those who are already very wealthy from building 'affordable' (not very) housing.

QUESTION ANY OTHER COMMENT comment	<p>The strategy is outdated and ill thought out impacting communities in the borough with further congestions, lack or creaking services, over priced facilities and has little regard for the climate and biodiversity.</p> <p>This coupled with the poor consultation questions the validity to the benefit of communities in the borough at large. Although there are question marks to the proposal itself the vision laid out by Thakeham for Bulbourne Cross has more merit and consideration for transport links, Green Space and its impact on communities along with the significant changes to our country with Brexit and COVID the strategy is outdated and ill thought out and will be a further increased legacy of deforestation and negative impact to our climate at large.</p>

QUESTION ANY OTHER COMMENT comment	The consultation has been wholly inadequate with very few of those affected properly consulted or made aware that a consultation was occurring, largely because of the pandemic, one suspects. No house in our road (Greenway) received the local plan until this week; I received it on 25Feb21 after requesting a copy, just four days before the consultation is due to close. With in-person meetings and social events currently suspended, the usual discussions and information dissemination routes are greatly diminished and community awareness of the consultation is very low.

QUESTION ANY OTHER COMMENT comment	<p>I am incredibly disappointed that this consultation has continued despite the multiple objections delivered at the meeting of Wednesday 24th February.</p> <p>The point of consulting is to gauge a true picture of the views and suggestions of the public. You have excluded those who do not use technology (e.g. my 70 year old neighbour does not have a computer and so didn't know how to feedback her views - she is against the plans). We are in the midst of a pandemic, meaning a lot of people are extremely stretched and have little time to dedicate to reading through these documents (it has taken me 2 days and I still haven't read everything.)</p> <p>You need to rethink and consult again when people can see the plans and speak about it.</p> <p>In the mean time, please lobby the government to reconsider these inane requirements for providing housing for future years. Shouldn't the government be educating people and making us all reflect on the worlds finite resources? This shows very little social responsibility.</p> <p>I also want to say I find the level of information overwhelming. Shouldn't this have been broken down into easier sections? This is not a user friendly or positive experience.</p> <p>I really hope you will reconsider the plans and make a considered effort to make real environmental change.</p>

QUESTION ANY OTHER COMMENT comment	There has been inadequate public consultation. There has been a flurry of activity in my village of Northchurch in just the past week as people have only just been made aware of this important and life-changing consultation. Most of us only had the brochures delivered to us in the past week after our Counsellor, Lara Pringle, raised the issue. The plans are deeply unpopular with everyone I've spoken to. The plans would: <ul style="list-style-type: none"> • obliterate our village from existence

- damage our local environment
- increase congestion
- increase our local population by up to 50%
- destroy 40 Acres of Green Belt land
- have a devastating impact on our mental health and well-being

I whole-heartedly object to the proposals for Nothchurch and Berkhmasted.

QUESTION ANY OTHER COMMENT comment	<p>I strongly suspect that many of Dacorum's residents are unaware of this Local Plan and your consultation on it. I therefore think that in the interests of democracy it is essential that you do more to publicize your proposals and allow people more time to give you their feedback.</p> <p>I also think that it's unacceptable that you have made it so hard for people to respond to your consultation on this online portal or the downloadable comments form by requiring people to read vast amounts of text before they can answer your questions. It's like being asked to read a whole textbook. It has taken me over 17 hours to complete my response (and I still haven't read every section of the Plan). Most people wouldn't have sufficient time to spare. The consultation has been designed in a way that is likely to put people off responding. I strongly suggest that in order to support democracy you make it viable for everyone to respond to your consultation by allowing people to email/post you their thoughts on your Virtual Exhibition or the equivalent paper summary of your proposals, whilst making clear where people can read the actual text of the Plan if they wish to do so. I request you to note that my opposition to the proposed developments in North Hemel is shared by the other 3 members of my household (who have not managed to submit a response to your consultation).</p> <p>I am also not impressed that this consultation has not been designed to be accessible for all members of the public. It demands that people read the text of the Plan, which uses language that is not designed to be easily understood by everyone. The Virtual Exhibition and its paper equivalent could also have used simpler, clearer English and it would also have been helpful for all potential respondents if they had contained larger, clearer maps of the proposed areas of development with clear marking of features that people might recognise eg road names, farms, hamlets. If you would like to make a democratic and non-discriminatory attempt to consult all of Dacorum's residents, perhaps you could take this feedback on board and produce a new and better Virtual Exhibition to help the public understand your proposals more easily.</p>

QUESTION ANY OTHER COMMENT comment	<p>The plan has high ideals but no practical safeguards to ensure the ideals are not watered down in practise. It provides for much higher levels of new housing than are necessary or desirable and fails to protect the natural environment. All other considerations are subservient to the perceived (not real) need for new houses. Insufficient thought has been given to the means by which environmental concerns will be met, eg wildlife corridors, rewilding, tree planting, sourcing of water and disposal of sewage, net zero emissions from the building and running of the new homes.</p> <p>Any development must be accompanied by areas of accessible mixed woodland and rewilding areas to compensate for the destruction of the Green Belt.</p>

QUESTION ANY OTHER COMMENT comment	<p>I live in Berkhamsted and find the plans to develop the town unrealistic and poorly thought out. If you take the Town Centre Junctions and congestion; with only one crossing in the town centre, HCC transport studies are clear there is no scope for new roads or widening in central Berkhamsted. The traffic lights perform at 'over capacity' at busy periods.</p> <p>Water and Sewage capacity; with the need to maintain the unique chalk streams in the area, the Environment Agency has capped abstraction from the local aquifer at current levels. The Sustainable Assessment identifies the need for additional capacity for the Borough as early as 2031.</p> <p>Medical and Social Care; the Plan makes no provision for additional local GP services, nor for Social or Dementia Care in Berkhamsted. We recognize that these services are not the remit of the Planning Authority but adequate and sound Public Health provision must not fall between the cracks of HCC/CCG/PHE.</p> <p>Schools: we note the potential provision of new Primary Schools, while a new 6FE Secondary School is posited on Site BK 06 in Northchurch. Capital Funding to build the school is unlikely to be sourced from a single development: additional revenue funding will be needed until its roll can attract funding to be sustainable. This must be identified in the IDP.</p> <p>Infrastructure Development Plan:</p>

QUESTION ANY OTHER COMMENT comment	<p>There has been inadequate opportunity for public consultation amidst a global pandemic.</p> <p>There has been a flurry of activity in my village of Northchurch in just the past week as people have only just been made aware of this important and life-changing consultation. Most of us only had the brochures delivered to us in the past week after our Counsellor, Lara Pringle, raised the issue.</p> <p>The plans are deeply unpopular with everyone I've spoken to.</p> <p>The plans would:</p> <ul style="list-style-type: none"> • obliterate our historical village from existence • damage our globally unique local environment • increase congestion both vehicular and foot on already insufficient infrastructure (narrow roads, narrow paths, tow paths) • increase our local population by up to 50% which is not organic and will harm and pressurise, if not destroy, community relationships • destroy 40 Acres of Green Belt land • have a devastating impact on our mental health and well-being

In summary, I strongly object to the proposals for Northchurch and Berkhamsted. We chose to live in Northchurch from Berkhamsted High Street for its village character, accessibility to larger amenities in Berkhamsted, stunning surrounding countryside which we can see from our house and garden, and the opportunity to be part of community. Something that the pandemic has shown, is vital to all ages and groups. We have for the first time in our lives, invested in our local community for the benefit of our village and our family. We support the school, church and our neighbours. These ambitious and unconsidered development plans jeopardise and destroy, the lives our community has worked hard for.

What will our legacy be if we destroy all this, taking away history, ecosystems, wildlife, community for the sake of national and local Government targets? Globally, we are not doing a great job of addressing and rectifying such issues. This is an opportunity for more than an individual, but a community, a town, a settlement, to lead by example and do the right thing and protect all our futures, in the right way.

QUESTION ANY OTHER COMMENT comment

I do not agree with these plans. Our community needs work from the inside out, expansion will not aid this. We need clean streets, we need to make run-down buildings safer which in turn will provide more housing, we need to use the spaces we have more efficiently like our high streets and shopping centres. Doing this will in turn positively impact the community creating healthier spaces and more employment due to better high streets and shopping centres.

More thought needs to be taken into how we protect the biodiversity and ecosystems within our beautiful surrounding environment. If we do not do this we will lose it completely, it is not about how it looks it is about the nature and wildlife!!

QUESTION ANY OTHER COMMENT comment

Having received the very helpful and clear pamphlet about the new Local Plan, this gave me a good overview of the vision and intention of what the Plan proposes. As comments were invited, I thought I would contribute with some general comments of my own on the discussion website.

However, what I found on line was a very extensive and complex document which seems to cover every nuance and detail of the Plan. I guess the council have a legal duty to fully cover all of the topics that need comments but the complexity and detail of this has instantly stopped 99.9% of the community making any attempt add their views.

I congratulate residents who have waded through the document and the comments I have seen are valid and very good.

As a life long resident of Hemel Hempstead, I understand the need for enlarging the town and giving people the opportunity have their own houses etc. However, I see that unless the town infrastructure is improved significantly ie reinstatement of Hemel Hospital, more schools, local shopping/community facilities, improved roads, better public transport, extensive investment in the town centre to make it a community focal point etc then the risk is Hemel Hempstead will simply collapse and completely lose its unique identity as a "New Town".

The Hemel New Town areas (Highfield, Gadebridge, Chaulden etc) have always been open and distinct areas with easy access to countryside and parks and still retain something of the local community feeling. Will provision be made available for the proposed new residential areas to have the same open spaces, country access and the opportunity to become communities in their own right?

Also, if Greenbelt land is to be sacrificed to achieve this expansion and most of it is in and around the industrial area and outlying areas, what provision is being made to encourage manufacturing companies (small and large) to the town to create employment for the residential growth? Hemel thrived in 50s, 60, 70s when it was a manufacturing town with employment for all who wanted it. With the expansion of the town and no provision for work, there will a huge risk that all of the new areas will simply become dormitory areas where people simply live and new comers have no affinity for the town.

I doubt anything I have said has not been said before and are maybe the ramblings of a lifetime Hemel resident who is concerned about the town's future. However, I trust that all of the above comments will be reviewed and taken into account and not ignored as they do not follow the comment format the Plan document uses.

QUESTION ANY OTHER COMMENT comment	<p>I will include all my comments in this section rather than jumping around all the other areas of this website.</p> <p>It is my understanding that we live in a democracy, not a dictatorship. However one could be forgiven that the present administration at Dacorum Borough Council (DBC) is acting exactly in the manner of a dictatorial regime in the manner in which it has undertaken this whole process.</p> <ul style="list-style-type: none"> The first and most obvious question is why in the midst of a global pandemic (First lockdown commenced on 23rd March 2020) DBC decided that it was appropriate to carry out a consultation process on a plan which proposed that plans be approved across the Borough for 16,899 new dwellings, a huge figure. <p>The British Prime Minister has described the Covid 19 Pandemic as “the worst crisis to hit this country since the Second World War”. Yet DBC considers that it is proper and sensible to carry on with this process while we face this crisis.</p> <p>In addition to this no account appears to have be taken of the change of the view of the Government in the way in which the planning process nationally will take place in future.</p> <p>In November 2020, the Conservative MP Robert Jenrick, Secretary of State for Housing, Communities and Local Government announced that future planning would be altered so that more weight would be given to building away from the South East corner of the UK in line with the “levelling up” policy of the Government. It would appear prudent for any sensible local authority, mindful of not incurring unnecessary expense, at that point to have suspended the Local Plan process whilst awaiting clarity from the government on what would be required in terms of development in the future as it is apparent that the target set by the government will quite clearly no longer be 16,596 dwellings. Why any Local Authority would carry on regardless is beyond comprehension, particularly when you add in the COVID-19 factor.</p> <ul style="list-style-type: none"> Secondly, in its handling of informing the public about the existence of the Local Plan, one has to raise the issue of whether DBC is merely incompetent, or has deliberately adopted a policy of letting as few people as possible know about it. <p>As I write this, it is Sunday 28th February 2021-</p> <p>I have received absolutely nothing from DBC to inform me that there was a local plan and that they were very keen to have my views on it.</p> <p>Yet I have been paying DBC council tax at my current address for 34 years. My up-to-date email address is linked to my Council Tax Account. They have my mobile phone number. I have been on the Electoral Register for the same time. They empty my bins every week.</p> <p>Yet, DBC cannot write to me, put a leaflet through my door, send me a text message or an email to let me know about this plan.</p> <p>How many other residents are in the same position?</p>

- Thirdly I am concerned that DBC have deprived many residents of their democratic right to have a say in this consultation process.

Without access to IT and the capability to use it many people have effectively been excluded from having their voice heard.

The “virtual” presentation room says that documents can be ordered to view from local libraries.

This consultation appears to have been launched on the 27th of November 2020 and extended until 28th February 2021.

That is 89 days. Taking into account lockdowns and Bank Holidays there appear to have been 19 days when my local library has been open.

When the advice from the Government since 5th January 2021 has been

- ***shop for basic necessities, for you or a vulnerable person.***
- ***go to work, or provide voluntary or charitable services, if you cannot reasonably do so from home.***
- ***exercise with your household (or support bubble) or one other person, this should be limited to once per day, and you should not travel outside your local area.***
- ***meet your support bubble or childcare bubble where necessary, but only if you are legally permitted to form one.***
- ***seek medical assistance or avoid injury, illness or risk of harm (including domestic abuse).***
- ***attend education or childcare - for those eligible.***

going to the library to obtain consultation documents does not appear to be a justifiable activity.

Location of Proposed Developments in Northchurch

The proposed sites between Bell Lane and Darrs Lane are totally unsuitable because of

- 1 Restricted access roads (single track/no passing places)
- 2 Already congested side roads and around shops on Northchurch High Street with limited parking space.
- 3 Loss of wildlife habitat and green space

Site off New Road to north of canal

Completely unsuitable for Housing development

Because of

- 1 Emerging traffic onto restricted width road close to Primary School with single track canal bridge
- 2 Loss of wildlife habitat and green space

It appears that that no Traffic Survey has been carried out in relation to these proposals which I believe is a requirement.

If one assumes an average of 2 motor vehicles per dwelling, for Berkhamsted that is at least an increase of 4472 vehicles on a daily basis trying to negotiate the already congested streets, adding to pollution.

I also understand that no wildlife habitat survey or archaeological survey has been carried out around Northchurch and that these are also requirements.

I urge DBC to listen to these real concerns and delay this process until after the pandemic is over which will give time to allow meaningful consultation and take into account how the change in government guidelines affects the building targets set for local authorities.

QUESTION ANY OTHER COMMENT comment

1. Process and consultation.

Becoming informed of the necessary level of detail to respond to this plan involves and huge investment of time and research effort. Very few Dacorum residents will have the time and hardware necessary to respond in the way expected. Most of our neighbours were completely unaware of this most significant strategic document.

In normal times, such important changes as proposed here, would be discussed in Council Chambers and public meeting rooms. The Covid pandemic has rendered public discourse almost impossible. Zoom meetings between the tiny proportion of informed and technically competent individuals is no substitute for proper public debate and scrutiny. We were unaware that there was a booklet produced by the Council outlining the proposals until late February and as far as I know, no one in Dudswell received one. This has led to a late flurry of interest in a most important plan which will affect us all.

No doubt the Council will assume that people who don't reply are content with the suggested changes. This assumption would be false. Everyone I have been in touch with is distressed by the enormity of these intended changes.

This response cannot hope to summarise all my feelings and comments about this massive document. In short, my opinion on most of these matters is congruent with that of the One Voice Alliance and I fully support their submissions.

Finally, the Plan was drawn up long before the present government's stated aim of 'levelling up' provision of housing, employment and services between the North and South of England. If this Government plan comes to fruition, the starting assumptions which informed the DBC plan will no longer be valid.

QUESTION ANY OTHER COMMENT comment

I am providing comments on behalf of Tring Youth Town Council of which I am the Clerk

Young people are very concerned at the extent of planned housing in Tring. The fact that so much green belt land will be destroyed goes completely against the Council's commitment to climate change goals. This vital environment is critical to our future sustainability.

The completely out of proportion amount of housing for Tring (55%) compared to other areas of Dacorum does not make sense. We simply do not have the infrastructure and road layout to support this many new families. We already struggle with doctors appointments and school places and parking is just hopeless already.

We would definitely want to see that enough truly affordable housing is introduced so that young people have a chance to stay near family in the area they grew up. The cheapest house on the LA5 development is £400,000!

We are not saying that Tring should have no new housing just a proportionate amount to the existing number and certainly a fairer share of the whole number for Dacorum

With regard to retail we think that there needs to be more emphasis on the High Street and improving this and filling the empty units we have now. The Auction Rooms and Museum bring lots of people into Tring who use our shops and restaurants and this would be lost if these are replaced with a supermarket of which we already have two. The Auctions have historically employed young people in their first jobs and in our view play a hugely important part in recycling and affordable furniture for young people.

Thank you

QUESTION ANY OTHER COMMENT comment I would draw attention to the lack of adherence to principles of democratic accountability and transparency – who identified the site at Long Marston? What was the input from developers? Why have local villages which would be significantly impacted by the development not been informed at an earlier stage of the the proposal? Residents of Wingrave were only made aware of the proposal on Friday night, February26th - two days before the deadline for comments
Please exclude this site from your Local Plan given the extensive evidence of its unsuitability on so many grounds.

QUESTION ANY OTHER COMMENT comment	<p>I question the level of security surrounding the completion of this form. I had to telephone DBC because despite registering, I received no e-mail confirming my registration. I tried to reregister again but of course the username I had chosen was already taken (by my previous attempt to register). Fortunately, I was able to talk to someone who helped me and more importantly, this happened before the weekend that the consultation was to end. My wife was not so lucky.</p> <p>With almost a terabyte of data, I consider the amount of information residents are expected to digest, is simply too much. Many of us are working people and do not have the time to properly evaluate all that is being presented.</p> <p>During the grip of a devastating pandemic, many are unable to give this the attention that it duly deserves. With a staggering increase in unemployment, a shocking death toll, virtual house arrest for many, I am not at all sure that the consultation should have taken place at this time.</p> <p>I understand that the consultation is open to everyone and anyone. Those taking part, do not have to be Dacorum residents. I understand that even developers can participate. When one of sales the pitches for new homes in Dacorum, is that we need to commit to provide housing for our children, then it would be reasonable to ask why non-Dacorum residents and developers form outside of the area can take part in this consultation.</p> <p>I understand new homes quotas are being directed from central government and that DBC, like other local authorities, has no say in the demands and figures it receives. I would however, question the substance behind these figures and also, just why the figures are so high for the South East.</p> <p>Unfortunately, I have not had time myself to say all that I would have liked. The deadline for the consultation is today. I have only touched on my full opinions.</p>

QUESTION ANY OTHER COMMENT comment	The plan is fundamentally flawed. It is a quick fix that takes a dangerous disregard to our heritage, our environment and our ecology and biodiversity. It is a massive overdevelopment, with little regard to sustainability and the urgency of the climate and extinction crises that we face. It is a land grab on our green belt, and takes little regard of the cultural, ecological and social significance of the green spaces it has identified for destruction. It plans for too many houses where there are too few jobs, and where, inevitably, it will impose a strain on overcrowded commuting links. It will overwhelm local towns, particularl Tring and Berkhamsted, and put a strain on our communties, our transport links and our local facilities. I have noticed, during the pandemic, the massive increase in people accessing our nature reserves and SSSIs. This has led to a massive deterioration to our footpaths, with some areas becoming a complete mudbath, and with consequent large scale impacts on our biodiversity. While the increased interest in nature should be welcomed, it shows that our existing nature reserves and green spaces are insufficient for the demand. This proposed development does nothing to

increase these areas but will masively increase the impact on existing areas. It shows an appalling lack of regard for our ecology and our biodiversity.

The plan must be thrown out and completely rethought, building on our experiences through the pandemic. The world has changed, this plan must change too.

QUESTION ANY OTHER COMMENT comment

Overall the plan is unambitious, unimaginative and outdated, it does not offer any distinctive vision for Tring. As it stands it will completely change the character of the town for the worse and result in the loss of highly valued wildlife and greenspace.

The proposed increase in housing numbers (over 2700) are not justifiable for Tring. Numerous local groups have produced evidence on required housing numbers which should be used to push back on the government. Dacorum should be fighting to protect the things which make it so special, it's countryside and historic towns, instead of readily giving it all up to developers.

Development on the Green Belt should be an absolute last resort. If development is to happen the plan needs to be much more ambitious and determined in protecting and enhancing remaining areas and mitigating the impact on those areas which are developed.

I would like to also add a general objection to the timing and way in which this consultation has been carried out in relation to the Covid pandemic. I appreciate these are difficult times but I feel strongly that the council should have postponed the consultation until restrictions were eased to enable face to face consultation events, physical displays for people to visit and to ensure people have the time and headspace to address such an important issue.

QUESTION ANY OTHER COMMENT comment	<p>This is a flawed Local Plan that should be withdrawn and re done correctly.</p> <p>I would like to add that 85% of Dacorum is rural, 60% is Green Belt and 33% of the countryside is within the Chilterns AONB. Although the Local plans states that a key objective is "minimising and managing the requirement for development on Green Belt Land and the impact on the Chilterns AONB", it is clear that in their declared mission to provide at least 100% of their self-assessed housing need, regardless of the impact on the environment, infrastructure, climate change and biodiversity will cause significant harm to our local Green belt. it also jeopardises plans, currently under early stages of discussion, to potentially extend the AONB or upgrade its status to that of a National Park.</p> <p>Nearly all development proposed in this plan will be on Green Belt land. The Minister of State Robert Jenrick said on 16 December 2020 on the recent consultation (Changes to the Planning System August 2020) ... " we heard clearly through the consultation that the building of .. homes should not come at the expense of harming our precious green spaces. " on that same day the Government published a response to the recent white paper consultations and said (in reference to protected landscapes and Green Belt): "We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places."</p> <p>The Strategy fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is probably going to be much higher than estimated. Please look at regeneration of previously developed land instead of proposing to build on Green Belt.</p>

QUESTION ANY OTHER COMMENT comment	<p>Increases in houses are too much: 24% increase in housing in Berkhamsted 31% increase in the Urban footprint 55% increase in housing in Tring Berkhamsted has a town centre which can't expand and can only feasibly be accessed by car from the proposed development sites. In adequate parking will result in new residents driving elsewhere with all the inherent polutyion and congestion.</p> <p>An additional 2200+ houses with minimal increase in employment opportunities and potentially a reduction if the Jewsons, BFI and Civic centre sites are developed. More commuting, more pollution, more congestions. All unacceptable these days. This plan barely nods to the enviromental challenges we are facing. Where are the carbon neutral targets and zero emission housing?</p> <p>Government imposed housing figures of 1023 per year up from the 922 in the plan, more than twice the 497 pa based on the latest 2018 ONS projections. Why?</p> <p>There is a huge amount of development on Greenbelt. This should be challenged.</p> <p>There are limited proposals to address traffic/congestion issues - just a few improvements for cyclists and pedestrians, additional crossing points, tactile paving at junctions etc and some additional footpaths along the south side of Shootersway. All very light touch and inexpensive.</p> <p>Where are the improvemnts to local employment opportunities to. reduce commuting need? Very light touch again.</p> <p>This plan looks light it is focused on 1. keeping the government happy and 2. increasing income for DBC.</p>

QUESTION ANY OTHER COMMENT comment	<p>From my reading of these planning documents, it would appear that Site 155 (Long Marston) has been discounted and will not be going forward in the Local Plan. Assuming I have read this correctly, this is absolutely the right decision:</p> <ul style="list-style-type: none"> - the site assessed by AECOM around Long Marston is subject to prolonged and deep flooding (once again this year). It is patently unsuitable as a location for multiple housing, as huge drainage alteration capital and operational costs would be involved - the area is very rural, with no road or rail links of any size. To connect to any transport infrastructure (e.g. A41 road, or Cheddington railway station), very large investment would be required. This would involve very significant change in a completely rural area. - the area is crossed by major power lines. Again, to resite or reinforce these assets would be hugely expensive. - since the rationale and activities for the Local Plan have been undertaken, we have endured a Covid pandemic. This has changed forever the nature of work, transport, housing requirements and sustainable development. There is a very major risk that the current Dacorum planning process (specifically including the Local Plan) is out of date, and a positive hindrance to post-pandemic recovery growth. Time to rethink the entire approach, not press on with a process that is no longer fit for purpose. <p>I hope that I have interpreted these plans correctly, and that Site 155 (Long Marston) never appears in any future plan for development. It is, and will remain, wholly unsuitable.</p>

QUESTION ANY OTHER COMMENT comment	<p>This is the most important decision for the community in a long time. Two clear issues which mean we must consider deferring this decision for at least 2 years:</p> <ul style="list-style-type: none"> We are in a pandemic and the community and local businesses are already reeling from material personnel and financial challenges. It is simply not the right time for the community to have the time to make a decision that will impact everybody - how will a Nurse on the front line be able to respond to this now - is it fair they can't have a say? There is a housing challenge in the UK but right now it is unclear where the housing is needed post the pandemic. The data from 2018 already shows that there is no requirement for the level of housing So again not the right time to start destroying the Green Belt.

QUESTION ANY OTHER COMMENT comment	Why does Dacorum need 25% more houses/people/cars/pollution/noise/water usage and crime? Who actually stands to benefit from this expotential expansion in the existing community? Rather than trying to protect itself, the Green Belt and its residents, Dacorum is allowing itself to be used as the dumping ground/overspill area for other parts of the country.

The Local Plan needs to regenerate the local area brownfield sites, provide high quality family housing, new schools and leisure facilities and better infrastructure for the CURRENT RESIDENTS. Creating a soulless, new build dormitory town will destroy all the character of the local area. We might as well go and live in Milton Keynes!

QUESTION ANY OTHER COMMENT comment

I have not found the review and comment process for this document simple, hence I am giving my comments here, as it not clear where else they would be appropriate.

My number one concern is the timing of these plans. It is clear that the pandemic has changed many things irreversibly. We have all been asked to put our lives on hold for the last year and it seems clear to me that any plans should be revisited once full account has been taken of the impact of the pandemic on future lifestyles etc. I believe that a lot more land in cities will be available for housing in future as less people travel to work and shop in them. The public's relationship with green land and open space has also changed dramatically and these things are more valued than ever before. It is therefore imperative that green belt land is not used for building where there are alternatives, and this should be revisited after the pandemic. The value of local community has also been highlighted by the pandemic and any development that significantly changes communities needs to be carefully considered in a way I do not feel is happening in relation to this local plan.

It is the development to the East of Tring that is of most concern to me, due to the incredibly large number of homes that are proposed which will change the character of Tring and Tring Station significantly. I am not at all reassured that the development will properly address the challenges of climate change and that innovative, cutting edge housing will be built rather than an identikit large-scale estate. The sheer increase in volume of people in the area will have a significant detrimental impact on enjoyment of the greenspace and AONB both for residents and those who visit on a daily basis.

I appreciate that Government are setting high pressure targets for housing and this comment is directed not only at Dacorum but at Government planners who I believe should also take time to take stock of what has happened during the pandemic and how this may have impacted possible solutions.

Although the strategies say that environmental and climate change impacts have been considered, it is easy to make these statements and I do not have any confidence that this is in fact the case and that it has been treated as the overriding consideration.

QUESTION ANY OTHER COMMENT comment

The consultation has been pushed through in the midst of a pandemic and insufficient time has been given to people to be able to properly consider and provide feedback on respect of the local plan.

The overall level of housing proposed to be built in Dacorum is disproportionate. Much of Dacorum is green belt and therefore such a large housing target puts a significant strain on this borough.

the green belt exists to prevent development, preserve countryside and to stop urban sprawl. As a result of these housing targets and the proposed plans (I note in particular the west Hemel area, existing development between there and Bourne end, and then the proposed areas being removed from green belt to extend Berkhamsted) will effectively lead to ribbon development from Hemel Hempstead to Berkhamsted, particularly if the Thakeham Bulbourne Cross proposal gains traction.

Whilst building homes is important given the issues with housing stock, it must be genuinely affordable and not development of 'executive' 4 bed homes. And it must be focussed on regeneration and urban space and NOT in the green belt. Backed by infrastructure required-many towns of similar size to Hemel have intercity train services, theatres, music venues, much better community facilities. It makes sense for Hemel Hempstead to have the majority of the burden of new housing. But Hemel simply does not have the infrastructure to support. We have virtually no cultural centres for the community eg a major theatre. Sports facilities are at high capacity. Many of the new houses will have commuters. Our train service

is appalling, has low capacity, and only 'slower' trains these days. Traffic in town and in Boxmoor is increasingly difficult. The plan does not effectively deal with the infrastructure and community and cultural centres needed to support such a significant population increase and infrastructure burden.

The problem in Berkhamsted is worse. Traffic in town is awful and the new development areas being proposed will add significantly to traffic and congestion through the high street and london road to Bourne end and Hemel.

The Thakeham proposal being touted (which I note is not in this consultation but the developers are pushing hard) is completely unacceptable. It will merge Berkhamsted, Bourne End and Hemel. It has significant loss of green belt. Valuable community sports facilities currently in town and easily accessible will be lost and sited almost in Hemel! Everyone will have to drive to it causing pollution. It is simply not sustainable development. The local authority should instead focus on how to improve community facilities and sports facilities within town itself.

QUESTION ANY OTHER COMMENT comment	The addendum suggests a new settlement at Long Marston (155L). Yet it does not address the many apparent problems with the location and I strongly object to development on this site <ul style="list-style-type: none"> - it is virgin unspoilt countryside in a peaceful rural location populated only by small villages and farms. This development would ruin the area. Some areas need to remain undeveloped to as to maintain some rural heritage and character. - the site would be highly visible from the surrounding area and would destroy the rural view from the top of Ivinghoe Beacon - the area is a flood plain and is very wet and would potentially have drainage issues - there is no road infrastructure only small country lanes that could not cope with the increased traffic of such a development

- parking capacity at cheddington station is small and parking on the road is already a problem. Train service is irregular, as is the local bus service. The local roads are not suitable for the passing of many large vehicles such as busses
- there must be many more suitable sites better connected to the road networks and local towns with much closer access to the A14 and in areas already spoiled by development and roads in the Tring Berkhamstead and Hemel Hempstead area.
- the A41 is already at capacity and with up to 30 min queues to join the M25 some mornings. Additional traffic will make this worse. How would this be addressed?
- Valuable ancient hedgerows and the wildlife habitat would be destroyed. There is an abundance of wildlife whose habitat would be destroyed
- the parish name is Tring Rural. But it will not be rural any more with such a development.
- there are no schools shops or medical facilities in the area to support such a development

QUESTION ANY OTHER COMMENT comment

I totally get that this is a massive Housing Plan and to compile a consultation exercise is complex. However as a lay person I have found it extremely difficult to access this site and to find the appropriate place on which to make my comments. All I really want to say is that Green Belt Land should not be used for development and therefore the plan should be amended. The Plan will waste acres of farmland and cause permanent damage to the Chilterns Area of Outstanding Natural Beauty.

QUESTION ANY OTHER COMMENT comment	In light of lockdown for a considerable length of the time in which this consultation has taken place, we feel that our little community has been deprived of proper information and guidance. There are: elderly residents who do not access the internet for information, if indeed they even have broadband; families home schooling with access to IT focussed on the

children; working from home and furloughed as well as essential workers all thinking about Covid now not planning for next summer let alone years ahead.

Low levels of response should be taken as low levels of information and the public voice is not fairly represented by some areas having better councillors than others.

Our neighbourhood network has been unable to bridge the communication gap as no public exhibitions or information displays such as at libraries have been available. No local authority leafletting has been distributed, in fact the most prominent planning communications have come to Bourne End from Thakeham mailshotting for support to come forward as an alternative site for housing with out of town sports facilities which they claim is for the benefit of Berkhamsted, forgetting that it is to the detriment of Bourne End. Our community is united in opposition to Thakeham, it is divided in its attitude to Dacorum as protector of this small community in the green belt countryside buffer between Hemel Hempstead to the East and Berkhamsted to the West, with the large village of Bovington at the top of the hill to the South and the canal, railway and farm land to the north.

QUESTION ANY OTHER COMMENT comment	I wasn't aware of this plan until my mother told me about it today. I live in Grovehill and haven't had any leaflet drops about this plan. So I haven't time to read and comment on the plan fully. I am not happy that you are getting rid of beautiful countryside and replacing it with houses. How can you build on greenbelt? How is this allowed? Grovehill is high density and what makes it a nice place to live is all the countryside on our doorstep. With the new developments it is going to become more like an inner-city area. Who is going to be able to afford to live there anyway? I'm a homeowner and would not be able to afford to move to a more expensive property (the ones that are still for sale at Upper Bourne End are over £500,000 and other new homes in Dacorum on infills are even more expensive). Wages are stagnating and with taxes, either income or more hidden, likely to rise to pay for the pandemic who will be able to buy the houses

that are not 'affordable'? I have been working from home during the pandemic and am likely to be able to at least do some of my work from home after the pandemic. Therefore, a move away from Dacorum to somewhere cheaper (for example Bedfordshire) and less built up would make more sense, than buying what is likely to be an overpriced new home in Dacorum. I get the impression that Dacorum is wanting the developers (and in effect the purchasers of the non-affordable new houses) to pay for new infrastructure even where this infrastructure will benefit existing residents as well as new ones. This doesn't seem fair and will make the homes more expensive.

QUESTION ANY OTHER COMMENT comment	My comment specifically addresses the carefully hidden appendix which states that the Council independently put forward a proposal to build 3800 homes close to Long Marston as one of the options within the plan. This proposal clearly runs roughshod over ALL of the aims and themes put forward in this vast document and seeks to destroy an area clearly part of the overall beautiful landscape to the west of Tring. The only compelling reason for the proposal appears to be the lack of other suitable sites for a large scale development of this nature and the scale of the proposed plan is indeed vast, covering an area equivalent to Long Marston, Puttenham, Astrope and Gubblecote COMBINED. 3800 homes equates to some 10,000 people coming and going to and from an area poorly served by roads, accessible mainly over small, single track structurally unsound canal bridges, most of which would require expensive and extensive work to expand and strengthen. Currently the area is poorly served by public transport with few buses traversing very minor roads and an unmanned station a long and hazardous cycle ride away. The current footfall in the main amenity areas of Ashridge Forest, Tring Reservoirs, Tring Park etc is already having a hugely detrimental effect on the sites and a significant development in this area would make this situation very much worse very quickly. I hesitate to even mention the existing flooding problem in the local area, Long Marston being underwater for most of the winter 2020/21 both in the village centre and the surrounding fields which even as I write are still awash. As another commenter has said, this world post the Covid pandemic is very different to the one you saw when this plan was conceived and the changes in the way our world operates must be taken into consideration and a new plan conceived based on the reality of today rather than yesterday, we as a nation work and live very differently now and most sources agree that this will continue to a large extent so our living/working strategy has to reflect that.

QUESTION ANY OTHER COMMENT comment	The plan as presented responds in a flased manner to government policy that has since changed. Dacorum should also have changed its strategy.

The plan is for far too many houses and in the wrong locations. Focus on massive development on primarily green belt areas is misguided at best, fits the ease of developers but incurs lasting harm to the environment around Tring.

A massive increase in excess of 50% housing capacity is harmful and will overwhelm Tring (and Berkhamsted). Not only facilities but the very community, the people, will be overwhelmed by such a massive increase in short time frame. All while responding to out-dated requirements.

The areas include examples of rare chalkland streams, wastes acres of farmland and damages the Chilterns Area of Outstanding Natural Beauty. This legacy will not benefit the next generations but instead serve as an example of poorly thought out policy and execution on a scale even greater than the 1960's and 70's rush to concrete high rise developments so disparaging and poorly thought of now.

There are too few local jobs to accommodate such a massive increase in population. Even with increased work from home policies that may emerge from the current Pandemic this cannot support such a massive population. This will increase pressures on the community and individuals, not ease them.

By straining the natural eco system, negatively impacting the Area of Outstanding Natural Beauty, straining local infrastructure, stress on local economy amongst other negatives the plan is harmful, not sustainable, poorly thought through. It responds to policy since changed. It is flawed and should be re-considered before lasting harm is done on so many aspects to so many people.

QUESTION ANY OTHER COMMENT comment The Plan, particularly in relation to Berkhamsted / Northchurch / Tring, seems to largely disregard the impact on people living in those areas and the reason they choose to do so, namely: access to open space; surrounding green belt land; a reasonably balance of housing density. It also ignores the impact on already strained infrastructure and services.

Infilling areas of green space will forever change the nature of this borough for the worse, and the number of houses proposed in already congested towns will radically reduce the quality of life for existing residents.

The Strategy proposes that substantial areas of the Green Belt around Hemel Hempstead, Berkhamsted and Tring alongside the AONB boundary should be allocated for housing. I understand that this is contrary to national policy, the Strategy's own policies, and both the Chilterns Conservation Board (CCB) Management Plan 2019-24 and its Position Statement Development Affecting the Setting of the Chilterns AONB (2011, revised 2014).

The proposed local plan prioritizes meeting an excessive level of housing need over protection of the Green Belt on the assumption that this is required by national policy. This assumption is incorrect. Exceptional circumstances for meeting housing need in full have to be shown, and have not been demonstrated in the consultation documents.

QUESTION ANY OTHER COMMENT comment

The Local Plan has directed allocated sites to the major towns within the authority and specific selected villages including Kings Langley, Bovingdon, and Markyate. This approach, severely limits the opportunities for new development within other villages that have sustainable credentials that could support small/medium development sites and SMEs.

It is therefore proposed that the site at Rainbow and land north of Rainbow should be considered for allocation of up to 10 dwellings, and included within the list of Appendix 2 – Identified Small Housing Sites (<1 Hectare). Not only would this promote a small/medium size site that would support an SME development, but it is a highly sustainable location

within Piccotts End, near to and with easy access to Hemel Hempstead to the south and with potential links through to the proposed Hemel North.

In conclusion

This letter has set out a response to the policies proposed in the new draft Local Plan, and particularly highlights that to be consistent with national planning guidance within the Green Belt, Piccotts End should be defined as a village within which limited development is allowed in principle.

This letter also makes a case for extending the settlement boundary to include Rainbows and land to the north of Rainbows, Piccotts End Lane, and to identified this site as a housing allocation on the Proposals Map and within Appendix 2 of the new Local Plan for up to 10 dwellings.

QUESTION ANY OTHER COMMENT comment

I appreciate the need for a strategic plan and commend the amount of work which has gone into it.

I question the fundamental estimate of housing need. There seems to be no consideration of any deviation from the number of homes required. I would like to see what is planned if the requirement is, say, 20% greater; and which homes would not be built if the need diminished i.e. some contingency planning.

I am not clear that the effects of covid-19 on behaviour in the borough has been thought through when I read for example that Dacorum needs additional retail space. Are we really expecting the movement of retail sales from the High Street to the internet to be reversed?

My remaining comments are made because at this stage the Strategic Plan does not provide detailed answers. As an inhabitant of South Berkhamsted I worry about the following:

- i) The amount of traffic along Shootersway which has already grown with the original Bearroc Park development and is bound to increase still further as the second stage is completed.
- ii) The plan states that open space will be provided and existing trees retained. With housing running the entire length of the A41 from Darr's Lane to Northchurch Lane (and beyond) it is difficult to see how the existing greenery can be maintained.
- iii) The closure of the foot crossings of the A41 have already extended the distance of any circular walk along NC21 and 22 from Berkhamsted. During lockdown Shootersway has been much used for exercise. With housing as far as Darr's Lane and heavier traffic walking on the North side of the A41 will become unpleasant.
- iv) I understand that Dacorum Borough cannot directly provide most types of infrastructure. However I am concerned that primary health care in particular may not be sufficient if the proposed number of homes are really required. Conversely I wonder if the educational infrastructure sites might not all be required. I hope that coordination between the various bodies is effective.
- v) I note that you have provisions in place to reduce flooding risk. I just hope they are sufficient when even now water running east along Shootersway can flood garages. With concrete covering the slope down to the Rossway land large quantities of water will have to be moved away quickly.

QUESTION ANY OTHER COMMENT comment	I just feel that the plans submitted are so wrong for Tring! The high street has been diminishing for some time with many outlets closing, there needs to be a real push from the council to encourage people to come and visit the town for leisure purposes - parking is needed for this as mentioned before. There is already so much building work on the outskirts of

the town, I think an in-town development in addition to further development on green belt land will start to rip the heart out of the pretty market town we love.

QUESTION ANY OTHER COMMENT comment	<p>Air quality management areas (AQMAs):</p> <p>Areas designated by local authorities because they are not likely to achieve national air quality objectives by the relevant deadlines. <i>(National Planning Policy Framework, February 2019)</i></p> <p>This Cannot be ignored just because "not likly to achive objective" It should be met and developing in and around Lawn Lane/ Ebberns Rd / London Road its making it worse , how were these developments passed knowing there was a AQMA. With the incease in development across Hemel Hempstead There needs to be greater infrustructure to divert traffic from St Albans Hill/ Lawn Lane into Apsley/ A41 The Junction at Lawn Lane Belswains Lane is at the point of the AQMA as it stands and is a very dangerous junction (inadequatly marked) I have CCTV evidence of approx 15 near miss accidents a day at that location. With the development it cannot cope with an increase in traffic. The lights manamgnet system in Durrents hill road causes a back up of traffic into Lawn Lane now, so its going to be gridlock with increase in traffic to the retails areas in Apsley. A new route needs to be considered or relocation of the retail area with access from a major route not a residential road- this could be used for residential and as it is near town and railway and the new proposed cycle and walkways may decrease the traffic use along the forementioned routes.</p>

QUESTION ANY OTHER COMMENT comment	<p>I am also very concerned that many of us have been unaware of the full extent of the situation, and if they knew would be equally as appalled. People have not always got the time, energy, or means to stand up against such political decisions. Yet this seems even more under-hand as this has been pushed through during a time of national pandemic, when people have been asked to stay at home, shield, isolate and are generally suffering the blow to both physical and mental health. Communication means have not been normal and we have all had many other concerns to face during this period. This feels as though things are moving forward with very little consultation, as during this year of pandemic, people have needed to focus on problems within their own households, not having the ability to socialise and therefore learn of the</p>

local news, and no time to research into any rumours that we might have heard about proposed building. This is not giving residents of Northchurch, Berkhamsted and Tring and surrounding areas enough time nor ability to respond.

I want to know exactly how many acres of Greenbelt land would be lost, and how much our population would increase. There needs to be honesty and transparency in these proposals, and the opportunity for each and every resident to have their say.

Please can you reconsider this proposal for development and look at the impact on your beautiful towns and villages and the people that live in them.

QUESTION ANY OTHER COMMENT comment	<p>I've reflected many times on the content of this Plan.</p> <p>Each time my sense that it lets the residents of Tring down increases - although I'm aware that it is incomplete and also the pressures the Planning Dept is subject too.</p> <p>However I have to conclude that it feels rushed and far from complete. The underlying numbers are really not justified and the associated plans for how to protect what makes Dacorum distinctive are sorely lacking in vision and ambition. A Local Plan should be something aspirational that most of the people of the Borough can stand behind....and it is not there. Furthermore I cannot see how there is enough time for the limited resources to process all of the feedback and respond properly.</p> <p>I'd like to propose that DBC adopt a different approach going forward and find a way to engage with local organisations to working towards the Section 19 version. As a minimum I'd like to see visibility of the next steps.</p> <p>We have already submitted much of our commentary in electronic form, however we encountered several issues with formatting and so have consolidated <i>all</i> of our comments, and additional material, in the enclosed PDF.</p> <p>We have reviewed the Local Plan and supporting materials thoroughly and have a number of serious concerns. In attempting to accommodate vastly increased (and unjustifiable) housing numbers it fails to meet its own stated objectives, uses flawed assumptions in several places, and is disappointing in its lack any real 21st century vision. We have referenced why we reached these conclusions in the attached.</p> <p>In addition, throughout the process we have engaged not only with our core membership but with over 3500 people (through online presentations, downloads of our materials etc.) and have found they <i>all</i> share the same concerns.</p> <p>Finally, through collaboration and discussions with other organisations, we also agree with the common position held by the <i>Chiltern Society, Chiltern Countryside Group (CCG), Grove Fields Residents Association (GFRA), Berkhamsted Residents Action Group (BRAG), Kings Langley & District Residents Association (KL&DRA), Berkhamsted Citizens Association</i> and others forming the 'One Voice' Alliance, to oppose the Local Plan because:</p> <ol style="list-style-type: none"> 1 Whilst the policy on biodiversity is clear, the emerging plan is not explicit enough in terms of how Dacorum Council will work with developers and other stakeholders to mitigate Green Belt loss, increase biodiversity and meet National and Hertfordshire's goals for climate change and carbon reduction

- 2 The proposed number of houses to be built should be significantly lower than the target to reflect **actual demonstrable need** for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes
- 3 A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and **away from areas located in the Green Belt** (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.

Give the enormity of the gap between the draft Plan and where it needs to be, and the relatively short time period to address these, we are prepared to help DBC constructively in the coming months and will be in touch separately in order to explore how best this might be achieved.

The Plan, for reasons that are not clear, conveys a message that growth far in excess of that necessary, along with the significant loss of Green Belt, is a *fait accompli*. This is in stark contrast to previous versions of the Plan and is not aligned with the clear wishes of the vast majority of the Borough's population.

Despite many welcome, positive intentions expressed in the Vision and Strategic Objectives, the Plan feels – at present – more like a 1980s', developer-led charter than a guide appropriate for the 21st century.

We believe that Dacorum would be strongly supported by its populace if it grasps the opportunity to make a few significant and bold changes. Many local groups would be willing to share the workload.

In particular, there is scope to be bolder: presenting evidence to push back on Government targets, being less reliant on developer proposals; and recognising that the role of a Local Plan should be as much about the proactive development and protection of our natural environment as it is about developing and enhancing our built environment.

The real reasons for the excessively high housing growth numbers in the Plan are not explicit – especially for Tring where the relative increase is almost three times higher than the next most impacted town (and this in an area which, even according to presented evidence, is least well suited to such an increase in terms of adverse impact on the environment).

The proposed numbers are already in excess of that required by the Government. We would point out that Dacorum Council is well within its rights to push back on these numbers (even if they are reduced significantly) when it can be shown to result in inappropriately high impact on other important measures. We have touched on many of these earlier in our response.

If the numbers were driven by calculations for generating a required level of CIL income (e.g., the notion that excessive extra houses have to be built in Tring in order to fund a new secondary school - which is only required because we are building so many new houses) then these assumptions need to be fundamentally challenged. Again, if the numbers do not work out it is further grounds for pushing back on growth, NOT to accelerate it.

In the 21st century Green Belt becomes arguably more important. This was once recognised in Dacorum's own strategic planning guidelines. There is a strong case that Green Belt should, in fact, be proactively enhanced in order to help meet carbon-emission and biodiversity goals, provide the sort of wild green recreational spaces that are increasingly in demand, and also provide economic growth (recognising that Dacorum – and especially Tring – is increasingly becoming a green 'destination' space).

There is virtually no evidence that this perspective on Green Belt has been acknowledged or understood by the authors of the Plan. This need to be urgently revisited.

The need for ‘distinctive’ development is mentioned several times in connection both with the natural and built environments (e.g., ‘*All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.*’ – Overarching Vision, page 22).

It is not clear how this will be either defined or agreed for Tring, which is arguably the most distinctive settlement in Dacorum in terms of natural setting, social and economic history. Neither is it clear how this will be given ‘teeth’ in order to proactively shape development.

In the absence of a working definition, Tring in Transition has created an initial description of what makes Tring distinctive to help shape what we would expect to see in the final version of the Plan. This highlights our unique heritage and location, including:

- A Rothschild legacy of forward-thinking development, respect for the environment, bold and challenging designs and solutions
- A strong heritage of local renewable energy with significant wind and waterpower
- A location surrounded by more than 50% of Dacorum’s SSSIs, extensive AONBs, as well as extensive hedgerows and other wild places
- A service-oriented, agricultural, market legacy and a traditional destination location to visit, meet, relax and socialise

From these we have also developed four distinct ‘visions’ for improving the standard of developments in Tring. Each responds to one or more of the deficiencies in the Plan and builds on Tring’s distinctive features.

1 ‘Tring Fields’

To help proactively address any loss of Green Belt and meet NPPF guidelines to mitigate the same:

The overarching theme is that each existing field will provide the basis of the layout of any future development. Each will have a purpose, an individual ‘personality’. This may be a cluster of housing, an informal green space, a school, a services unit or a health clinic.

By basing the development physically on the existing field system, we propose that Tring Fields will create an attractive new development in keeping with the adjoining AONB and Green Belt area in which it is built and by which it will be surrounded.

- It keeps the existing green infrastructure of hedges and field boundaries – meeting the requirement for joined green corridors and informal green spaces
- Marshcroft Lane becomes the crowning glory of the development, the central draw and attraction, remaining as a quiet lane with the proposed link road NOT cutting across it.
- The houses are built in clusters in the existing fields, each complying to high energy efficiency standards
- Each cluster will have a particular design and character (an approach already used successfully elsewhere in the UK).
- Community spirit is created by the intimate feel of the individual clusters which still remain part of a greater whole.

To address the need for growth, enhance the existing town centre and correct assumptions apparently carried over from previous planning exercises (traceable back to the 1990s).

We proposed taking a lead from existing '21st-century market town' schemes successfully being deployed in Yorkshire, Stroud etc. In summary, this includes recognising the limited need for new town centre retail space; acknowledging that central supermarkets are more damaging environmentally than those designed to limit travel and traffic congestion; and acknowledging changing employment patterns and social norms (this is especially true for Tring).

- Replace proposals for significant new retail space and encourage more food, experiential, social, entertainment and 'destination' spaces etc.
- Revisit plans for a central supermarket (which will only add to issues with existing traffic hot spots) and recognise the patterns of use from those living in villages to the north of Tring. (Depending on revisions to developments – this could well be at the Bulbourne side of towns.)
- Remove proposals for warehousing and large industrial units on the Dunsley Farm site and build on Tring's heritage as a service-oriented market town by building smaller, more flexible workspaces that reflect rapidly growing local/home-working patterns.
- Revisit plans for Tr06/Brook St: prioritise schemes fronting to the High Street, encouraging food, social and 'destination' spaces.
- Recognise that Dunsley Farm is better suited to residential home development than light industry – meeting both social and employment needs.

To address pressures on local green spaces, SSSIs, biodiversity and Green Belt loss.

The definitions of open spaces, green spaces, green buffers and wildlife corridors need to be more explicit. They are a consistent cause of confusion and question in the Plan. There is a need for all of these, but given the high number of SSSIs around Tring, AONBs, the Beechwood SAC, etc. **there is an opportunity to establish a country-leading if not world-leading scheme where defined wildlife corridors are proactively established around the entire perimeter of the town, through new developments and onwards to local nature reserves etc.**

- Implement joined-up wildlife corridors through and around all new developments
- Explicitly plan to proactively link all SSSIs via wildlife/green corridors
- Provide managed public access through a new network of
- Provide an opportunity for the various organisations managing local wild spaces (Woodland Trust, National Trust, Wildlife Trusts, Chiltern Society, Rothschild Estates etc.) to work together with the Council to design and build this. (An initial poll of these organisations indicates a strong willingness.)
- Recognise NPPF requirement that any Green Belt development requires explicit mitigation and improvement on *other* Green Belt land. (The inclusion of green and open spaces in existing Green Belt parcels earmarked for development does not count towards this.)

To address county and national carbon targets and to reinvent Tring's legacy of renewable energy use. We acknowledge statements about going beyond current government guidelines on new housing insulation. This sounds good but will already be superseded by more demanding targets before we are halfway through the term of this Plan. We are also

aware that developers have pushed back with statements like 'we don't find a market for solar panels' etc. These are, frankly, irrelevant and should be entirely disregarded.

Developments around Tring have a clear and new opportunity to embrace the highest possible standards that can be mandated (if not higher):

- All new developments built to highest possible standards of carbon neutral build and energy efficient operation.
- Renewable energy targets, inclusion of solar systems in new homes (regardless of any developer pushback) should be explicitly mandated.
- See our detailed response to SP24 etc.

QUESTION ANY OTHER COMMENT comment	<p>Any Other Comments</p> <p>To reiterate the following:</p> <p>The proposed number of houses to be built should be significantly lower than the target to reflect actual demonstrable need for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter homes.</p> <p>> A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and away from areas located in the Green Belt (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.</p>

Dacorum Borough Council and our local MP, must challenge the Government on this excessive imposition of house building numbers that affects our Green Belt, Market towns and villages so adversely. This draft plan is not acceptable.

QUESTION ANY OTHER COMMENT comment	The plans have not been adequately consulted within the communities they impact. The consultation during "stay at home" lockdown is inappropriate. Many impacted residents will not have been made aware of the consultation due to limited time out of the home, limited social contact, and the lack of "at home" notification. We did not receive ANY formal communication of this consultation - we only became aware as a result of social media. Furthermore, it has not been possible for any local groups to meet to discuss objections, as would be normal.

QUESTION ANY OTHER COMMENT comment	<p>I received formal notice from the council about these development plans 4 days before the deadline to comment? Is that some sort of strategy to stop people from having their say? Well I am 100% against such a massive amount of houses being built especially on greenbelt areas around Northchurch. The number of new houses planned to be built far outweighs the infrastructure being able support the influx of people coming to the area. The doctors surgeries can't cope at present. The roads are already far too congested. Road safety around Northchurch is bad enough is already. Granville Road is</p>

already an accident waiting to happen with cars driving far too fast and using it as a through road. It is already being used as a rat run to avoid the high street with people in a massive hurry to drop their children off at schools, church activities, cutting through to get to Tescos and also using the Social Centre down Bell's Lane. With the lack of parking it's pretty much a one way road anyway so more traffic will be deadly causing lack of safety for those children who walk to school. More housing in the fields by Darr's Lane will cause more noise and pollution, loss of habitat for the wildlife (bats and owls to name a few). That area up on Shootersway has had enough new builds, why does there need to be such a ridiculous increase in that area? The proposed numbers don't add up? Anyway the main problem is that 4 days is not enough notice to give residents to comment! Where's the democracy in that kind of sneakiness?

QUESTION ANY OTHER COMMENT comment	I have made comments at questions 3, 4, 5, 7 and 24 but overall I feel strongly that the increase in dwellings intended for Dacorum and Berkhamsted are excessive and damaging. Berkhamsted is already bursting at the seams within its border of the A41 on one side and AONB on the other. Its topography, valley location and existing layout do not allow for widening of roads or addition of cycle lanes. Nor can the infrastructure be easily expanded. Being a valley, pollution

naturally settles in the Town and is already excessive on low wind days. The housing numbers proposed are above the ONS calculations and should be revisited. The intention to re-designate Green Belt to provide sites for over 2,000 homes in Berkhamsted is unacceptable - especially when Berkhamsted is within the Chilterns AONB. The proposals would ruin the charm and unique character of our historic Market Town forever, and make it no different to any other densely populated over urbanised town or city in the South East.

QUESTION ANY OTHER COMMENT comment

I believe that the plan fails on several counts:
 1. Disproportionate increase of housing in Tring - a town with little ability to 'flex' for such an increase;
 2. Unnecessary use of green belt land;
 3. Lack of consideration to post-pandemic societal changes

QUESTION ANY OTHER COMMENT comment	The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an

updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

The Economy has changed dramatically since the Pandemic and this should be reflected in a reassessment of the Plan to develop Green Belt land.

QUESTION ANY OTHER COMMENT comment	<p>We are sorry to be so negative and would like to thank your team for the huge effort in producing the draft plan. We do recognise that it is driven by government requirements. We note that the last coalition government was considering new towns as a good solution, where full infrastructure can be planned and put in place before rather than after required. The economic impact of Covid has also led us to see the need for far more council housing.</p>

QUESTION ANY OTHER COMMENT comment	I appreciate that things should continue in lockdown but for something as important and as significant as this should be done when people have the freedom to engage and discuss this issue which will adversely affect so many people. A proposal to increase housing in the borough by 25% on 2000 acres of Green Belt, countryside and urban green space is a major plan which needs to be fully considered by everyone involved. I hope that this is not being pushed through at a time when people cannot easily take a stand or get together to voice their opinions.

QUESTION ANY OTHER COMMENT comment	I am a resident of Berkhamsted, having moved into the area in 1995 with my family. I have studied the proposals around the draft Local Plan and have the following comments: Firstly, and given the importance of the proposals to the future of the whole Borough, I am concerned that the Consultation has been held over the Christmas period and during the pandemic. There are a lot of neighbours and friends within the Borough who seem unaware of the details of the proposals, and even of the Consultation itself. We have had no door-to-door communication from DBC, and with the closure of libraries etc it appears that many, specially elderly, people are completely unaware of the proposals. The timing of the Consultation, being held during the pandemic lockdown and over the Christmas/New Year holiday, as well as during the cold winter period, seems unfortunate.

QUESTION ANY OTHER COMMENT comment	<p>Reference to our chat of todays date on the problems encountered in perusing the “Plan” & attempting to make comments on the computerised comment document.</p> <p>Would you please express my complete exasperation, to the local council, with attempting to understand the content of the “Plan”, ALL 844 pages of it, with its “repetitive & verbose verbiage” & a computerised comment document that would task most IT students to complete, let alone the average resident who spends a very limited time gazing at a computer screen. I have spent hours, over the past couple of weeks, going through the ”Plan” & making comments BUT had to give up completely with trying to make sense of the computer comment document.</p> <p>The “Town & Country Planning Regs.” specify that the preferred method of gleaning information from the Plans should be via a website, BUT Paragraph 035 of the ACT ALSO specifies “Authorities are expected to be mindful of the need to produce concise, visual evidence, written in plain English to help ensure that it is easily accessible to local communities, to avoid them becoming disengaged with the process.”</p> <p>I believe that unless comments are passed on to some higher, more responsive authority than the council, about the apparent tactics to Bamboozle the Dacorum Residents in to passing these far reaching plans, we will still be, being presented with the same situation up to the FINAL document being presented for Government approval.</p>

QUESTION ANY OTHER COMMENT comment	<p>I am writing to object to the proposed local plan.</p> <p>I find it shocking and disturbing that the Council is looking to change so dramatically the size and therefore nature of our local towns.</p> <p>Having grown up in the area and gone to school in Tring, I now live in Berkhamsted with my family. I value the character of these market towns and the amazing natural beauty of the surrounding countryside.</p> <p>I find it very difficult to reconcile how there can possibly be a demand for the level of housing proposed. The statistics on which these numbers are based appear to be already many years out of date and on any basis clearly do not take account of the changes which the pandemic will undoubtedly have on housing needs. The local towns are currently very much in the commuter-belt for London with the inevitable knock-on effect on house prices. With more people working more often from home in future, it is widely considered that people will also look to locate much further out from London. It seems premature to put in place a Local Plan for such a drastic increase in house building before the true impact of the pandemic on working lifestyles and housing needs is known. Given the pace of change in businesses already in the last year, a delay of only a few years may be all that is necessary to get a better handle on what the local area's housing need actually is going to be over the next 10-20 years.</p> <p>I am also particularly concerned about the impact on the local environment. I am shocked to learn that it is even possible to build on green belt land and dismayed at how much of it is proposed to be sacrificed for "growth". The impact that such an increase in the local population will have on the surrounding countryside will surely be immense and in particular will increase the need for water extraction from the aquifer which will threaten the upper reaches of the rivers Gade and Bulbourne, and is likely to leave these dried out to nothing.</p> <p>Finally I consider the way this consultation has been conducted is simply inadequate. We received for the first time today - 25 February - a leaflet through the post with some details of the Local Plan from the Council. This is for a consultation which apparently opened on 27 November 2020 and is to close in two days' time. Fortunately I had recently been alerted by a friend to do my own reading on the plan but I am concerned that many in the local community may not have been aware of the plans until this late stage or even now.</p>

I am also submitting this objection by email as the online portal for doing so is so unwieldy. How anyone who is not online or computer literate is supposed to respond to the consultation I don't know. Limiting the ability to respond to this format must surely be excluding a sizeable proportion of the local population.

I hope that the Council will reflect and accept that this plan needs to be delayed until there is greater clarity on the likely impact of the pandemic. In the meantime the opportunity could be taken to consider further the environmental impact and in particular the purpose and precious nature of the green belt. Once it has been built on, we won't get it back.

QUESTION ANY OTHER COMMENT comment Also, there are many people who are not sure what is happening due to Covid and not be Internet savvy/connected. It would be farer to have issued printed material to all households, Dacorum is happy to blow its trumpet when it has nice things to announce, but this looks like it is being advertised in a very low key way, in the hope that no one will notice, this is, again, unfair to the current people of Hemel, who will be the ones who suffer from the planning decisions of the council.

QUESTION ANY OTHER COMMENT comment	<p>Please take this email as my formal response to Dacorum's Local Plan (2020-2038) Emerging Strategy for Growth.</p> <p>I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.</p> <p>The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.</p> <p>Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.</p> <p>This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.</p> <p>The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses, especially here in Hemel Hempstead. We currently have a hospital that lacks many key departments such as an A&E or a 24 hour urgent care centre and is constantly seeing departments and services removed and relocated to Watford, not enough GP surgeries for the existing number of residents across Dacorum, we no longer have a walk in police station or adequate police staffing numbers, or sufficient schools or residents' parking. Building more housing is going to make all of these areas much worse, particularly when the proposed infrastructure is severely lacking.</p>

I also understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on a local Facebook group but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment

I would like to register my concern at the recently concluded consultation.

The consultation was not publicised. It was incredibly difficult to read the documents with any sense and well nigh on impossible to comment on the plan. I think of myself as IT literate but this stumped me and I was unable to comment.

I strongly believe you should reopen the consultation with proper surveys (either online or on paper) and some easier to read documentation and an easier way of commenting on the plan.

QUESTION ANY OTHER COMMENT comment	The opportunity should be taken to review the defined settlement boundary of Potten End. The production of a new Local Plan is the appropriate time to do this and presents the opportunity which should be taken to update and address the existing anomalous boundary which places houses west of The Hamlet (which itself is within the settlement boundary) which from Vicarage Road outside of the settlement boundary. These properties present a continuous built frontage to Vicarage Road and are well located in relation to the main facilities in the village. To address this the boundary should be amended as shown by a dotted black line on the plan extract below. This will align with the settlement boundary to the south which encloses the housing plots at Hedgeside. The proposed amendment to the settlement boundary will provide a more logical, robust and defensible boundary which will endure into the future.

QUESTION ANY OTHER COMMENT comment	Firstly, the consultation process itself has been conducted during the pandemic and with no physical displays or meetings. There are many people in Berkhamsted who will have been unable to respond to the plan as a result. Many residents, particularly the elderly, do not have access to the internet, so will have been unable to either investigate the documentation, nor submit an electronic response. Furthermore, during the course of the pandemic many residents will have been minimising any journeys made into public centres etc, including a large number of shielders. In short, this consultation fails the tests of the application of the Equalities Act of 2010 as it does not allow all citizens equal opportunity to comment upon it and have those comments taken into consideration: it is directly discriminatory against those residents who, primarily as a result of the protected characteristics of age and disability, will have been prevented from taking part. It is notable in this regard that similar consultations in other areas have been postponed until post-pandemic, raising the suspicion that the Borough does not intend to promote an equal and open consultation, and has deliberately taken steps to avoid doing so.

QUESTION ANY OTHER COMMENT comment	The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an

updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

The Economy has changed dramatically since the Pandemic and this should be reflected in a reassessment of the Plan to develop Green Belt land.

QUESTION ANY OTHER COMMENT comment	<p>I would like to make the following points:</p> <p>To hold such a detailed plan consultation in the midst of a worldwide pandemic is questionable. People are far more focused on other issues crucial to their survival and have been over the past year. This is borne out by the tiny number of responses you have received.</p>

The plan was presented in a way that was not user friendly, salient points were not easily picked out, even by those who are highly educated, let alone those are not. This type of plan should be presented in a clear and concise but fully explicit manner such as an exhibition, with displays that are accessible to all (clearly not possible in a pandemic), for all areas of Dacorum.

The response portal is not at all user friendly and has put many people off responding.

The plan and consultation was not widely advertised and only after much petitioning about this point was literature sent to every household. The literature sent was wholly inadequate and set to mislead about some of the most important (and controversial) posts in the plan.

The pandemic has resulted in massive changes in lifestyle and these are not reflected in the plan, therefore it should be revised in light of these major changes to how we live and work.

It makes no sense to use the 2014 ONS figures with the incorrect algorithm when more realistic projected numbers can be based on the more recent 2018 projections. Using the 2014 figures does not provide an “objectively assessed need”. Consequently the numbers projected are far too high.

Villages will cease to be self-sustaining and become car-linked hubs to the main towns.

Social housing needs for the area will not be met by this plan.

The projected use of greenbelt land should not be pursued and the greenbelt should be protected. Alternative locations must be sourced as a priority and the greenbelt protected.

There is no mention of the Glover report which proposes that the AoNB becomes a National Park. This plan goes against this report.

Climate Change considerations are key. The plan does not address how house building and subsequent use, transport and infrastructure will align with the Government 2025 net zero target. The carbon cost of using greenbelt land is key.

Many of the documents referenced are in draft form and not up to date., including the habitats assessment (2006). There are no Habitats Regulations Assessment Documents .

Biodiversity value change assessments should be included and verified independently.

Most of the developments will be taken by commuters rather than locals as not affordable for locals. Priority and affordability for locals should be key.

Inadequate transport and infrastructure: Provision must be made for sustainable transport from existing and new developments. Most of the new developments are out of town and the car cannot be prioritised for travel to stations (most of these developments will be for commuters and few locals). Bicycle travel must be prioritised. I am too scared to cycle on the roads. My husband has had 3 serious accidents (broken collarbones twice) due to potholes.

The people of Dacorum must have this plan explained to them so that they can understand the full impact of the plan proposals and hopefully realise that it is highly detrimental to future generations and can challenge it accordingly. Having spoken to them, almost all of my friends have no real idea about any of it and the seriousness of it.

The points above should be addressed and the plan put out for consultation in a correct manner once the world returns to some sense of normal... our future depends on it.

QUESTION ANY OTHER COMMENT comment I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment	In addition I have concerns that the timing of this consultation during the COVID pandemic and the winter months means that there are people, some of which are elderly, disabled or on lockdown, that are not aware of it and/or unable to respond. The timing is also unsuitable for properly accessing the conservational impact on the intended housing sites and their surrounding areas. The impact Greenbelt has on our wellbeing and on climate change has not been sufficiently considered. The criteria that for lawfully building on Greenbelt sites needs to show that this is necessary has not been met.

QUESTION ANY OTHER COMMENT comment	<p>— I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown</p> <p>— I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard</p> <p>— Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT felt excluded.</p> <p>— Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home- schooling children as well a dealing with the challenges of CV19 and lockdown.</p>

- The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation.
- There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing.
- The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT.
- It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown.
- People expect consultations to involve public meetings where officers can explain what is proposed and answer questions.
- Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".

I am concerned that developers who are using this local plan consultation for marketing purposes seem to have been able to contact more local people in Northchurch than Dacorum Borough Council has been able to contact. This has caused genuine confusion and distraction from the real proposals under consultation. The 'beggar-my-neighbour marketing techniques, setting one side of Berkhamsted against the other, with promises based on 'visions' of what might be possible, have influenced the responses of residents. This is apparent from the conversations I have had with the small proportion of residents I have managed to reach in zoom meetings and on the phone. In normal consultation processes, meetings in village halls would be the norm with officers on hand to answer questions. In such circumstances, the influence of aggressive marketing campaigns could be reasonably counteracted by representations from officers or elected representatives. The combination of a lack of publicity; lack of opportunity for public presentations and Q&A sessions; lack of ability for representatives to talk to residents on their doorsteps or in their homes balanced against an aggressive well funded marketing campaign has the potential to distort the public responses. It is fair that these concerns should be recorded and factored into any analysis of the responses from the public.

During the time of the consultation, because of the threat to the identity of Northchurch, which is perceived locally as an existential threat, as the local DBC councillor, I have been working full time for four days per week on publicising this consultation. I certainly have not been able to reach all of my residents. However it is clear that those residents who are aware of this consultation have been alerted of the need to respond and the impact on Northchurch by me. The pamphlet that has been distributed has not reached most people and is insufficiently detailed for the casual reader to note the number of homes planned for Northchurch. For some reason, despite having its own parish council, Northchurch is not referred to by name in the proposals. The brochure, even where it does reach my residents, simply fails to alert them to the significance of the developments, given that all of them are referred to by Berkhamsted notation.

There are clearly residents all over the Borough who have not realised that this consultation is taking place - I doubt many other councillors have put in the effort I have done to alert residents to this.

There is a considerable sense of grievance in the Northchurch community that such extensive development proposed for Northchurch was not brought to the attention of many at all, and when the brochures were received, the detail was such that only the most diligent would spot the extent of development proposed for our parish. This indicates an urgent need for council officers to familiarise themselves with the history, setting and topography of Northchurch before these proposals move forward.

Of the extensive number of Northchurch residents I have consulted, they are unanimous in the view that this consultation should not have taken place during a national Lockdown. They are also baffled as to why a consultation process should be run, when those who are proposing it declare in full council that the plan is not one they believe in or want to execute. This leads residents to be concerned about what the plan that may eventually be implemented will look like, if not the one currently proposed. It is necessary in such circumstances for any reviewed plan to be put out for full public consultation at a future date, when traditional consultation methods in keeping with reasonable expectations of residents can take place. To do otherwise would be irrational as residents have been told that the proposed plan is not the plan that the council hopes to eventually ratify.

* No**QUESTION ANY OTHER COMMENT comment** I tried to submit my response via the portal on the website but was unsuccessful (like many others I have spoken to). I also don't believe the consultation and the consultation period has been fair as I have not received, along with numerous other residents, relevant information packs. I came across information about this consultation only through Facebook (that another villager put up) and I strongly feel something of this importance should have been more widely distributed. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.**Included files**

QUESTION ANY OTHER COMMENT comment	<p>I am gravely concerned by this - as well as the way this consultation has been organised and arranged. This has all been pushed forward during the middle of a pandemic. Are you trying to get it through by hoping no-one is aware it is happening? While people are distracted? While people are struggling with keeping afloat, coping with loved ones dying, having their own battles against long Covid? When they are too preoccupied to have the ability to object properly? The information has not been available in acceptable ways - viewing plans in public spaces has not been possible for totally obvious reasons. You 'kindly' extended the period to submit comments by a massive one month - totally inadequate.</p> <p>So how have we been supposed to view the plans? Online. Again - totally inadequate. A woefully poor 'virtual physical space' to view the plans - this is not acceptable. Firstly - you are assuming everyone in the borough has the ability to view these online. Secondly - you are assuming everyone the plans concern is computer literate, has adequate wifi, etc. The 'virtual physical space' was confusing, hard to follow and again - totally inadequate. Is this really the best you could do to communicate your plans to residents? I am incredibly disappointed in your entire handling of the process from start to finish.</p> <p>You need to withdraw these plans and go back to the drawing board and start again. IMMEDIATELY.</p> <p>I trust my objections will be thoroughly noted - and considered both properly and thoroughly - along with all the other objections.</p>

QUESTION ANY OTHER COMMENT comment	The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an

updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

Life has changed since Covid19 and Brexit and I think that any building plans should take this into account.as people are commuting less and working from home more. I know from both my employer and those of my friends that working from home will be far more common even after lockdown so we should not be thinking of Hemel as a commuter town in the way that it has been in the past. The UK population may have fallen by as much as 1.3 million people as a result of Covid, and this includes a decrease in London of almost 700,000 (from a report by the Economic Statistics Centre of

Excellence, published in January 2021). The pressure on housing in London has long been a driver of increased housing demand in Dacorum, so it stands to reason that a big fall in the population in London will reduce demand in Dacorum, and this is likely to be exacerbated by lower EU immigration following Brexit. Given we have seen such large change over the last two years, it seems foolhardy to use out-of-date models to plan future housing need. Please push for the government to use the most recent ONS data for the calculations.
Please listen to those of us that love our town and our green space and do all you can to fight the government targets. They are not fair and Hemel seems to be taking far more of a hit than other places.

QUESTION ANY OTHER COMMENT comment The plan also fails to take into account the impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which are likely to result in much greater conversion of commercial space (especially office and retail) to residential use. The council should be focussing on brownfield regeneration opportunities to meet housing needs without destroying valuable green belt land.

QUESTION ANY OTHER COMMENT comment I'm sending this email, in regards to the development of Dacorum housing currently in consultation. I have only just been made aware of this - most people I've spoken to also weren't aware, I was shocked to find out the consultation ends today. I never received the booklet that was supposedly delivered to residents

Information on the website and booklets dropped through a few of the residents doors, is not sufficient to inform all residents of Dacorum, especially during these times and urgently needs reconsideration.

QUESTION ANY OTHER COMMENT comment	<p>Firstly, this process has been pushed through at a time when people are unable to fully engage. Whilst asking for opinions, the current situation prevents a certain demographic within our community from being able to engage safely and free from worry. A significant proportion of our community in Northchurch - note Northchurch and not West Berkhamsted - do not have computers and email addresses. Therefore delaying this consultation until such time as the restrictions are fully lifted is the only just course of action.</p>

QUESTION ANY OTHER COMMENT comment	<p>I would also like to highlight that our household has received no formal correspondence from the council on the consultation and have been reliant on social media to alert us to the need to respond and the upcoming deadline. Many of our neighbours are elderly and less likely to be using social media and therefore I am concerned that they will not have had access to the same level of information that we have had. Due to the current lockdown limiting people's movements and ability to interact across households, I think there is a real danger that a number of people's views will not be heard on this important issue.</p> <p>In addition, the portal has proved difficult to navigate and to submit our response, hence doing it in this way. My husband (who has submitted his response separately) works in IT and therefore if we found the website challenging, I suspect we are not alone. Again, I am concerned that others may have been unable to make their response known and may have simply abandoned the process, finding the website obstructive.</p>

QUESTION ANY OTHER COMMENT comment	a) I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown — I am concerned that many residents simply did not know this was going on

(neither of my elderly neighbours were aware until I told them 2 weeks before the consultation end date). Publicity was poorly planned and haphazard — Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT not only felt excluded but realistically were excluded. Sending posted leaflets with cartoon representations of these developments in the days before closing the consultation is risible.

b) Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst homeschooling children as well as dealing with the challenges of CV19 and lockdown. The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation.

c) There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing. The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT. It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown

d) People expect consultations to involve public meetings where officers can explain what is proposed and answer questions — Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".

QUESTION ANY OTHER COMMENT comment	<p>Inadequate consultation – and large numbers completely uninformed</p> <p>My first point is about the process itself. The decision to run a public consultation during a pandemic and over the holiday period was questionable. As people would be home and in lockdown, neither out and about nor interacting with each other, the customary channels for engaging the public were severely diminished. This would include word of mouth, exhibitions and information events at community centres, the free local papers that people would pick up while out, any local groups leafleting householders to lobby them to respond (as this is not allowed). All of these casual ways of raising awareness would not be available at this time of national lockdown in what was a tier 4 area for much of the relevant period. However, having decided nevertheless to go ahead despite these issues, the council should have recognised the importance of getting the information to each and every household. It is therefore all the more surprising that the council only decided as an afterthought to distribute an information leaflet to every household.</p> <p>Along with most of the people in Potten End village, I did not receive that information leaflet. An online poll of the village suggested 81% didn't receive it. Nor did I receive the October 2020 "Dacorum Digest" magazine that had some information about the local plan within it (although notably this was from before the consultation even started). These gaps were never remedied, as very few people would have known to ask for that which they did not know they ought to have received.</p> <p>I believe this has left many parts of the Dacorum population in ignorance of this process, and that the Council has failed in its duty to ensure robust engagement to such an important plan.</p>

QUESTION ANY OTHER COMMENT comment	<p>my garden houses the Bulbourne chalk stream running from The Old Mill - The Bulbourne is threatened by low flows and a recent Environment Agency study has concluded that unsustainable levels of abstraction for public water supply are contributing to low flows, and abstraction reductions have been proposed. In the summer of 2019 one leaking canal lock gate, at Lock 48, at Dudswell wasted 2.7 mega litres a day. That is equivalent to the daily use of water by the whole of Berkhamsted. The Bulbourne water quality is deteriorating, despite attempts at improving it. How will any development on this river - just behind and to the left of my house - help the river and all the natural wildlife surrounding it? I strongly object to any building work that mean the loss of Herons, (seen in garden Jan 2021) Egrets, (seen Jan 2021) foxes, (seen Feb 2021) kingfishers, (seen 2020 July) goldfinches, deer, (seen May 2019 and June 2020) crayfish, (seen every month since I have lived here! 2017-2021) minnows, (seen every month when my daughter plays in the stream 2017-2021) hedgehogs, (seen last Sep 2020 before they hibernate) squirrels (see them every day!) and robins (see them every day) - all to be found in my garden, or in the river that flows through it. Hedgehogs are classified by ICUN as vulnerable to extinction - and sightings of them are rare - this little fellow came right up to our sliding doors! They are protected in the UK under the Wildlife and Countryside Act, 1981; Priority Species under the UK Post-2010 Biodiversity Framework and the IUCN Red List for British Mammals. This sighting is now lodged on the Herts Environmental Records Centre database.</p>

Also we had to pay for a bat specialist to come and ascertain if we had bats living in our garage - they are a protected species and as such I wonder how they will survive if there are hundreds of homes being built on the fields/trees where they live?

As a chalk river, the River Bulbourne is of international significance and it falls into the category of a priority habitat under the Natural Environment & Rural Communities Act 2006 (S41). Many species living in it and along the banks rely on a sustained flow of water which is normal in a natural chalk stream fed partly by underground springs like the Bulbourne. A recent case study by 1S. Wilson provides evidence that the Rivers Bulbourne and Gade no longer behave as chalk streams should. He demonstrates that rapid rise and fall in the water levels are more typical of urban run-off than chalk streams and he observed flooding. Surface water running off hard-standing (roads, paths, rooftops, etc) is rapidly directed via drains into these rivers during periods of medium and high rainfall causing the water levels to quickly rise and fall. What should be clear water often becomes cloudy due to silt, rubbish and pollutants. Progressive silting and growth of vegetation in the water channels reduce the flow of water and increase the risk of flooding. - Will buildings and roads increase the probability of damage to the river ecosystem and some homes being flooded? As these rivers are of global significance, should the Local Plan incorporate measures to restore and protect them? Dacorum Borough Council have a duty to have due regard to the conservation of biodiversity under the Natural Environment and Rural Communities Act 2006 (S40). Those habitats and species which are of principal importance for the conservation of biodiversity in England are listed in Section 41 and include the House Sparrow, Cinnabar Moth and Great Crested Newt. s biodiversity likely to be increased, or diminished at the proposed development sites? What specific biodiversity, green infrastructure or compensating measures do you think should be recognised in the various site plans? Are Local Authority measures in place to ensure that developers adhere to a development plan after Planning Permission is granted and before any long-term biodiversity damage occurs?

I am concerned at the loss of hedgerows and trees - all impacted if these wetlands were built upon. We had our planning permission staunchly objected by the conservationists - and we accordingly built a smaller extension and used natural wood as the house's outer covering. How can you justify therefore building hundreds of houses in the same patch of land? Bank Mill Lane has only a handful of cottages - several listed buildings - and already there are traffic issues with cars overflowing from the Old Mill pub. There have been several near collisions on a road that is only wide enough for one car to drive down - and really should be one way. How will this road and indeed the bridge to Bank Mill sustain more cars and people? I can safely predict there would be deaths if this were to be the case.

Investment funds are being allocated to Hemel Hempstead for transport and amenity requirements associated with expansion of the town. Equivalent financial and infrastructure support is not being given to Berkhamsted and Tring.

I think the number of proposed developments across Dacorum is excessive and question the formula used to calculate it....

I am also concerned about families with sick children or elderly and disabled people trying to get to the Gossom's Road surgery where there is already inadequate parking? Trying to see a doctor prior to the pandemic was a near impossibility - how will the town cope with a huge influx of people, when there are already many elderly people living here who will need access to their local GP? Are we to simply never get to see a doctor as there will not be enough GPs to care for that many people...

I am deeply concerned about the strong Countryside / Green Belt boundary Impact on valley sides and important dry valley location. Also I am worried about the encroachment of the urban area along the valley bottom and adjoining open countryside.
 Also the distance to town centre services and facilities, employment, land and station.
 Finally as I have already stated, the impact on setting of the River Bulbourne Reduction in the degree of separation between the town and Bourne End.

QUESTION ANY OTHER COMMENT comment I also object to the way in which the consultation has been promoted to the public. It's been inadequate - money has been spent producing a 'virtual exhibition' and an animated film but more attention and budget should have been given to response mechanisms. Apparently brochures have been sent out but we haven't received one and the online portal seems specifically designed to put people off responding. It's been difficult to find out that I can simply email a response as I am doing here.

This entire plan and the process of responding is badly done and completely fails the people of Dacorum.

QUESTION ANY OTHER COMMENT comment	<p>I would also like to call into question the validity of the consultation on this matter. It feels like you have taken advantage of the pandemic, knowing that a number of factors will minimise the ability of local people to voice their concerns about the consultation. I think this is shameful and makes me even more passionate on this. Elderly neighbours who I have spoken to, feel deeply saddened by the plans, but feel unable to communicate this with you. They do not have email and internet, and lack confidence in writing to you, so they do not have a voice. Having lived here for decades, these residents' concerns should not be brushed under the carpet, but it feels like these are the people you care least about. You could have had meetings with small numbers of people, or walked around the areas where the elderly live, and asked them to fill in a form, but you have done neither of these.</p> <p>I urge to reconsider the housing development proposed in Northchurch for all these reasons discussed.</p>

QUESTION ANY OTHER COMMENT comment	<ul style="list-style-type: none"> I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown

- I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard — Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT felt excluded.
- Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home- schooling children as well a dealing with the challenges of CV19 and lockdown — The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation — There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing — The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT — It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown — People expect consultations to involve public meetings where officers can explain what is proposed and answer questions — Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".

QUESTION ANY OTHER COMMENT comment	1) I question your timing for this consultation and proposed development. The country is undergoing a dramatic change in response to the effects of the COVID-19 pandemic and Brexit. Social practices and what is demanded in local facilities, our fears and manner of living are all under question. As can be witnessed in our use and need of outside space, the battered state of the high street, will there be travel into London and use of the station or increased engagement with the internet? This extends to the question of what will be necessary in the shape and location of national accommodation which is especially unknown. The changes to living are radical and any new development would need to acknowledge them.

QUESTION ANY OTHER COMMENT comment	I don't believe the consultation has been fair, as numerous residents have not received the information packs that some households have received. I do not receive free local papers, and during the lockdown have not been out to see any information that may have been available (ie library). I know this information has been published on Facebook, but strongly feel something of this importance should have been more widely distributed, after all, note everyone has access to the Internet and with home-schooling, lots of tools/time has been taken up. Therefore I believe that consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment	1 The consultation is taking place during lockdown so that many senior citizens who find using the internet challenging are being denied a voice. Had we not been in lockdown, they would normally be able to see the plans at local exhibitions or view them at the library. It seems morally wrong, in the current situation, not to extend the consultation period.

QUESTION ANY OTHER COMMENT comment	<p>I am writing to object to the Dacorum Local Plan.</p> <p>My primary objection is that the plan is based on outdated data, using ONS data from 2014 rather than the most recent data from 2018. It is inconceivable to me that the Dacorum Borough Council would knowingly and willingly choose to overlook the latest data to formulate plans that will have such a big impact on the future.</p> <p>I have spent 40 years working as a data analyst in the statistical and market research industries, and we would NEVER use outdated data when newer data were available. It comes across as using data to fit the desired outcome, rather than making informed decisions based on relevant data.</p>

QUESTION ANY OTHER COMMENT comment	<p>Inadequate consultation – and large numbers completely uninformed</p> <p>My first point is about the process itself. The decision to run a public consultation during a pandemic and over the holiday period was questionable. As people would be home and in lockdown, neither out and about nor interacting with each other, the customary channels for engaging the public were severely diminished. This would include word of mouth, exhibitions and information events at community centres, the free local papers that people would pick up while out, any local groups flyering householders to lobby them to respond (as this is not allowed). All of these casual ways of raising awareness would not be available at this time of national lockdown in what was a tier 4 area for much of the relevant period. However, having decided nevertheless to go ahead despite these issues, the council should have recognised the importance of getting the information to each and every household. It is therefore all the more surprising that the council only decided as an afterthought to distribute an information leaflet to every household.</p> <p>Along with most of the people in Potten End village, I did not receive that information leaflet. An online poll of the village suggested 81% didn't receive it. Nor did I receive the October 2020 "Dacorum Digest" magazine that had some information about the local plan within it (although notably this was from before the consultation even started). These gaps were never remedied, as very few people would have known to ask for that which they did not know they ought to have received.</p> <p>I believe this has left many parts of the Dacorum population in ignorance of this process, and that the Council has failed in its duty to ensure robust engagement with such an important plan.</p>

QUESTION ANY OTHER COMMENT comment	I wish to register my objection to the draft local plan with the following reasons. 1 Scant awareness of the plan and its impact due to lack of proper consultation and transparency. (I was informed by friends)

- 2 Use of old data (ONS 2014), when new data (ONS 2018) is available and only require about half the amount of houses to be built.
- 3 Lack of infrastructure to sustain such an enormous population increase.
 - water supply and treatment
 - health care
 - education
 - transport
 - employment
- 1 Lack of adherence to Green Belt Rstrictions.

Please consider this for a proper public consultation as Covid restrictions will hopefully soon allow this to happen.

QUESTION ANY OTHER COMMENT comment

This is in response the the Council's request for comments on the strategic plan. My comments are set out below.

I have been resident in Berkhamsted for over 40 years and my children were brought up and educated here. During that time I have lived in a number of different places in the town and have participated in local music and sport and enjoyed the local amenities, shops and facilities. I have tried to support local people elected to represent us because they choose to try to make a difference and to preserve the quality of life we enjoy here. That support can only go so far and the current plan is in my view a fundamental betrayal of the trust local residents have placed in the elected representatives.

QUESTION ANY OTHER COMMENT comment	There has been no wide-spread public consultation. People do not know about this plan and its impact. It seems the Council has chosen to take advantage of the COVID-19 pandemic to push-through this plan rather than postpone and ensure a wider, fuller consultation with the relevant population. Other councils in England have postponed such consultations until things are more 'settled' around the country; it doesn't seem a big thing to ask Dacorum Council to do the same. And, when re-launching the consultation, it is done so with more publicity, consultation, and transparency. Please postpone the consultation and make it a truly public, transparent one.

QUESTION ANY OTHER COMMENT comment

I am responding to the consultation on behalf of myself and the X adults who live with me.

I gave up trying to use the portal as it was impossible to work through all the documentation to answer the questions - why wasn't a simple questionnaire set up, separate from the documentation? This is one of the worst examples of a system set up for the benefit of the people receiving and collating responses rather than making it easy for citizens to reply. This is an unacceptable barrier to responding.

I have lived in Boxmoor for over 23 years, I went to senior school in Warners End and until the pandemic commuted to London daily. I brought up my family here and have loved being close to the town centre, the canal and plenty of green space that sets Hemel aside from many post war developments.

My response lacks detail as there is far too much information to go through on top of an office job, caring for an elderly mother with dementia who has been unable to attend her day centre since April last year, two close relatives suffering from recent and historic trauma, running a small local business that has been busier due to more people working from home during the pandemic, and my role as a local councillor. The consultation is not very accessible or easy to digest on a screen, even for me an IT literate person who has a professional office set up at home, with a large screen/keyboard/mouse etc. For those who only have a tablet or phone it is impossible to engage in any meaningful way with the consultation. I apologise in advance for any typos - I am exhausted from all the extra work I have had to do in the pandemic due to public services being closed for a year and more people in the house and community to look after.

I am educated to MSc level, a formal Senior Civil Servant, and am computer literate - for the avoidance of doubt when reviewing my complaints about how hard you have made it to reply and engage with the process for the citizens of Dacorum.

I urge councillors and officers to take a step back and put themselves in the shoes of residents when designing huge and life-changing consultations. This has not put the council in a good light. Some local councillors have taken to social media to publicise the consultation but there was very little from the council. This consultation should have been postponed or extended to beyond lockdowns and school closures to enable a full and open review and engagement with the whole community.

We support the responses of OneVoice, Chiltern Society and the Liberal Democrat Group, among others, so I will not seek to duplicate their detailed points here, but focus on the main points of concern for a long time resident of Boxmoor, a jewel in Hemel's crown.

Greenfield/greenbelt

The green belt should be protected at all costs, and brownfield sites prioritised over any permanent destruction of greenbelt land. The council has said in public council meetings that they will protect greenbelt to the death but this is not what the consultation says and this is what has enraged so many residents.

Housing requirement and council tactics (Q1)

Too many houses, too few affordable homes.

It is absolutely clear that the number of houses supposedly held to our temples is far far too many on any rationale and evidence-based up to date analysis. The plan is woefully short on ensuring a large proportion of social/affordable housing, which is what residents of Dacorum need. The council has failed its citizens by refusing to face up to the Government and push back on the numbers. To throw the pass to the community in the middle of a pandemic with a consultation that proposes an eye-watering and irrevocable destruction of greenbelt and increase in town sizes of Berkhamsted and Tring is incomprehensible. This is an incredibly risky strategy in the middle of a pandemic when you will not have reached a significant proportion of the community die to pandemic restrictions. There are still more people in Dacorum who don't know about the consultation or its life-changing implications than there are who do know. And of those who do know, how many of them will have the time or energy to reply substantively? Please, on behalf of your residents, fight back at the government figures and listen to us. To ignore any criticism as politically motivated blinds you to listening to what we have to say *as people who live here and will live here, hopefully alongside the next generation, for the rest of our lives - decades* is rude at best and incredibly insulting and not in the interests of what's best for Dacorum at worst. Other councils have fought back, why didn't we? Why didn't you agree the tactics with the residents whose lives will be affected by the new Local Plan?

The evidence base for the number of houses needed in Dacorum should be the 2014 ONS numbers and not 2018.

London Road development

4 storeys max at the station.

Another case of the Council not appearing to listen...in the most recent consultation on the station development, the overwhelming response from residents was to limit any development to 4 storeys to protect the local scenery, including overlooking the ancient grazing land of Boxmoor Trust and the view of Roughdown common and the fields beyond from resident in the heart of Boxmoor village. Why does the current plan say '8 storeys or more'??? What is the point of consultation?

It is clear to anyone who lives in the immediate area or who travels along London Road to and from town and Apsley or the A41 that height is a given at the Plough roundabout and at the scarred land and buildings next to Aldi at the A41 Junction.

There is scope to develop the ugly brownfield sites along London road opposite the moor, eg around the old gas works and near the trainline between the A41 and the roundabout at Roughdown road.

The area between Roughdown Road and the station roundabout must remain low rise to protect the street scene as Hemel moves into more green land towards Box Lane. I will fight any proposal to have higher than 4 storeys along this stretch of road and at the station.

Who are the new homes for?

The original proposals for the station development showed apartments that were clearly for commuters, which would be certain to pull people from London into the areas and with inadequate numbers of affordable properties, would not help local people looking to get onto the property ladder.

Commercial/retail at the station

Lockdown has impacted local businesses heavily and the council should be very cautious about approving retail space at the station that could take business away from Boxmoor village centre or town centre, the latter having taken a huge hit from multiple lockdowns. With the town walkable for the majority of people who would live in starter apartments like those proposed for the station development and regular bus services to town, there is limited rationale to have a supermarket or too many restaurant or food businesses at the station location.

Sustainability/climate change

There is nothing in this plan to reassure me that we would have sufficient water to provide for all of the new homes, nor that the council is acting NOW on the climate emergency they declared. An emergency means taking action immediately and we have seen far too little action and too few ideas in this plan, contradicted by the destruction of the greenbelt etc. The council has also agreed to protect the area's unique chalk streams which are essential to maintaining a balanced ecology. These are at risk now and adding too many more houses will impact them further.

The planned housing should be carbon neutral at worst and negative at best. The plan is woefully unambitious on this.

Infrastructure

The infrastructure plan lacks detail on how the roads and cycle lanes will be built/improved and designed to reduce car use. The council needs to be far more proactive, imaginative and positive about designing for a low carbon future and helping residents live in uncongested places.

In summary

There is insufficient evidence of housing need to support the level of development (Q8). Full exploitation of brownfield sites for the Local Plan is not fully evidenced. So the Plan fails to meet Section 137 of the NPPF, which specifies the exceptional circumstances that need to exist to justify changes to Green Belt boundaries.

PLEASE LISTEN TO US - use the citizen's panel and have one for each area in the plan so we can co-design housing, infrastructure and space together. No one knows the area and its needs better than the people who live here.

There are so many good people who work for the council and have worked so very hard on this plan but this proposal is cloth-eared, unambitious and risks ruining the lives and the enjoyment of Hemel and Dacourm's green spaces forever.

QUESTION ANY OTHER COMMENT comment	<p>1 DBC Vision</p> <p>Dacorum Borough Councillors are voted for by local residents and are trusted to serve in the best interests of those residents. DBC's conduct in writing this Local Plan and then continuing with the consultation period at a time when so many residents will be unable to understand the true impact of this Plan and make their concerns known is despicable. The proposals in the plan, including the development of Green Belt, against previous commitments to protect it, demonstrate a complete lack of respect for the areas they are serving and their local residents. The Plan is based on out of date data with regard to the number of properties needed and shows a complete lack of innovate and sustainable thinking by what are, very obviously, outdated and out-of-touch Councillors.</p> <p>It was interesting to hear, in one of the DBS meetings, Councillors defend their decision to continue with the consultation during the pandemic and ignore the repeated pleas to consider all those residents who would be not have the technical know-how to participate in the consultation because they believed everyone would be able to access the information remotely despite the public witnessing the incompetence of many Councillors attending that meeting to use something as simple as Teams. Having information available in libraries when people are requested to stay at home by the Government and certainly must not travel by public transport as many older residents would have had to do is another example of how wrong DB Councillors have got this.</p>

QUESTION ANY OTHER COMMENT comment	I attended the exhibition in Berkhamsted in 2017 and was able to ask questions at the time. However there was no opportunity to formally follow these up or to get answers in writing. More than three years have passed and with the coronavirus lockdown lasting a year, and as a concerned resident of Dacorum, I have noticed enormous activity in house building both at Bearroc Park in Berkhamsted and Roman Park in Tring. I would like to know if these are part of the Local Plan and when was approval for these sites made public? I am not aware of any further information been circulated during the last year and although a short extension has been granted, I would suggest a much longer extension given the aftermath of the coronavirus pandemic. Surely there is time to assess this. Notwithstanding this, please find below my objections

QUESTION ANY OTHER COMMENT comment	<p>We are writing to express our objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth. The sheer scale of the proposed development will have a devastating effect on the environment and also the shape and nature of our towns.</p> <p>The areas of concern are:</p> <ul style="list-style-type: none"> • Loss of Green belt land within the Chilterns which is an area of Outstanding Natural Beauty • Impact on environment with loss of green space, loss of trees and damage to wildlife habitats • The sheer scale of the proposed development would result in an over-provision of housing and this would have an impact on the infrastructure and local community of our towns • The lack of brownfield regeneration proposals. • Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny. • The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East. <p>Berkhamsted, Tring and surrounding towns and villages enjoy green spaces and this is what makes them attractive to the residents. If this green space is turned into residential areas, we will be nothing more than an extension to London with built up and cramped living. This will change the shape and nature of the towns we love. Green Belt was introduced for a reason... to prevent over-building and protect our green spaces... this must remain.</p>

QUESTION ANY OTHER COMMENT comment	<p>We are writing to express our objection to proposals contained in the Dacorum Borough Council Emerging Strategy for Growth. The sheer scale of the proposed development will have a devastating effect on the environment and also the shape and nature of our towns.</p> <p>The areas of concern are:</p> <ul style="list-style-type: none"> • Loss of Green belt land within the Chilterns which is an area of Outstanding Natural Beauty • Impact on environment with loss of green space, loss of trees and damage to wildlife habitats • The sheer scale of the proposed development would result in an over-provision of housing and this would have an impact on the infrastructure and local community of our towns • The lack of brownfield regeneration proposals. • Over-reliance on growth strategies and partnerships which have not been subject to public consultation and scrutiny. • The Plan is at odds with the recent government desire to address the imbalance of investment between the north and south of England. Post-Covid in particular it is likely that there will be a reduced requirement to live and work in London and the South East. <p>Berkhamsted, Tring and surrounding towns and villages enjoy green spaces and this is what makes them attractive to the residents. If this green space is turned into residential areas, we will be nothing more than an extension to London with built up and cramped living. This will change the shape and nature of the towns we love. Green Belt was introduced for a reason... to prevent over-building and protect our green spaces... this must remain.</p>

QUESTION ANY OTHER COMMENT comment

Please take this email as my formal response to Dacorum's Local Plan (2020-2038) Emerging Strategy for Growth.

I do not agree that 16,000 houses should be in the plan and believe you should be using up to date figures which would halve that number to around 8,000 houses.

The current pandemic has shown how important our local green spaces are and that our green belt land must be protected. I do not believe that inflated housing need is an exceptional circumstance for removing Dacorum's green belt.

Green belt land helps protect the shape, size and character of towns and villages preventing them merging into one another.

This plan underestimates the potential for brownfield regeneration opportunities which have increased due to the pandemic with more people working from home.

The plan does little to address the improvements on infrastructure that will be needed to support 16,000 new houses. We currently have no hospital, functioning police station or sufficient schools & residents parking.

I understand that we don't have enough water to supply all the extra houses. I believe from what I have read that the extra water needed can only be extracted from the chalk aquifer which in turn will damage the borough's chalk rivers which are classified as priority habitats by the Natural Environment & Rural Communities Act 2006.

I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment

We have lived in Tring for 40 years and have seen a lot of residential building projects taking place during this time and understand that all towns must support growth and development in an appropriate way. We cannot see how increasing a small market town like Tring by 55% (2,731 houses are planned) is a balanced proposal.

We only received the brochure for us to review a couple of weeks ago and this is not sufficient time for anyone to really research and reply to this proposal, but we felt that we must say something. Some of our neighbours did not receive a copy of the brochure and so we are concerned that this omission may have occurred elsewhere denying a full and satisfactory number of comments being received to judge what is right for the residents in the surrounding villages/towns.

Also because of the Covid-19 situation, we have been unable to attempt to meet with other concerned local people and have a consultation with yourselves face to face as indeed we have done in the past (Tring relocation of local dump site and also when there were concerns about increase in flights from/to Luton London Airport) and to register our concerns/opinions. We have not been able to meet with residents in the High Street and distribute leaflets about the proposal to ensure that most residents are aware of what is happening.

These are just a couple of concerns that my family has.

However of most concern is the planned erosion of the Green Belt in the Borough and AONB. Surely the Council should be seeking other more suitable areas to build upon before developing homes on Green Belt - the definition of which I state from the Government's document Paragraph 133 which says "the Government attaches great importance to Green Belts. The fundamental aim of Green Belt Policy is to prevent urban sprawl by keeping land PERMANENTLY OPEN; the essential characteristics of GREEN BELTS are their openness and their PERMANENCE". Clearly that means that the DBC are working in complete contradiction to the Government's National Planning Policy Framework specifically in the protection and unnecessary development of GREEN BELT land. Surely this is something that the Council Members must need to address before someone decides to pursue this within a legal framework as environmental groups have done with regards to HS2 and how much money would be wasted with court appeals and legal costs yet achieving nothing for everyone concerned.

Surely it would be worthwhile for a postponement of any planning considerations at the moment (Covid-19 lockdown restrictions) until the parties concerned (various local concerned groups, etc.) can meet and liaise with the DBC planning council and hold a meeting that can be positive for all parties involved.

My family have read the recent Response by the Chiltern Countryside Group and fully support the broader points made by them.

QUESTION ANY OTHER COMMENT comment	<p>SAVE ONE TREE HILL, NORTHCHURCH</p> <p>One Tree Hill is the name that my family and I have used for the proposed development site in Northchurch (or 'West Berkhamsted' as it is referred to in the planning document) for the 40 years that I have lived here. My children love the fields as much as I do and we enjoy looking out at them and watching how they change throughout the year.</p> <p>I would like to lodge my objection to the proposed plans to build on this land.</p> <p>I believe that these proposed developments in Northchurch, as well as obliterating our precious green spaces, which are so important to all of us for our mental and physical wellbeing, will also put extraordinary pressure on the local environment and residents in terms of traffic congestion and access to local services.</p> <p>Northchurch is loved by all of us who live here for its beautiful views, its calm and quiet pace and its village feel and identity. I believe that these plans will unneccsaairly obliterate this for all of the current residents. The plans have failed to even identify Northchurch as its own village.</p> <p>I have only very recently become aware of these plans and am very surprised that today is the final day to respond, especially given that we are all still in a full national lockdown.</p> <p>I would urge the council to delay these plans to allow for proper consideration and feedback from residents.</p> <p>My personal feelings are that insufficient value has been put on this Green Belt land in terms of its impact on the mental and physical wellbeing of the existing residents of Northchurch. The number of houses proposed is not justified by the latest statistics and the needs of the local community should be put above the desire to make money out of destroying this beautiful and historic land.</p>

QUESTION ANY OTHER COMMENT comment	I think it is not at all ideal that we only received documentation posted to us about the local plan, this week. We happened to know about the local plan due to being on social media etc, and being part of our community, but if we hadn't, this would not be enough time to gather views and respond. This information should have been sent to residents much much earlier, especially considering lockdown. As it is, we have spent considerable time researching and responding to this plan, time that we don't really have, as we struggle to home school our children, and work ourselves, during this pandemic.

QUESTION ANY OTHER COMMENT comment	<p>Why do I have to register to make a response ?</p> <p>Is this a bureaucracy wall to prevent comment? Is it comment suppression ?</p> <p>Here are my comments anyway. Please register me and ad my comments to my registration.</p> <p>General comments.</p> <p>Developments like this make the South East ever more overcrowded and unhappy place to live.</p> <p>The government should follow a strategic plan of building new housing and industry in the north.</p> <p>A new town could easily be built in Yorkshire around the east coast main line and MI/A1 near Selby where communications and land are plentiful.</p>

I think it is wrong to try to add so much development on to the town so quickly. Services and transport will inevitably become over stretched and the quality of everything suffers.

There seems to be no measure of the quality of life impact on residents . High densities like these lead to social problems like crime and health problems both physical and mental.

Specific **Comments**

Rather than bolt industrial zones on to urban areas creating a sprawl, site these on existing suitable spaces in the wider countryside such as farm yards and other existing agricultural buildings . Match the rural architectural style and add landscaping.

Relocate the proposed industrial area beside the A41 . A 414 Two Water Road junction . This is on a hill top and will be an eyesore right across the town. Plus these fields are adjacent to the Boxmoor trust SSSI , they are wildlife rich and the development will impact massively on wildlife there. They should remain as managed meadow or incorporated into the Boxmoor Trust land as a Nature reserve zone on the urban edge.

Targets for affordable sustainable low carbon houses to apply to all developments

Consideration to be made to any development to fit in to existing urban scale building height and townscape.

Commit to re wilding of surrounding areas on a scale to the green land lost in order to balance loss of wildlife habitats.

Create targets for tree densities and hedgerow lengths within the Dacorum urban boundaries to protect mental health of Dacorum people and wildlife habitat.

Create a target for a minimum distance to green space from each doorstep. Say 200m

Make a definition of what constitutes green space based on area of land, fraction planted and variety of planting done

QUESTION ANY OTHER COMMENT comment	<p>I write to you regarding the Proposed Development in Long Marston for over 3,000 houses.</p> <p>Have you thought about the local infrastructure? The small country lanes already smothered in pot-holes, large vehicles ruining verges, encroaching on the ditches (to MINIMISE FLOODING), destroying wildlife? What about the farms already there, for hundreds of years, actually sitting on FLOOD PLAINS? What about the schools, the doctors surgery's, the already at capacity local hospitals and tiny train stations barely able to meet current capacity? The list could go on, but I am aware we are VERY SHORT OF TIME.</p> <p>Quite frankly this is ridiculous and has not been diligently thought through. As for the timeframe of LESS THAN A WEEK for objections to be raised and informing the landowners; it is an utter disgrace. You may have pressures from higher powers but seriously, have you not thought beyond that? You clearly have no heart for the people you are supposed to look over. Livelihoods will be lost, generations of farming destroyed, wildlife killed, local workforce's crippled, current locals needs disregarded, all for you to 'meet targets'. Good luck when the rain comes is all I can add. We live on clay!</p> <p>I urge you to reconsider your planning and your ultimatum timeframe. Have a heart.</p>

QUESTION ANY OTHER COMMENT comment	Additionally I believe that the dissemination of information about the Plan around the residents of Berkhamsted has been sketchy to say the least. I am aware of many people who know nothing about it and do not believe that every household has been properly contacted with information.

Finally I would also like to say I am disappointed that our local MP, Gagan Mohindra, is remaining silent on the matter, and will be forwarding this email to him. The fact that developers, who stand to gain much from implementing the Plan, have been making sizeable donations to the Conservative Party is not a good enough reason for him not to represent the views of his constituents

QUESTION ANY OTHER COMMENT comment	I do not think this plan consultation has been widely publicised as we have had no letters as residents to say what is happening for the village and we do not receive a free local paper in the village either and with reluctant to go to the local shops to buy papers due to the covid situation. I have not been out unless it is really necessary to protect myself and family. This information should have been addressed in a different way; due to the situation we have all been living under for a year now. Has there been a consultation meeting with in the village? I learnt about the plans from social media this weekend and not everyone has access to this media either. especially the older generation.

QUESTION ANY OTHER COMMENT comment	<p>I would like to express my concerns with regard to the Local Plan and the consultation. First of all in this current period of crisis I think it would have been sensible to have extended the consultation period beyond the revised end date of 28 February.</p> <p>I am also concerned that, whilst numerous methods seem to have been used to disseminate information, the brochure clearly detailing all the areas of proposed building was not sent out to residents until the last week of February.</p> <p>We have been made to realise during the last year the vital importance of our local open spaces and the protection which needs to be maintained of our Green Belt and areas of outstanding natural beauty. Once these are lost they can never be recovered and are more and more essential to maintain and protect in our overcrowded island. I understand that local</p>

authorities have the flexibility to restrict the scale of development when impacts on Green Belt etc are taken into consideration. Surely another impact of the current crisis is a chance to re-think and reuse current office and brownfield sites before destroying further open or agricultural land.

Current environmental and infrastructure impacts should weigh heavily in all the planning decisions. The plans need to look carefully not only at the impact on roads, power, support agencies, water extraction and disposal etc but the wider requirements of such areas as climate change obligations.

I trust that this consultation is a realistic opportunity for concerned residents to express their opinions and that the ideas and thoughts of local people will be taken into account.

QUESTION ANY OTHER COMMENT comment Although a resident of HP4 for 16 years I have struggled to find out the benefits of the new local plan or indeed anything about it. I have however been bombarded with communications from a Developer who wants to build over the farm at Bourne End. I have several points to raise about this:

1/. If a Developer who is from outside the area can manage to find addresses for residents - why can the people who collect a goodly amount of Council Tax from each and every address not manage this?

2/. The Developer's plans seem questionable to say the least. The number of houses and the Sports facilities, Primary School and local infrastructure are unlikely to fit comfortably onto the space earmarked. I am also concerned that they do not have a track record of delivering this scale of project. Their corporate website "Thakeham" (as opposed to the glittery micro site Bulbournecross) shows only modest sized developments and there is no evidence of local infrastructure being provided.

3/. The Houses the developer is used to providing are £500,000 plus. We have no shortage of these in the Borough. They cannot be considered as contributing to " Social Housing" or homes for vital key workers.

The portal for consultation if not fit for purpose. I tried many variations of my name and it kept saying username already taken. Why could the normal log in for comments on Planning Applications be used - are you trying to limit the number of people who comment?

I for one would have like to see a proper consultation period - and yes if it has to be lengthened by a few weeks because of the Pandemic then so be. AND please TELL people what is going proposed.

QUESTION ANY OTHER COMMENT comment	<p>The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).</p>

QUESTION ANY OTHER COMMENT comment

This is the most important decision for the community in a long time. Two clear issues which mean we must consider deferring this decision for at least 2 years:

- We are in a pandemic and the community and local businesses are already reeling from material personnel and financial challenges. It is simply not the right time for the community to have the time to make a decision that will impact everybody - how will a Nurse on the front line be able to respond to this now - is it fair they can't have a say?
- There is a housing challenge in the UK but right now it is unclear where the housing is needed post the pandemic. The data from 2018 already shows that there is no requirement for the level of housing So again not the right time to start destroying the Green Belt.

QUESTION ANY OTHER COMMENT comment	<p>I appreciate that the consultation period was extended, but the methods available for people to view, learn about, scrutinise, debate, and comment on this expansive local plan are simply not good enough. I am 31 years old, and I have found it very difficult to find the local plan, the right documents, navigate the website, and then finally leave comments (hence I have used this form and am emailing you). The lack of communications about the plan, and the lack of public meetings, will leave thousands of effected residents without a voice and without a change to participate. Whether you're for or against the plan, this is totally unacceptable and provides a very weak foundation for the process to continue.</p> <p>Having lived in Dacorum for nearly 4 years, I have always been a vocal supporter of the council – having found it to generally be effective. I feel particularly let down and angry with the nature of this consultation, as well as its proposals to destroy precious Green Belt land, which we will never, ever get back. Both of these things are really not acceptable, and I urge the council and those in positions of influence to stand up for the right thing. Then you will have the people behind you, and we will be able to achieve great things.</p>

QUESTION ANY OTHER COMMENT comment	The pandemic has meant that normal methods of consultation could not take place. The measure put in place have gone some way to allowing engagement, but it has not been good enough by a long stretch. I am in my 30s, I am fully computer literate, and I found it very difficult to a) find the local plan, b) review the different sections, and c) leave comments (hence

I am using this form). I have no doubt that these methods, and the poor execution/lack of communication strategy, will mean that a significant proportion of residents will not be able to make their voices heard. This is totally unacceptable. The consultation should have been post-poned until restrictions allowed for public meetings to be held. This smacks of cowardice on behalf of the planners/councillors proposing this plan, and it shan't be forgotten or forgiven quickly.

QUESTION ANY OTHER COMMENT comment I don't believe the consultation has been fair or inclusive under the Equality Act 2010 as I have not received, along with numerous other residents, the information packs some households have received. Luckily, family members have access to the internet and saw this information on Facebook but I strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet or the technical knowledge. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment	Lack of Proper Consultation I have only heard of this "Consultation" via another Potten End resident. As the proposals will severely impact Potten End, I can only assume that you do not wish to consult the public, especially those to be adversely affected. We have not received any communication from the Council about this Plan and I can only conclude that it is so harmful to the environment, countryside, wildlife and quality of life for people that you want to sneak it through whilst we are all in lockdown.

QUESTION ANY OTHER COMMENT comment	I support everything said by the One Voice Alliance. I consider that there should be a moratorium on any further significant in housebuilding until the Borough has a healthcare system that is at least on a par with the national average and can then accommodate an increase in the population, and until there is a proper sustainable water and sewerage infrastructure that does not involve the desiccation of the local chalk streams and a cessation of our water supply in the summer months.

QUESTION ANY OTHER COMMENT comment	- The way in which this consultation has taken place has not made it easy for people to respond and to communicate their views, partly due to the timing of it taking place during the national lockdown and also due to the website making it very inaccessible and complicated to respond online (I registered an account but despite several attempts encountered problems with trying to add comments, hence why I gave up and resorted to emailing directly instead).

QUESTION ANY OTHER COMMENT comment	<p>I am writing rather lately to request that you severely delay your attempt to make any decision to put through the outlined plans to in my opinion severely damage the whole of the Dacorum area.</p> <p>Firstly I suggest you spend your time in working on how to help the local area recover from the Covid disaster and I would have thought this would utilise all the resources you have available.</p> <p>From talking to local people by phone I get the impression that few people have any idea of these proposed plans as they have both had more pressing matters of survival on their minds and no chance to meet up and discuss the matter with others. It should be necessary to wait until meetings can be called to discuss this matter which really will probably be 2022 at the earliest. This I believe should be done before any more public resources are wasted.</p> <p>Sorry so brief but will write in more detail later however I do want to register my opposition to this plan going forward until more notice and discussion has been arranged.</p>

QUESTION ANY OTHER COMMENT comment	<p>Hello, I have just been made aware through Facebook friends of the consultation for the local plan. I am very concern that I have not received information about this from the council directly given the level of impact it will have on my local community and local area.</p> <p>I feel that the consultation period should be extend to a point when fair and transparent communication can be supported outside of covid conditions when all people can access the information and also have time to consider and respond. Covid condition mean that we are reliant on digital to communicate and now all people have access or easy access. There is also fair time considerations; for those who are juggling fulltime work and full-time childcare there is very little capacity to consider and respond to consultation on top of managing basic family responsibilities.</p> <p>I look forward to hearing your view on what steps you have taken to address these factors and hope you reconsider and further extend the consultation period.</p>

QUESTION ANY OTHER COMMENT comment

Q9 Additional

- I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown
- I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard
- Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT felt excluded.
- Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home schooling children as well a dealing with the challenges of CV19 and lockdown
- The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation
- There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing
- The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT
- It was not possible for councilors or their teams to knock on doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown
- People expect consultations to involve public meetings where officers can explain what is proposed and answer questions
- Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".

QUESTION ANY OTHER COMMENT comment

I am writing to express my views on the Dacorum Local plan proposals as a resident of Berkhamsted.

Timing

The timing of this consultation is wholly inappropriate whilst we are in the midst of a global pandemic which is likely to have a profound effect on the way in which we live, work, shop over the coming years and therefore it is extremely difficult at this present time to predict the requirements for the next year, let alone decade. This consultation should be paused for a period of at least 6-12 months, by which time it may be more feasible to predict future population trends, working habits, living and social requirements. Furthermore we are due to have a new census conducted this year and therefore it would make much more sense to conduct the consultation using the most relevant data from post Covid 19.

QUESTION ANY OTHER COMMENT comment	Finally we feel that many of the residents of Northchurch who will be affected by this proposal are not aware of the Plan. Due to lockdown any public noticeboards will probably not have been read and no communications have been posted to many residents, including us. We have just spoken to a resident of Darrs Lane, at 5.00pm today, and they have said that they received a brochure yesterday saying that they need to respond by this Sunday. We request that the period for consultation be extended.

QUESTION ANY OTHER COMMENT comment I don't believe the consultation has been fair, as numerous residents have not received the information packs that some households have received. I do not receive free local papers, and during the lockdown have not been out to see any information that may have been available (ie library). I know this information has been published on Facebook, but strongly feel something of this importance should have been more widely distributed, after all, note everyone has access to the Internet and with home-schooling, lots of tools/time has been taken up. Therefore I believe that consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment	Holding consultation on so large a plan during lockdown denies the opportunity for community appraisals and meetings regarding the future development. This consultation period should be extended until proper community meetings can be held and plans and detailed models viewed. The maps sent out in the consultation pamphlet are deliberately lacking in detail and simplified almost beyond recognition. Each area's development isolated from the other so that the grand scale of over-development is hidden. This is undemocratic. You have been elected to represent us, not to disenfranchise us. There are many other issues to be addressed including environmental concerns. More OPEN consultation and time is needed.

QUESTION ANY OTHER COMMENT comment	<p>I have only this evening been made aware of a Draft Local Plan which relates to the building of many thousands of homes on hundreds of hectares of Green Belt land in Dacorum BC. I have never received or seen sight of the above Local Plan and I assume there may be many other such residents. How was the Plan distributed and/or publicised?</p> <p>In addition, I understand that I have until 11.59pm today to make my voice heard before the consultation closes, a difficult task without sight of said Plan. I find it disingenuous of the Council to set a deadline for this consultation in such unprecedented times we find ourselves in, namely in the depth of a pandemic and substantial lockdown.</p>

I would urge the Council to give all local residents access to this Plan so that they can add their opinions to this important consultation, the outcome of which is of vital importance to us all.

QUESTION ANY OTHER COMMENT comment	<p><u>Summary</u></p> <p>In summary I would like to see the Council, scrap the irresponsible existing plan and rework it based on latest ONS data, with a focus on protecting green belt and developing brown field sites instead. This would create a more realistic and productive plan that would not strain resource in the local area, immeasurably impacting the character of the towns of Berkhamsted and Tring's green borders and gateways. This would also allow some time in the future a proper public consultation when all members of the community regardless of access and knowledge of technology to review, understand the plans and respond fairly.</p> <p>I would also like to bring to your attention how poorly these plans have been advertised and how impenetrable the process of placing objections to the development has been. In my opinion this has prevented hundreds if not thousands of residents right to oppose and have their say, which is inexcusable. I know several people personally who have been unable to meet this deadline due to difficulty in navigating through the information provided and the objection process in general, which frankly is infuriating.</p>

QUESTION ANY OTHER COMMENT comment

First of all, I would like to state that the Officers who have put together this plan, have been exceptionally dedicated, and the 4 main documents of the plan, which are extremely detailed and extensive, reflect this hard work. The individual policies are clear, although the accessibility of the plan as a whole, and the consultation portal in particular could be improved.

Putting together a Local Plan for an area with the complexities of Dacorum, for a period of 18 years, and with an excessive housing target figure from MHCLG is a mammoth task, and the difficulties of bringing together all stakeholder and conflicting needs cannot be overestimated. The sudden onset of the pandemic, the likes of which have not been seen in living memory, can only have added to these difficulties, and I commend the Strategic Planning team for their perseverance in bringing this together despite these challenges.

QUESTION ANY OTHER COMMENT comment	We are writing to express concern regarding the proposed development plan for Hemel Hempstead and surrounding areas. In particular our attention is drawn to the number of houses to be built, and the fact that this is proposed on greenbelt land. We don't feel that we have had enough time / opportunity / information (especially given the current covid situation) to properly digest what is being proposed and the implications for our community's future. We believe more consultation with the public is required at a time when people are able to safely participate in a public forum and have the capacity to do so.

QUESTION ANY OTHER COMMENT comment	I also believe that to have such an important consultation during the pandemic, has limited responses. Some of the local community are not aware of the plans and some have been unable to participate, if they do not have the technical awareness to do this online. It would be fairer to extend the consultation so that there could be a chance for everyone to view the plans in person.

The pandemic has had a serious impact on our local community and local businesses, as well as changing the world in ways we never believed possible. Now is not the time to make decisions that will seriously impact our future communities, when we do not know how, and how soon, our local area will recover.

QUESTION ANY OTHER COMMENT comment

2.Legitimacy of the consultation

The entire project has been deliberately inaccessible to the community that it will affect. Vast numbers of people I have personally consulted with in the area have had absolutely no idea about the proposed plan. There has been a distinct lack of awareness created. I only received the printed plan through the door on Friday 26th February – giving me 2 days to process the information! Consultation has only been possible for those with online capabilities and a large number of elderly and vulnerable do not even know about the project, let alone have the capacity to make comment on it. In no way can their lack of comment be deemed as an acceptance or endorsement of the plans, in fact it reflects their total unawareness of it.

As a minimum, the consultation period should be extended beyond lockdown and when a majority of the area has received it vaccines, to allow the public the chance to view plans, in a way that is accessible to all, and to have a realistic opportunity and timescale to make comment on the proposed plans.

QUESTION ANY OTHER COMMENT comment	<p>I have tried commenting using the portal but have found the process far too convoluted and so have resorted to sending this email response to the Dacorum Local Plan.</p> <p>Firstly, holding a consultation during a pandemic, and in fact during a lockdown, is not a proper consultation. Residents are more concerned with whether they still have a job when furlough ends, will they still have a business when lockdown ends, trying to homeschool and work at the same time or worrying about relatives in care homes. Those with little knowledge or access to the internet will only be aware of the plan if they received a leaflet through the post. The leaflet</p>

was so top-level in information that without access to the internet they would be oblivious to the true implications for their particular area.

QUESTION ANY OTHER COMMENT comment Quite apart from the detail of the proposals, I believe that the consultation process has been entirely inadequate and a dereliction of the Borough Council's duty to its citizens. Information about the plans in Berkhamsted has been poorly distributed, with several streets not receiving the information either at all or not in good time. Additionally, the closure of the library and the inability to hold the usual information exhibitions means that many local people did not know about the plan, could not easily access the required information or get any answers to any of their questions. Finally, any resident without access to internet has had great difficulty in participating in this process. I strongly believe that Dacorum Borough Council should have, like many other councils, postponed the consultation process until after the lifting of lockdown, so that access to information was at the necessary level. Given the severity of the impact of these proposals on the quality of life in Berkhamsted, I think this is shocking behaviour on the Borough council's part, and renders the consultation invalid.

QUESTION ANY OTHER COMMENT comment	This consultation has taken place whilst COVID 19 restrictions have been in place and many people have not been aware of it or able to respond it is totally unfair. I along with many others never received information regarding these plans by post or email and they should at least be put on hold and reviewed due to the volume of housing proposed.

QUESTION ANY OTHER COMMENT comment	I can't believe that you are using housing projections from 2014; the economy and people's lifestyles have changed so much since then. I work for a marketing agency. Since lockdown, we have all worked from home and the owner of my company says that this is the way we will operate after lockdown finishes. Lots of my friends are working from home and do not want to travel into London every day again. I read all the time about big companies either closing their offices or relocating up north where rents are much cheaper. So, there is far less need for houses within commuting distance of London. You are destroying the Green Belt in Dacorum to build houses that are no longer needed.

QUESTION ANY OTHER COMMENT comment	I am 27 years old and live with my parents. I would love to buy a house here, but house prices are out of my reach. Your plans do not cater for me only for very rich people from outside Dacorum. They seem designed to make a fortune for property developers at the expense of people who live here.

QUESTION ANY OTHER COMMENT comment	<p>I am writing to strongly object to the current Dacorum Draft Housing Plan which is ending its consultation period tomorrow. I have submitted a response to the plan through the portal but found it very difficult to navigate. I consider myself reasonably computer literate but in order to submit any comments had to declare myself an organisation and then create myself as a consultee to myself! I am not sure if this was the correct method and did not want my input disregarded if I have submitted it incorrectly. Hence I am also writing an email to ensure my views are considered.</p> <p>Incidentally I believe the fact that this consultation has been concluded during lockdown, is a disgrace. Many of the local population have been disenfranchised by not being sufficiently computer literate, being too busy with homeschooling and working, or just not being aware of the deadline. The plan aspires to get neighbourhood buy in - this is a poor start.</p> <p>If this housing plan is not revised to halve the housing projections before going to the national government then we will be forced to take more than our fair share of home county housing growth. I call on you to protect the beautiful green belt in your borough and look forward to hearing from you</p>

QUESTION ANY OTHER COMMENT comment	<p>Firstly I object to the fact that the consultation has taken place during a pandemic and that the closing date for comments is during a national lockdown. This will inevitably mean that many people will have been prevented from commenting because they are either unaware of the plan, or cannot access the material which is only available online. This will particularly discriminate against the older population and there is a danger that their views will not be heard.</p> <p>The way the online commenting system has been set up is also, in my view, going to result in fewer responses as it is extremely time consuming to navigate all the documents and the content is high on top level wordy statements and very low on actual detail. With many people struggling to find time to juggle work and home-schooling, the length of time</p>

required to respond to this consultation will prevent many from commenting. This does not mean however that they agree with the plan.

QUESTION ANY OTHER COMMENT comment	<p>Lack of Proper Consultation</p> <p>To begin with I want to protest at the way this consultation has been conducted. For implications as significant and long-lasting, there should be public displays, models, presentations, debates and opportunities to discuss face-to-face with planning officers all the various aspects of this Plan.</p> <p>No doubt the pandemic is cited as the excuse of not doing so but it is not good enough. With vaccinations proceeding apace, it will only be a matter of weeks before it would be perfectly safe to hold such events.</p> <p>A delay that is but a blink of an eye compared to the enduring damage that the misguided aspects of this Plan will inflict upon us.</p> <p>I cannot understand how those in charge of this timetable can believe that true democracy is being served by pressing ahead with a process in a way which could be construed as avoiding public scrutiny and furthering interests other than those of the residents that the Council exists to serve.</p>

QUESTION ANY OTHER COMMENT comment	I support everything said by the One Voice Alliance.

I consider that there should be a moratorium on any further significant in housebuilding until the Borough has a healthcare system that is at least on a par with the national average and can then accommodate an increase in the population, and until there is a proper sustainable water and sewerage infrastructure that does not involve the desiccation of the local chalk streams and a cessation of our water supply in the summer months.

I urge you to revisit the many aspects of your current Plan mentioned above and NOT to rush to unsustainable development to the long-term detriment of the environment and its citizens who, ultimately, are supposed to be the beneficiaries of such a Plan and also the paymasters.

It is OUR agenda that should be the driving force: us and our successors.

QUESTION ANY OTHER COMMENT comment	I have been surprised how many residents are unaware of the proposals. In the current climate communication has been more limited and with the process of speaking up and responding seeming daunting to many, I fear the level of response you receive will be only the tip of the iceberg of people's opposition. It cannot be assumed that those you do not hear from are in support of the developments. I urge you to reconsider the numbers and the proposed sites before our way of life and our countryside is irrevocably damaged.

QUESTION ANY OTHER COMMENT comment	I would also like to say that the process of responding to the consultation online was not straightforward and took over three hours of my time to navigate and respond, at a time when I am already stretched trying to juggle my work and home schooling my children, alongside the other pressures of lockdown. I made this time because I have such strong objections to this, but many other people may not have been able to find this time and therefore the timing of this consultation is very misjudged and will not give you a fair representation of the views of local people. I would strongly urge you to increase the timescales for this consultation, otherwise I don't think that you can honestly say that you have given local communities a fair opportunity to comment and engage in these proposals.

QUESTION ANY OTHER COMMENT comment	The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

— I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown

— I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard

— Of the small proportion of residents who did get the brochure - many believed they had no way of responding as it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without internet access felt excluded.

— Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst homeschooling children as well as dealing with the challenges of CV19 and lockdown

— The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation

— There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing

— The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT

— It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown

— People expect consultations to involve public meetings where officers can explain what is proposed and answer questions

— Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".

In summary this feels like a proposal that takes no consideration to the real needs and concerns of the population the DBC claims to represent.

Everyone of those people who vote for those Council members who have had a hand in this are being ignored for a chance to make vast amounts of money for developers and themselves.

It is a truly shameful, poorly conceived plan but pushing it through deliberately at the height of a pandemic in its third lockdown is disgustingly craven and disrespectful to those members of the community who have lost loved ones. I thoroughly reject this proposal and the actions of those who have proposed it!!

QUESTION ANY OTHER COMMENT comment	<p>The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).</p>

QUESTION ANY OTHER COMMENT comment	<p>Unfortunately at Wednesday night's Dacorum council meeting the motion to extend the Local Plan consultation period to take account of the ongoing Covid restrictions was rejected, seemingly along party lines for: 20, against: 27.</p> <p>The council is seeking to railroad this developer's charter through. The appalling lack of an evidential base and forward planning to account for even the basic elements of public infrastructure means the council needs the public's help more than ever. It needs to formulate a creditable plan and do some proper consultation and research.</p> <p>The 'winner takes all' approach has got to stop, and a collaborative approach is desperately needed for the good of the region.</p>

QUESTION ANY OTHER COMMENT comment

Why on earth are DBC and the government pushing through this consultation when we are in a time of such huge change. Brownfield sites have become available which could be used for housing and there seems a pressure to speed through an incorrect process with **INCORRECT NUMBERS OF NEEDED HOUSING** in the borough.

By contrast, in October 2020, Buckinghamshire Council withdrew the Chiltern and South Bucks local plan in part due to Covid-19, noting that a revised plan would be drawn up to "*reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law*".

(<https://buckinghamshire.moderngov.co.uk/ieListDocuments.aspx?CId=336&MId=16533&Ver=4>, agenda item 7). DBC's decision to push ahead with a draft plan in circumstances where, as the government has stated "*the way that the country lives, works and travels continues to change more rapidly than at any time since the war*", appears misguided, both from the perspective of ensuring that a proper consultation takes place, and from the perspective of the need to address the changes wrought on residents' way of life, and consequentially our planning needs, by the pandemic. ('*Government response to the local housing need proposals in "Changes to the current planning system"*', December 2020 (announcing decisions following planning consultation launched in August 2020) (Government December 2020 housing need consultation outcome)

<https://www.gov.uk/government/consultations/changes-to-the-current-planning-system-to-respond-to-the-local-housing-need-proposals-in-changes-to-the-current-planning-system>) As the government notes, "*This has implications, for example, on demand for commercial and retail floorspace in our cities and urban areas. We want our towns and cities to emerge from the pandemic renewed and strengthened – more beautiful, more healthy, more environmentally sustainable and more neighbourly places, with greater public and private investment in urban housing and regeneration*". (Government December 2020 housing need consultation outcome.)

The development around Berkhamsted will disproportionately impact on the village of Northchurch. Northchurch is a separate village to the town of Berkhamsted with its own Parish Council and a small historic centre. That fact is scarcely acknowledged by the draft Local Plan simply treats Northchurch and the sites within it (including Bk06 and Bk07) as an extension of Berkhamsted, newly billed "*West Berkhamsted*" (Dacorum Emerging Strategy for Growth (2020 - 2038), p.230. By contrast, the Local Plan treats locations such as Markyate, Bovington and King's Langley as villages where concerns around sustainability, congestion and the restricted range of services and facilities mean that development should be limited. (E.g. pp.66, 247.). At present, Northchurch is known to suffer from air quality problems, and has a declared Air Quality Management Area (AQMA) in the High Street, signifying that national air quality objectives are unlikely to be achieved. Adding extra traffic burdens to the village (which also has no excess parking capacity) will reverse the recent small improvements in the air quality recorded at that location (Appendices to Interim Sustainability Appraisal Report, p.22: it is noted that there is only one 'normal' year (2019) of data in which the air quality at the location improved. Although DBC reported that NO2 concentrations remained below intervention limits in 2020, the periods of lockdown are likely to mean that the year is not representative.)

Like Berkhamsted generally, it also suffers from a lack of open space within the town. (Berkhamsted (including Northchurch) has the second lowest level of current provision in the borough. DBC Open Space Study Assessment Report, July 2019, Table 6.1 (p.31),

https://www.dacorum.gov.uk/docs/default-source/strategic-planning/open-space-study-assessment-report-july-2019.pdf?sfvrsn=f6e0c9e_4.

) In those circumstances, the public rights of way into the Green Belt countryside around Northchurch (such as that which runs off Bell Lane through site Bk06 - known by local residents as the 'Wishing Tree field' - see further below) are

extremely valuable. The sudden decision by DBC in early 2020 to close all pedestrian access from South West Berkhamsted across the A41 has made such space still more important. While it is proposed that certain sites within the draft Local Plan (including Bk06) should include new public spaces within them, that is far inferior to the ability to gain direct access to the open countryside of the Green Belt. These proposed green spaces, which will inevitably be small, are a poor substitute for open country.

QUESTION ANY OTHER COMMENT comment

a) the lack of transparency and inadequate presentation of the plans during a pandemic when opportunities for scrutiny and discussion are limited.

This plan requires full scrutiny and discussion by the local community. At the moment, this is impossible because of the restrictions necessary due to the Covid pandemic. The Council's online presentation of its plan is woefully inadequate to the point of seeming deliberately obfuscating. The maps of areas where development is planned are lacking labels and scale, for example, and are incredibly difficult to interpret. The links on the site to enable viewers to access "What People Say" do not work. The whole presentation, with its assertions of environmental sustainability and economic prosperity for all (but no clear route to how this is achieved), is a prime example jargon-riddled boosterism. It lacks any serious consideration of how the needs of the world and this locality in particular may have shifted fundamentally in a new era of heightened environmental concern and post-pandemic economic restructuring.

For the Council to pursue this plan recklessly and without further full consultation would be a gross infringement of local democracy and our rights of participation in decision making.

QUESTION ANY OTHER COMMENT comment	Firstly I would like to object to your timing for these planning proposals during this current pandemic. It is extremely problematic to travel to view sites plans and attend meeting in these extraordinary living conditions due to covid pandemic and restrictions. This will have greatly affected the way people can be contacted and difficulty especially for the elderly who are shielding and many who are not familiar with using a computer and are therefore unaware of these new planning developments. I feel that this is a crafty manoeuvre by Dacorum Borough Council! to pass this with little protest.

QUESTION ANY OTHER COMMENT comment	<p>I am writing to strongly object to the current Dacorum Draft Housing Plan which is ending its consultation period tomorrow. I have submitted a response to the plan through the portal but found it very difficult to navigate. I consider myself reasonably computer literate but in order to submit any comments had to declare myself an organisation and then create myself as a consultee to myself! I am not sure if this was the correct method and did not want my input disregarded if I have submitted it incorrectly. Hence I am also writing an email to ensure my views are considered.</p> <p>Incidentally I believe the fact that this consultation has been concluded during lockdown, is a disgrace. Many of the local population have been disenfranchised by not being sufficiently computer literate, being too busy with homeschooling and working, or just not being aware of the deadline. The plan aspires to get neighbourhood buy in - this is a poor start.</p> <p>If this housing plan is not revised to halve the housing projections before going to the national government then we will be forced to take more than our fair share of home county housing growth. I call on you to protect the beautiful green belt in your borough and look forward to hearing from you</p>

QUESTION ANY OTHER COMMENT comment	<ol style="list-style-type: none"> 1 I have only recently heard about this consultation and it feels very rushed. Why would you rush something as important as this? Speaking to other people locally, they have only recently heard about it too. For a genuine consultation, you want as much consultation as possible. If you do not want a genuine consultation, but would rather hush / rush something through, then this is a problem, given staff and counsellors at Dacorum Council are there to serve residents. 2 The middle of a global pandemic and lockdown, with the challenges around communication and on many peoples time, both working and home schooling, is not going to get the best from people, including in terms of attention, understanding, facilitating debate and giving concerned parties the opportunity to explain their perspectives. The consultation on the web was difficult to find, is not user friendly and I do not have time to go through so many different sections at such late notice. 3 Whilst we have seen an appetite from national government to rush things through, not listen to experts and avoid explanation, debate and scrutiny, that same approach cannot be adopted to local government and there is a danger that this looks like it may be the attempt.

QUESTION ANY OTHER COMMENT comment	<p>I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.</p> <p>I would further add that these plans in content and in terms of the process being followed are insensitive to the unique situation the borough's residents are in - green spaces have NEVER been more vital to the social and mental wellbeing of the people of the borough than they have been this past year. This Plan attacks that which has acted as the sole respite for many people struggling with the isolation and mental devastation of this past year.</p>

QUESTION ANY OTHER COMMENT comment	<p>I would like to ask where has DBC publicised this consultation?</p> <p>I believe A public consultation can only be held if the public are :</p> <p>1) Aware it is taking place.</p> <p>2)The local plan is accessible to view by ALL.</p> <p>As a local resident (born & bread in Berkhamsted) I have not received any leaflets/ literature from Dacorum Borough Council re The Local Plan and Consultation.</p> <p>That they have been holding during a National Lockdown.</p> <p>I was made aware of it by The Liberal Democrat Party.</p> <p>I feel this is a disgraceful abuse of the Current Global Pandemic by DBC.</p> <p>DBC leaders are well aware of the Governments laws/restrictions and advice we are All being told we must follow.</p> <p>We are currently in the third National lockdown.</p> <p>It is law to stay at home other than for essential shopping,medical appointments ,work if you can't work from home.</p> <p>Can DBC kindly tell me where in the lockdown rules it deems it essential to leave home risking your health and the NHS to go to the library to view your local governments Local Plan?</p> <p>Please see Berkhamsted's Library's own lockdown literature re booking & quarantine rules.</p> <p>Dacorum Borough Council should have foreseen holding the Consultation during a Global Pandemic ,during a National lockdown would be excluding all those that are already disadvantaged (the poor and the elderly)by not having access or use of the internet,to express their views and take part in a consultation that affects them and shapes the towns they live in,many grew up in.</p> <p>DBC should have postponed the consultation until we are out of lockdown and it was legal and safe for all to view the local plan.</p>

DBC a should have postponed the consultation until Berkhamsted town hall was allowed to open & could safely display the local plan.

I ask that DBC admit you have not given the residents of the borough who you are elected to represent any fair chance to consult on the local plan or have their views heard.

QUESTION ANY OTHER COMMENT comment

I cannot navigate your website. It is not well designed. Please find my feedback below - which is submitted BEFORE the deadline.

I understand that growth is inevitable, but it MUST be done WELL:

If you develop Lock Field, Northchurch then I have the following comments:

- You MUST also develop NEW ROAD. This pathway is already NOT SAFE. My children have to walk along it to go to their school (St Marys CofE) and I often get hit by van side mirrors as they pass. Imagine if that was a child!!!! The pathway needs to be widened, even at the cost of vehicles. Our children's safety is paramount!
- You MUST develop the bridge on New Road. It is a single track bridge over the canal. Yes it is beautiful to look at. But it is not SAFE, especially for our children. There is no safe way to cross the road from the path to the canal path. This bridge must be developed into something that is safe for our children to walk across and over. Especially as there is a school next to it.
- The canal path must be upgraded. It gets so muddy in the winter. It must be pathed or concreted in order to sustain the proposed increased foot-fall.
- I don't think that one road access to a residential area is wise. I think two ways in and out is safer.

- Cars already SPEED down New Road and the High Street - especially near the school and the Northchurch playing fields. What do you propose to do to keep cars and all this new traffic obeying the speed limit and keeping our children safe? Especially with the proposed new amount of vehicles to be using it.
- You MUST develop at least a footbridge (with cycle path) over the canal and river, across from Lock Field over to the Northchurch playing fields/Tesco. This will keep any children who then live in Lock Field safe, away from the roads, so they can visit the park/shops without having to use the VERY DANGEROUS New Road and High Street pathways.
- If children live on Lock Field - you must also develop the footpaths on the High Street as well. Children will want to access Tesco and the Northchurch Playing fields. People park cars on pathways, which are already un-safe, small as it is. There have been times I've had to push my babies in a pram IN THE ROAD due to cars being parked on the pavement! You MUST double-yellow-line all along those pathways!
- You are developing a 'green-belt' area. Firstly, by doing this you are making your 'rules' void. How do you expect anyone in Dacorum to respect you, believe what you say or take you seriously if you develop on a 'green-belt' area? Secondly, how do you plan to keep it 'green'? Are you asking the construction company to include minimum of 2 trees and 3 shrubs per home?
- Instead of building 60 tiny homes that are ugly and bad for the environment. What about building 40 homes that have larger gardens, more trees and shrubs and keep the area vaguely 'green'?
- Will the new houses be 'green' in the sense of - they will all have solar panels and other sources of renewable energy? It is a green-belt area.
- I'm no wild-life expert...but this is not an urban area (such as an old factory in a city being replaced with residential) - this is countryside. Many animals will live there. I myself have seen king fishers, ducks, herons, foxes, badgers, and much more wildlife along that stretch of the canal. You are killing their homes. Not only in the long run, but in the short term - while all the horrible machines are there digging and making noise. What are you doing to protect the wildlife that lives here? Are you planning on keeping a minimum 10 meter wildlife 'belt' between the canal and any potential housing? If this 'belt' is grass - will you plant more trees and shrubs to encourage wildlife to return after the bombardment of a building sight?
- You must add a footpath from Lock Field into Ashridge. So people can walk directly from Lock Field into Ashridge without having to use the foot path on New Road - again, this is too thin and not safe compared with the speed of traffic.
- Everywhere in Berkhamsted and Northchurch there are parking issues. Please can you design the new residential area to cope with the amount of vehicles. For example, plan houses to have ample driveways and garages for residents and guests. And double yellow the surrounding roads to STOP people from parking on footpaths. This is not safe for children. Again, if making safe footpaths means building 40 houses rather than 60 - then do it. Make this estate so that bin lorries and fire engines can EASILY drive everywhere (whilst keeping their bin collectors safe!)
- What about social responsibility? Is this new estate designed for middle and upper-class people? Or is it for everyone? Even working class? Are you mixing social housing between the large detached houses?

- How are you planning to future-proof this estate? Are you planning footpaths to be wide enough for two wheel chairs to pass each other safely? This would also be a safer width of path in case there is another pandemic and people have to keep 2 meters away from each other. Are you adding cycle paths? I think if you are serious about the environment then you should include cycle paths EVERYWHERE - even on New Road and the High Street. Even if cycling does not prove to be popular - you are future-proofing this space for things such as hovercrafts or the food-delivery-robots that you see even today in Milton Keynes. Everywhere footpath in Berkhamsted FAILS for safety. Lets make this new estate safe.
- Repair local roads after development. As seen on the new estates up Durrants Lane - the amount of construction traffic (and its pollution) has ruined the roads. Will you repair and redevelop the roads after this estate has been built?
- All of these new houses (both in Berkhamsted, Northchurch, Tring etc) will create a LOT more traffic on the road. How do you plan to future develop the T-junction next to St Marys School between New Road and the High Street? There is no safe crossing for children over New Road AT ALL! And it is next to a school!!!!
- You MUST develop the infrastructure. How will you develop the Tesco shop parade and parking to deal with greater numbers? How will you develop local doctors and dentists to deal with greater numbers? Which hospitals are due to take on these greater numbers of people and how are you contributing to their development too?

To summarize; I know that growth is inevitable. But you MUST do it WELL and RESPONSIBLY, for the future of our area, our children and our wildlife.

I'm more than happy to talk to someone or detail my thoughts further. I'm happy to provide photographs of cars parked on pathways everywhere, videos of cars nearly hitting myself and my children walking to school etc etc.

If you build this Lock Field estate then do it WELL. Be innovators, be planet-protectors, be an inspiration to other areas who seek to grow too.

QUESTION ANY OTHER COMMENT comment	<p>We am writing to lodge a complaint about the current Dacorum Local Plan consultation. I DO NOT comprehend why you see fit to proceed with such an important consultation in the middle of a national pandemic.</p> <p>The first we heard of this consultation was on the afternoon of Tuesday 23rd February when a leaflet from our local Liberal Councillor (Lara Pringle) was posted through my door. I telephoned Dacorum Planning on the following morning and fortunately a Planning Officer rang back and agreed to send out your consultation brochure. This duly arrived on Thursday, leaving me with only 3 days in which to submit any comments. I was informed that it was unfortunate that we had been overlooked when this document was distributed.</p>

QUESTION ANY OTHER COMMENT comment	<ul style="list-style-type: none"> I have only recently been made aware of the development through word of mouth and have not received a brochure. I live on [SENSITIVE INFORMATION REMOVED] which has many retirement properties and I am now aware of others who have only just been made aware, some who do not have internet access. There has been a major lack of communication between the council and local residents regarding the plan, with limited effort to publicise the plans to residents. This has further exacerbated further as we are in full lockdown – the council has failed to make adequate provisions to either publicise the plans during lockdown or allow for full public consultation. Unfamiliar Zoom meetings are not

inclusive for the public, decisions regarding the local plan should not be going ahead until lockdown is lifted and ALL members of the local community can contribute.

- Additionally, I have received 2 pieces of impressive marketing literature through the post from developers for Bullbourne Cross which highlighted what they believe are the benefits of this proposal. So after this, when I was made aware of the local plan from friends, I assumed they were related and wasn't sure if they were the same thing. It is confusing for residents to differentiate between 2, especially when DBC has made insufficient efforts to publicise the local plan. I had to seek clarification on both – it is thoroughly confusing

QUESTION ANY OTHER COMMENT comment

Firstly, I would strongly like to emphasise my displeasure at the poor consultation process. I was only made aware of this very important consultation a few days ago by social media and feel many local Councillors have done a very poor job both in making us aware and helping us understand the rationale behind this Plan or the tactics they are employing to get the best outcomes for our area. I have had very little time to prepare a proper response so have had to submit the best I have had time to do, below. However, **I would like it to be recorded that in addition to my response below I completely support the more detailed submissions made by Berkhamsted Citizens Association and Berkhamsted Residents Action Group together with the comments broadly made locally and nationally by the Campaign for the Protection of Rural England.**

QUESTION ANY OTHER COMMENT comment	I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment	<p>Firstly, I would like to record my opposition to the proposed development at Bulbourne Cross. I am very concerned about the level of marketing they have been able to use and wonder how this is allowed as separate to the overall plan, if Dacorum borough council are not allowed to market in the same way then surely this is unfair competition.</p> <p>I also want to record my opposition to the scale of the proposed Local plan at Berkhamsted due to the fact that it includes building on green belt land and does not adequately address the issue of increased traffic and pollution in such a small town.</p> <p>I would also like to request that more council housing is built and smaller more affordable housing rather than all the huge very expensive housing that seems to be evident in the current housing development off shooters way.</p> <p>I am pleased to see proposals for new schools but we need more on accessibility into the town for all (bus routes and safe cycle paths).</p> <p>I would also like to comment that the website for making comments online to the proposal was very difficult to navigate, I tried several times but had to come back to email.</p>

QUESTION ANY OTHER COMMENT comment	<ul style="list-style-type: none"> • I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown • I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard • Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT felt excluded. • Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home schooling children as well as dealing with the challenges of CV19 and lockdown

- The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation
- There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing
- The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT
- It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown
- People expect consultations to involve public meetings where officers can explain what is proposed and answer questions
- Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, *"reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law"*.

QUESTION ANY OTHER COMMENT comment	I attended the exhibition in Berkhamsted in 2017 and was able to ask questions at the time. However there was no opportunity to formally follow these up or to get answers in writing. More than three years have passed and with the coronavirus lockdown lasting a year, and as a concerned resident of Dacorum, I have noticed enormous activity in house building both at Bearroc Park in Berkhamsted and Roman Park in Tring. I would like to know if these are part of the Local Plan and when was approval for these sites made public? I am not aware of any further information been circulated during the last year and although a short extension has been granted, I would suggest a much longer extension given the aftermath of the coronavirus pandemic. Surely there is time to assess this. Notwithstanding this, please find below my objections:

QUESTION ANY OTHER COMMENT comment	<p>The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein</p>

for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	Before I state the reasons for my objections, I have to say that the communication for this consultation has been very poor. If it wasn't for our local Libreal Democrat councillor and a flyer received through my front door about the Bullbourne Cross proposal (which I object to) I would not have known at all. I actually wonder how many other residents are not aware because of the lack of communication. For something this vital to our local area, is there a reason why there was not more communication such as leaflet drops through all letter boxes, a window display in one of the vacant shops in the High Street?

QUESTION ANY OTHER COMMENT comment	In this time of a pandemic trying to push legislation through that does not allow for actual representation is undemocratic. Why this has to be done now I really cannot understand. Without actual physical representation I believe that the council will just rubber stamp this and like the car park addition to Berkhamsted we will see a degradation of the physical space at the behest of commercial requirements. I believe this plan should be delayed until representaiion can be delivered in terms of physical meetings. I look forward to this plan being delayed until we can have real attendance to discuss these plans

QUESTION ANY OTHER COMMENT comment	<p>We are writing to object to the plan for development in Dacorum for the following reasons:</p> <p>The number of houses proposed for development per year until 2038 is based on figures produced in 2014, we understand that this proposes a figure of 1,023 houses being built in the area. These figures are now outdated and we're superceded by ONS figures produced in 2018 which only proposed 355 houses per year built. The government figures given need to be challenged by yourselves on this basis. In addition, the figures derived are not the objectively assessed for our area.</p> <p>Secondly, green belt has been defined as land that can only be developed upon in exceptional circumstances. Despite the statement in the plan, the simple need for extra housing cannot be defined as exceptional.</p> <p>Thirdly, resources cannot support the extra houses currently and there is nothing in the plan that states how this will be resolved. In particular, water extraction is at the maximum it can support without the extra supply that will be needed for these developments.</p> <p>Fourthly, there has been insufficient effort to locate brownfield sites in preference to releasing greenfield sites for development.</p> <p>Fifthly, the proportion of social housing proposed is far too low in comparison with the waiting list of 7,000 awaiting housing. It should be ensured that housing meets the needs of the people looking to be housed locally.</p> <p>We are also concerned that there has been insufficient publicity of the plan to ensure that people know what is happening. It is apparent that a significant number of people did not receive a copy of the plan in the post. We did not receive one and had to request it very late on in the available time for consultation because we were unaware of it.</p> <p>Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law". The same should be done for Dacorum.</p>

QUESTION ANY OTHER COMMENT comment	The dogged determination of the council to continue a public consultation (which has been extremely poorly publicised)during a national lockdown is shameful and undemocratic - the council should be giving opportunities for everybody to take part and be listened too which is simply not possible in a meaningful way when there can be no face to face meetings - a decision of such importance and with the potential to have such a massively detrimental impact on the countryside for perpetuity should absolutely NOT be pushed through in this underhand way which severely limits the

voice and rights of your constituents. Your website is very confusing and difficult to navigate making it even more difficult for your constituents to feed back their views to you.

Please take time to reconsider your proposal to destroy the countryside by reviewing what is actually needed and the most appropriate location for it, and have the decency to engage openly and honestly with your constituents when it is possible to do so rather than hiding behind the very handy excuse of COVID to restrict citizens rights in this way.

For the avoidance of doubt, I OBJECT to these proposals.

QUESTION ANY OTHER COMMENT comment	Unfortunately at Wednesday night's Dacorum council meeting the motion to extend the Local Plan consultation period to take account of the ongoing Covid restrictions was rejected, seemingly along party lines for: 20, against: 27. The council is seeking to railroad this developer's charter through. The appalling lack of an evidential base and forward planning to account for even the basic elements of public infrastructure means the council needs the public's help more than ever. It needs to formulate a creditable plan and do some proper consultation and research.

The 'winner takes all' approach has got to stop, and a collaborative approach is desperately needed for the good of the region.

QUESTION ANY OTHER COMMENT comment I don't believe the consultation has been fair, as numerous residents have not received the information packs that some households have received. I do not receive free local papers, and during the lockdown have not been out to see any information that may have been available (ie library). I know this information has been published on Facebook, but strongly feel something of this importance should have been more widely distributed, after all, note everyone has access to the Internet and with home-schooling, lots of tools/time has been taken up. Therefore I believe that consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment	<p>Q9 Additional</p> <p>— I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown</p> <p>— I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard</p> <p>— Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT felt excluded.</p> <p>— Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home schooling children as well a dealing with the challenges of CV19 and lockdown</p>

— The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation

— There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing

— The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT

— It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown

— People expect consultations to involve public meetings where officers can explain what is proposed and answer questions

— Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".

QUESTION ANY OTHER COMMENT comment	I was deeply disappointed that the recent council meeting which I observed did not see fit to extend the deadline of tomorrow for responses to the proposed Dacorum local plan. The complexity of it, the incredible effort needed to get to grips with it online together with all the pressures of the pandemic have made it very difficult to respond. Evidence suggests that only a few percent of people have accessed the consultation;lockdown has meant that those without easy access to technology have been excluded. On top of this, advertising has been patchy.However,I have tried my very hardest and this is my carefully considered response.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure

associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. This should include the Area of Natural Beauty as seen from all sides of Tring. To include the aspects from Wigginton and Tring Park as well as from Ashridge and Ivinghoe Beacon.

QUESTION ANY OTHER COMMENT comment

I write to express my concerns regarding Dacorum Borough Council's local housing plan. I send this email having attempted without success to navigate the extremely complicated and difficult to follow planning website. As somebody who considers themselves technology literate, the lack of ease of finding information in layman's terms about the plan and the impossible to navigate plan website which I could not fathom how to respond to, highlights the issue of marching forward such a huge life and area changing plan during a pandemic. When meetings and consultations are impossible face to face, for many less technology savvy members of our community, this stops people being able to understand or even have any awareness of the plans at all and those people have had their say taken away from them by the council's decision to proceed with the consultation deadline. Based on the information I have been able to access I have huge concerns about the general way in which the plans have been decided upon.

QUESTION ANY OTHER COMMENT comment	<p>I am writing to you to make some points regards the Dacorum Local Plan 2020 to 2038</p> <ol style="list-style-type: none"> 1 I know that the deadline has already been extended for the consultation. However I feel in the current circumstances when the population is in the midst of a third lockdown that not everyone's thoughts have been able to focus on this Dacorum Local Plan. Hence I would like to propose that the deadline is extended again. 1 Some of my concerns 1 a) From 23.120 " There are few opportunities for new road capacity in the town. The careful location of new development and promoting opportunities for sustainable travel, will in part help tackle a number of parking and traffic issues. " <p>The main artery from the A41 in to Berkhamsted - Kings Road A416 - is a narrow road and is already extremely busy during peak times and this will become more congested. Shootersway will be affected greatly by the increase in traffic as a result of the large development in the area.</p> <ol style="list-style-type: none"> 1 b) Please can you detail if there are now any further proposals for waste management ... "The wastewater network capacity in this area may be unable to support the demand anticipated from this development. Local upgrades to

the existing drainage infrastructure may be required to ensure sufficient capacity is brought forward ahead of the development. Where there is a potential wastewater network capacity constraint, the developer should liaise with Thames Water to determine whether a detailed drainage strategy informing what infrastructure is required, where, when and how it will be delivered is required.” From Draft Infrastructure Delivery Plan Appendix B - Berkhamsted Schedule.

- 1 c) This is near an Area of Outstanding Beauty and I do wish reassurance or some explanation that this will continue to be so for future generations to enjoy and relax in.

The increase in population could have an enormous effect on the Ashridge Estate.

QUESTION ANY OTHER COMMENT comment It is clear that the Council is in a very difficult position as it attempts to generate this Plan. My view is that it should not proceed in its current form and on its current timetable, because

1. The public consultation has taken place during a period of covid lockdown, and a significant number of residents, who are unable to use computers, have been unable to travel to view the documents, and have effectively been disenfranchised. Public consultation should not be completed until after travel restrictions are lifted.
2. The Plan refers to the South West Herts Joint Strategic Plan. It is encouraging that these Councils are intending to work together to provide programmes which will serve the residents of this area as a whole. I suggest that the Dacorum Local Plan, which extends to 2038, should be configured to align with this Joint Strategic Plan, which is scheduled to be available in late 2023.

QUESTION ANY OTHER COMMENT comment	Input as requested during the Consultation to the proposed Dacorum Local Plan. (I use email as the Portal is way too cumbersome for people to use!)

Why on earth are DBC and the government pushing through this consultation when we are in a time of such huge change. Brownfield sites have become available which could be used for housing and there seems a pressure to speed through an incorrect process with **INCORRECT NUMBERS OF NEEDED HOUSING** in the borough.

By contrast, in October 2020, Buckinghamshire Council withdrew the Chiltern and South Bucks local plan in part due to Covid-19, noting that a revised plan would be drawn up to "*reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law*".

(<https://buckinghamshire.moderngov.co.uk/ieListDocuments.aspx?CId=336&MId=16533&Ver=4>, agenda item 7). DBC's decision to push ahead with a draft plan in circumstances where, as the government has stated "*the way that the country lives, works and travels continues to change more rapidly than at any time since the war*", appears misguided, both from the perspective of ensuring that a proper consultation takes place, and from the perspective of the need to address the changes wrought on residents' way of life, and consequentially our planning needs, by the pandemic. ('*Government response to the local housing need proposals in "Changes to the current planning system"*', December 2020 (announcing decisions following planning consultation launched in August 2020) (Government December 2020 housing need consultation outcome)

<https://www.gov.uk/government/consultations/changes-to-the-current-planning-system-to-respond-to-the-local-housing-need-proposals-in-changes-to-the-current-planning-system>)
As the government notes, "*This has implications, for example, on demand for commercial and retail floorspace in our cities and urban areas. We want our towns and cities to emerge from the pandemic renewed and strengthened – more beautiful, more healthy, more environmentally sustainable and more neighbourly places, with greater public and private investment in urban housing and regeneration*". (Government December 2020 housing need consultation outcome.)

QUESTION ANY OTHER COMMENT comment	<p>I am very concerned that amongst the wider Dacorum community there is a general lack of knowledge about the local plan and more importantly that the consultation period for it is about to close and as such people have missed the chance to comment on their future. I was under the impression that an awareness campaign was due to be in place but as a resident, I have received or seen nothing highlighting the consultation.</p> <p>Due to Covid restrictions it has not be possible to engage and inform people with events such as:</p> <ul style="list-style-type: none"> • Door to Door canvassing of the local plan consultation • Interested parties to meet and canvas at the various town markets <p>Covid restrictions have impacted</p> <ul style="list-style-type: none"> • Our ability to attend Council Meetings in person rather relying on access to online forums • Residents being able to meet and consider responses to the local plan <p>The Government has asked all of us to restrict our interactions with the general public as it is both irresponsible and unlawful to do otherwise.</p> <p>The council should extend this consultation by many more months, until the current crisis is over and an additional subsequent period be provide for the full engagement by all Dacorum residents.</p>

I feel the strategy has failed to take account of a number of important issues or has diminished their significance, most importantly - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth should be balanced against and not override environmental concerns and climate obligations.

QUESTION ANY OTHER COMMENT comment

With reference to the above consultation. I have not been able to get on to any of the links given to view the consultation, however, I would like to register my objections to the plans for approx. 3000 houses to be built between Long Marston, Wingrave and Cheddington. The plan is totally inappropriate for the whole area. There is limited access to the site as all roads come through three small villages and other infrastructure is non-existent. There is an ongoing problem with flooding in Long Marston, as well as many of the fields around here.

I do not understand how plans can be made when the land is owned by several different private owners and it is definitely not a major infrastructure project!!!!!!

I do not live in Hertfordshire but on the edge (in Buckinghamshire) of the proposed project. Why is it that the consultation has been given such a limited time when the vast majority of the local population were not even made aware of them, especially those in Buckinghamshire who would be severely impacted by the plans. You cannot view the plans in the local library – these have been shut for many months, and as stated previously the links given to view the plans are unattainable.

I am in disbelief that an area such as this could even be considered for such large scale building,

I look forward to receiving your comments although, being slightly sceptical, I would doubt that I will even get an acknowledgement.

QUESTION ANY OTHER COMMENT comment This is a complaint as to how you have managed the consultation process for the local plan for Dacorum emerging strategy development. We are in Lockdown, we are home-schooling, juggling jobs and worried about job security. This is not the time to be pushing this through. We haven't even received literature about it! Shocking.**Included files****Title** Question: Any other comment**ID** EGS10380**Person ID** 1267063**Full Name** ANN CONROY**Organisation Details****Agent ID****Agent Full Name****Agent Organisation**

QUESTION ANY OTHER COMMENT comment	I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment	Whilst we are in the midst of a pandemic and in lockdown I do not believe this consultation should be taking place at all. We cannot view the plans etc at libraries or council offices, so we are dependent on electronic means. This disenfranchises residents who do not have access to the internet, email etc and therefore I think it is unlawful and if not at best unfair. It should have been postponed, and it shows the arrogance of councillors who failed to stop the process in council meetings when the issue was discussed and that opportunity was open to them.

QUESTION ANY OTHER COMMENT comment	<p>The consultation process is not a process. It is appalling. The timing of which has been accelerated during a global pandemic for the only purpose of sweeping it under the radar. Had it not been for local campaigns / flyers etc 99% of Tring residents would not have known the consultation was running at all. Without face to face consultation you have alienated vast swathes of elderly and those that do not have the latest and greatest technology.</p> <p>Then add the impossible portal to navigate and unless you have a bachelors in IT, you are not going to be "consulted" at all. How incredibly poor and detrimental to democracy. Unfair and unfit.</p>

QUESTION ANY OTHER COMMENT comment	This document is long, at times impenetrable, and has plainly taken a large team of people a great deal of (paid) time to research and compile. It is, therefore, not reasonable to expect any individual to read and understand the minutiae of the Plan in the time available (if at all). My comments will, accordingly, be confined to certain areas.

QUESTION ANY OTHER COMMENT comment	We believe a much simpler public consultation should be implemented. The current consultation is not fit for purpose. Asking members of the public to comment on a huge document and answer specific questions about the NPPF is not a user friendly consultation. We have been approached by numerous members of the public who have not responded to the consultation due to its incredible complexity. Dacorum Green Party believe this consultation is fundamentally flawed.

QUESTION ANY OTHER COMMENT comment	The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	<p>I wish to object to Dacorum's Local Plan, both from a procedural point of view and also regarding the content.</p> <p>Firstly regarding the procedure and notification. There needs to be proper and effective consultation, not something that appears to have been ushered in through the back door during a pandemic. The consultation period should be extended and remain in force until well after the pandemic has ended.</p> <p>1) This consultation was not well advertised. It has taken place during three months of lockdown during a pandemic and many members of the community are unaware, despite the seismic changes these proposals would make to the borough. I myself only heard about it through the latest edition of the Parish magazine.</p> <p>2) There needs to be proper consultation, which means public meetings with proper and effective explanation of what is proposed.</p> <p>3) The online system is extremely confusing and not sufficient. I have a degree in engineering and am computer literate but found it very hard to comprehend what the proposals are and exactly where they are taking place. The online system is even more unfair to older members of the community and those who are less computer literate.</p> <p>4) The mapping in the proposals is appalling. Truly woeful. The maps, both in the proposal document and in the virtual presentation, are very small scale with extremely poor detailing and minimal labelling. I give two example below.</p> <p>local_plan_emerging_strategy_for_growth_2020_2038_draft_proposals_map.pdf</p> <p>https://dacorumlocalplan.consultation.ai/#board-10</p> <p>I live in the area and cannot understand from these maps the precise locations of the proposals, or even where my house is!</p> <p>In the map on this link below you haven't even spelt the name of my village, Gaddesden Row, correctly. If you can't even get that right, I have no confidence in your plan to build 16,600 homes in the borough.</p> <p>https://dacorumlocalplan.consultation.ai/#board-16</p>

5) It is unclear in the online system how to raise 'big picture' concerns rather than replying to each individual point in a document running to hundreds of pages.

I was interested to hear other people's thoughts so clicked on 'what people say' but the links don't work.

QUESTION ANY OTHER COMMENT comment

Lastly, I would like to make my concerns about the fact that the consultation has not been made visible to all residents, and it is inconceivable that such an important document has not been posted out to all residents, but instead awareness has been raised via social media etc.

My elderly mother who is also resident in Northchurch is NOT on social media and is partially sighted and has been shielding throughout the Covid pandemic. She has not received any postal notification about the draft plan – how are the elderly and those without internet access supposed to respond if they have not been made aware of the draft plan in the first place?

We are custodians of the future and it is unjustifiable to lose so much of our green space in order to adhere to an outdated policy which does not stand up to scrutiny.

QUESTION ANY OTHER COMMENT comment	<p>This consultation should not be being pushed through during a national lockdown.</p> <p>This consultation seems to be taking advantage of COVID disruption to push through highly controversial local developments. The consultation has been extremely poorly advertised and the inability to leave one's house makes any kind of organised objection far more difficult. The council seems to be taking advantage of the lockdown nature of local residents and at the very least should delay this consultation until all lockdown restrictions have been eased to ensure appropriate evaluation.</p>

QUESTION ANY OTHER COMMENT comment	<p>I support everything said by the One Voice Alliance.</p> <p>I consider that there should be a moratorium on any further significant in housebuilding until the Borough has a healthcare system that is at least on a par with the national average and can then accommodate an increase in the population, and until there is a proper sustainable water and sewerage infrastructure that does not involve the desiccation of the local chalk streams and a cessation of our water supply in the summer months.</p> <p>Lack of Proper Consultation To begin with I want to protest at the way this consultation has been conducted. My household has not received ANY communication from the Council about this Plan. No doubt because of the pandemic, there has been no public display or model showing housing or traffic movements consequent to the Plan. Despite a woeful lack of public engagement, the Council has pressed ahead with a process in a way which could be construed as avoiding public scrutiny. It is Putinesque and would probably be wide open to legal challenge.</p>

**QUESTION ANY OTHER
COMMENT comment**

As a chalk river, the River Bulbourne is of international significance and it falls into the category of a priority habitat under the Natural Environment & Rural Communities Act 2006 (S41). Many species living in it and along the banks rely on a sustained flow of water which is normal in a natural chalk stream fed partly by underground springs like the Bulbourne. A recent case study by 1S. Wilson provides evidence that the Rivers Bulbourne and Gade no longer behave as chalk streams should. He demonstrates that rapid rise and fall in the water levels are more typical of urban run-off than chalk streams and he observed flooding. Surface water running off hard-standing (roads, paths, rooftops, etc) is rapidly directed via drains into these rivers during periods of medium and high rainfall causing the water levels to quickly rise and fall. What should be clear water often becomes cloudy due to silt, rubbish and pollutants. Progressive silting and growth of vegetation in the water channels reduce the flow of water and increase the risk of flooding. - Will buildings and roads increase the probability of damage to the river ecosystem and some homes being flooded? As these rivers are of global significance, should the Local Plan incorporate measures to restore and protect them? Dacorum Borough Council have a duty to have due regard to the conservation of biodiversity under the Natural Environment and Rural Communities Act 2006 (S40). Those habitats and species which are of principal importance for the conservation of biodiversity in England are listed in Section 41 and include the House Sparrow, Cinnabar Moth and Great Crested Newt. s biodiversity likely to be increased, or diminished at the proposed development sites? What specific biodiversity, green infrastructure or compensating measures do you think should be recognised in the various site plans? Are Local Authority measures in place to ensure that developers adhere to a development plan after Planning Permission is granted and before any long-term biodiversity damage occurs?

I am concerned at the loss of hedgerows and trees - all impacted if these wetlands were built upon. We had our planning permission staunchly objected by the conservationists - and we accordingly built a smaller extension and used natural wood as the house's outer covering. How can you justify therefore building hundreds of houses in the same patch of land? Bank Mill Lane has only a handful of cottages - several listed buildings - and already there are traffic issues with cars overflowing from the Old Mill pub. There have been several near collisions on a road that is only wide enough for one car to drive down - and really should be one way. How will this road and indeed the bridge to Bank Mill sustain more cars and people? I can safely predict there would be deaths if this were to be the case.

Investment funds are being allocated to Hemel Hempstead for transport and amenity requirements associated with expansion of the town. Equivalent financial and infrastructure support is not being given to Berkhamsted and Tring.

I think the number of proposed developments across Dacorum is excessive and question the formula used to calculate it...

I am also concerned about families with sick children or elderly and disabled people trying to get to the Gossom's Road surgery where there is already inadequate parking? Trying to see a doctor prior to the pandemic was a near impossibility - how will the town cope with a huge influx of people, when there are already many elderly people living here who will need access to their local GP? Are we to simply never get to see a doctor as there will not be enough GPs to care for that many people...

I am deeply concerned about the strong Countryside / Green Belt boundary Impact on valley sides and important dry valley location.

Also I am worried about the encroachment of the urban area along the valley bottom and adjoining open countryside. Also the distance to town centre services and facilities, employment, land and station. Finally as I have already stated, the impact on setting of the River Bulbourne Reduction in the degree of separation between the town and Bourne End.

QUESTION ANY OTHER COMMENT comment It appears that Dacorum Borough Council have tried to get this local plan passed in a very underhand way. Racing ahead in a time of National Lockdown when residents are unable to get together to see plans and review proposals. Everything is hidden away on difficult to understand websites when not everyone has access to the internet. Not challenging the number of houses set out by Government guidelines, nor changing them when the guidelines changed. Northchurch is not an urban area. It is not West Berkhamsted. The proposed sites are on Greenbelt areas of fields and hedgerows with lanes not thoroughfares. An area of outstanding natural beauty which would be permanently destroyed.

QUESTION ANY OTHER COMMENT comment	<p>My first point is about the process itself. The decision to run a public consultation during a pandemic and over the holiday period was questionable. As people would be home and in lockdown, neither out and about nor interacting with each other, the customary channels for engaging the public were severely diminished. This would include word of mouth, exhibitions and information events at community centres, the free local papers that people would pick up while out, any local groups flyering householders to lobby them to respond (as this is not allowed). All of these casual ways of raising awareness would not be available at this time of national lockdown in what was a tier 4 area for much of the relevant period. However, having decided nevertheless to go ahead despite these issues, the council should have recognised the importance of getting the information to each and every household. It is therefore all the more surprising that the council only decided as an afterthought to distribute an information leaflet to every household.</p> <p>Along with most of the people in Potten End village, I did not receive that information leaflet. An online poll of the village suggested 81% didn't receive it. Nor did I receive the October 2020 "Dacorum Digest" magazine that had some information about the local plan within it (although notably this was from before the consultation even started). These gaps were never remedied, as very few people would have known to ask for that which they did not know they ought to have received.</p> <p>I believe this has left many parts of the Dacorum population in ignorance of this process, and that the Council has failed in its duty to ensure robust engagement to such an important plan.</p>

QUESTION ANY OTHER COMMENT comment	<p>This consultation process is deeply flawed and will not secure the required feedback from residents. There are many, many people who are not computer literate to be able to respond on-line. There were more than 50% respondents to our Parish Survey which were hard copy, with people preferring to respond with hard copy responses rather than complete the survey on-line.</p> <p>For our Neighbourhood Plan consultation and survey we had a separate questionnaire for young people to feed in to. Where are the feed back from young people with this consultation process? There is none at all and yet many of these young people will be totally affected by this Local Plan. Why haven't DBC sought their views?</p>

QUESTION ANY OTHER COMMENT comment	<p>I am very concerned that amongst the wider Dacorum community there is a general lack of knowledge about the local plan and more importantly that the consultation period for it is about to close and as such people have missed the chance to comment on their future.</p> <p>Due to Covid restrictions it has not be possible to engage and inform people with events such as:</p> <ul style="list-style-type: none"> • Door to Door canvassing of the local plan consultation • Interested parties to meet and canvas at the various town markets

Covid restrictions have impacted

- Our ability to attend Council Meetings in person rather relying on access to online forums
- Residents being able to meet and consider responses to the local plan

The Government has asked all of us to restrict our interactions with the general public as it is both irresponsible and unlawful to do otherwise.

The council should extend this consultation by many more months, until the current crisis is over and an additional subsequent period be provide for the full engagement by all Dacorum residents.

I feel the strategy has failed to take account of a number of important issues or has diminished their significance, most importantly - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth should

QUESTION ANY OTHER COMMENT comment

I believe that the Draft Local Plan publication date, should be delayed beyond the current lockdown caused by the Covid 19 epidemic. There has not been enough opportunity for large sections of the community that could not access the IT version of the consultation. The community could not access the library, the Forum, or Victoria Hall. The consultation should be regarded as invalid and anti-democratic. I understand other boroughs have delayed their consultations.

QUESTION ANY OTHER COMMENT comment	I've been trying to recover my password in order to make a comment on the strategic plan, but though the website says it has sent me a link to reset my password, I have still not received a reset email. I cannot print off the pdf consultation document either so have no other way to reply other than a direct email.

May I therefore submit some comments in this email?

We recently heard- last week-of the inclusion of Long Marston as a potential site for 3,000 houses, as part of Dacorum's strategic plan. I realise that it is one of many options, but the fact that it is proposed at all, is extraordinary.

Long Marston's name means Long Marsh, we are a wet, rural area with increasing flood problems, and wet habitat offering unique spaces for rare and protected species e.g. black poplars and greater crested newts. The village flooded several times in the last months. Our roads are too narrow for even 2 cars to pass, in many places. We have a conservation area and listed buildings. Yet of all the places to suggest new houses, we are a potential site? I believe strongly in local democracy, but I wonder then if anyone from Dacorum who has been involved in writing the report has visited the site in question, or spoken to residents, and would perhaps like to do so after wet weather. We certainly, as a village, have had no notification of the potential for building, no discussion, no consultation.

So if you're looking to build houses on a flood plain, to increase flooding for others in the village, and to build houses which will become uninsurable when they too flood, on small narrow roads with potholes far from any major road network, where community cohesion will be ripped apart as all locals who know of the plans object, where rare local species will be negatively affected, green sites destroyed, conservation areas made pointless, then what a great choice. This kind of proposal is precisely what makes people lose faith in the competence of local decision making.

QUESTION ANY OTHER COMMENT comment Two other events since 2014 may also materially affect projections of required development: Brexit and the Covid 19 pandemic. How far are you updating your forecasts to allow for the economic impact of these developments? Together with changes in the retail sector (from in person to online shopping), there may be less demand for commercial and industrial space. In turn, this may free up more Brown Field space than could have been envisaged when the Plan was compiled.

QUESTION ANY OTHER COMMENT comment	<p>ENVIRONMENTAL IMPACTS</p> <p>Adverse impacts are currently already occurring on the Beechwood SAC, SSSI's and all our local honey pot sites as a result of human recreational uses. In the wider Tring area the existing network of footpaths, bridleways and byways are currently being adversely impacted by current levels of use by walkers, cyclists, runners and horse riders. This deterioration is evident in the visible impacts on the surfaces of the various trackways. Parking vehicles on road verges and under trees is causing soil disturbance and ground compaction leading to loss of vegetation, shortening tree life and loss of biodiversity. Current measures do not exist to rectify these impacts. Additional adverse impacts will occur at a greater rate as a result of increased use due to development growth in the north-west corner of Dacorum, leading to increased impacts on the features of environmental importance. Inappropriate development by local authorities (e.g. building in non-sustainable locations such as floodplains) do not result in sustainable development. They provide problems for the future. Large increases in growth for Tring will result in further deterioration of the local environment. Environmental NGO's such as The National Trust, The Wildlife Trusts, The Woodland Trust, etc are left with managing increased human pressure on their sites, attempting to minimise the impacts but not able to sustain the long term biodiversity interest.</p> <p>Existing valuable habitats within all proposed sites must be retained and safeguarded. Primarily these are mature trees and ALL hedgerows within the sites and along the boundaries.</p> <p>Safeguarding requires that British Standards must be applied where they exist. B.S. 5837: 2012 Trees in relation to construction must be strictly applied to protect both trees and hedgerows (e.g. erect metal protective fencing, avoid soil and root compaction). Prior to on-site development the existing interest should be managed sympathetically and not allowed to diminish in order to facilitate ease of development. Increasingly biodiversity interest is compromised by developers prior to site assessment. Preliminary biodiversity assessment by the local authority or an independent ecological consultancy is therefore required so as to evaluate the true cost of developing a site. This assessment should include assessment of carbon, nitrogen, nutrient and other relevant impacts</p>

QUESTION ANY OTHER COMMENT comment	<p>The plan is to build the wrong type of house in the wrong place. There is no consideration for the infrastructure to support the addition homes.</p> <p>Local schools are at capacity and the plan just says "further discussions are needed with the county council"!</p> <p>The road layout cannot support this additional traffic. Most of the houses are off of small lanes. The A41 cannot cope with additional traffic.</p> <p>Houses should be built where people work not encouraging additional commuting and the additional pollution that goes with this.</p> <p>Why are we losing the only council building we have in Berkhamsted? Where will the police be based? Where will the Council meet? Where will people meet?</p> <p>In summary this plan wastes acres of farmland and beautiful countryside and damages the setting of the Chilterns Area of Outstanding Natural Beauty. It plans too many houses where there are too few local jobs, making commuting worse. The country needs affordable housing near jobs.</p>

QUESTION ANY OTHER COMMENT comment 1 Initially, I wish to offer objections to the way the draft Plan has been put out to consultation. In view of the restrictions imposed by the Covid-19 pandemic, and the concomitant necessity of conducting everything on line, a substantial proportion of the public has been disenfranchised because they neither have access to computers, nor the

ability to use them. To my mind this renders the consultation void. The Plan should be withdrawn and rerun at a time when all residents can access it.

QUESTION ANY OTHER COMMENT comment

I have been unable to access the on-line portal, an issue with registration??

To sum up I am sharing my concerns around:

- 1 The numbers of houses we are looking to deliver.
- 2 The abilities of central government, HCC or utility companies to deliver the infrastructure
- 3 The wrong assumption that in the future society is going to be walking, cycling or jumping into electric cars – we live in a hilly landscape and as a commuter town our residents will be using their cars.
- 4 A desperate need and personal plea to protect our green belt, countryside and to be mindful of our existing communities and their over development.

My questions are rhetorical, I have had responses already via the delivery of the very useful and informative booklet that came through my letterbox and from visiting the virtual public consultation. I would like to congratulate the officer(s) that put that virtual tour together – amazing! User friendly, informative and very quick response from the ‘chat’ option. Unlike public facing consultation no time constraint, no queues and no need to rush. Having said that face to face is something I have missed no chatting with neighbours, officers or fellow event participants – I have missed the debate, can’t wait to get back to ‘normal’ and see the end of this pandemic.

QUESTION ANY OTHER COMMENT comment	We have grave concerns about the provision of medical care in the whole of Dacorum since we have so few Accident and Emergency hospitals to which we can go.

In Berkhamsted itself we are still in the middle of a number of processes of merging GP surgeries together. This has happen to us twice in the last few years and the current situation is as yet totally unknown as to whether we will have sufficient access to local GP services. In the few years we have had a particularly poor and unreliable service which has led us to complain to the local Clinical Commissioning Group and our grievance was upheld. So to rely on this new service for thousands of more patients, as it is untried and untested for the existing number of patients seems to be very rash to us.

We were very disappointed that we only found out about this consultation two weeks ago from neighbours in Berkhamsted and were then dismayed to find out that the whole of our (address removed) road here, close to where most of your developments are taking place, were also not in receipt of your plans!! The consultation should have started with us back in November 2020. There is a mountain of documentation to read through and it is totally unfair that we have only had days to read and reply to this.

QUESTION ANY OTHER COMMENT comment

I support the submissions of the Chiltern Countryside Group (CCG) and the Grove Fields Residents Association (GFRA) on this question.

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socio-economic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation.

Whilst part of any planning consent for development of any large sites could require associated infrastructure provision and/or financial contributions from developers, historically, construction of such infrastructure lags behind development and occupation, thus putting pressure on existing resources for possibly many of the 18 year period of this Plan. Indeed, there is a risk, particularly with present economic uncertainties and unpredictability for the future, that developers could simply run out of money so key elements of infrastructure never gets built.

I support measures to improve the economy of the Borough's towns, but this should not be at the expense of developing sites which are already thriving businesses (such as Tring Brewery) or have historical value to the town (such as Tring Museum). I do not support the development of a new large supermarket on the edge of Tring as not only is this likely to attract shoppers away from the town centre shops & weekly markets but will also increase traffic. We find this completely unnecessary with the currently undeveloped Lidl site at Northchurch/Berkhamsted and the wide range of supermarkets already within a short drive & served by public transport.

QUESTION ANY OTHER COMMENT comment	<p>Swift numbers have declined across the UK by 53% between 1995 and 2016. By incorporating a Swift brick in all new houses, we can save these beautiful birds. On fine summer evenings Swifts gather in "low flying screaming parties" as they chase each other around the buildings where they nest. Because they rely on eating insects, Swifts can only live in the UK for a short period in summer when insects are plentiful. Swifts migrate south to Africa in August and return to us in the following May. Let's make sure we continue to have Swifts every summer.</p> <p>Edward Mayer of Swift Conservation (www.swift-conservation.org) believes the way forward is to get swift bricks and boxes into local government plans. The Economy has changed dramatically since the Pandemic and this should be reflected in a reassessment of the Plan to develop Green Belt land.

QUESTION ANY OTHER COMMENT comment	I am concerned that amongst the local community, there is a lack of knowledge about the local plan and it is only through the use of social media by local residents, that most people even know anything at all about the proposal.

Due to the current environment with COVID, I believe that the consultation should be extended by many more months, to give people the opportunity to view and comment on the proposal. As we are in lockdown, a lot of people are housebound and as such, do not have the facility to discuss with their fellow local residents or councillors, the full implications a development of this scale will do to our town.

I feel this whole proposal is outdated and has failed to take into account a number of important issues, mainly the prioritisation of brownfield sites to meet housing needs, the huge impact a development of this size will have on the physical and mental health of residents (both current and new) and the environmental impact.

QUESTION ANY OTHER COMMENT comment

There is huge concern of the effect such vast numbers of dwellings proposed will have on already congested roads in all areas. Despite the idealistic ideas that new communities will all travel by local bus/walking and/or cycling, this is an unrealistic notion. Bus services which cater for outlying villages are consistently being reduced due to Government cuts/poor take up and unless this is addressed, you will always have a car-reliant population.

By increasing the numbers of housing and thus the population, the enjoyment of semi rural areas will be ruined and the reasons why people choose to live in smaller towns/villages in the first place will be negated.

QUESTION ANY OTHER COMMENT comment	Hertsmere supports the key principles within Dacorum's new Draft Local Plan, including increasing the densities of development within urban areas. The plan is comprehensive and well supported by evidence; however improvements could be made to the document's layout so that it is easier to navigate. This was particularly apparent when looking at DM policies which referenced a certain location or policy area. Hertsmere does raise some concerns over the approach to meeting the identified needs for both housing and employment and further discussions with other members of the South West Herts area, including Hertsmere, are required to establish

how long term growth requirements can be addressed across the wider Housing Market and Functional Economic Market Areas.

QUESTION ANY OTHER COMMENT comment As noted in reference to Policy SP4 (The Housing Strategy) in response to Question 2, DBC may need to include further sites in the next stage of the Plan as the figure of 16,596 net dwellings which the Plan identifies land for is based upon the Government's proposed revised standard method, which is no longer being taken forward following the Government's consultation. The housing target for DBC may therefore be higher than stated in this consultation version of the Plan and subsequently, further sites may need to be included in order for DBC to meet its local housing need figure.

Dacorum should also continue to engage with Hertfordshire County Council (HCC) to consider the potential of any of HCC's landholdings in the Borough which may be suitable and available for education use.

QUESTION ANY OTHER COMMENT comment	<p><u>Consultation:</u></p> <p>To undertake consultation during a period of lockdown when access to documents and officers other than over the internet or by email is totally inadequate. There are also many who do not have access to the internet and therefore have effectively been excluded from the consultation – neither having access to the consultation documents or the virtual exhibition.</p>

Publicity by Dacorum of the Local Plan and this period of consultation has been exceedingly lacking. Knowledge of the Local Plan, its consultation period, and issues debate would usually be assisted by word of mouth – neighbours talking over the garden fence, parents talking in playgrounds, social gatherings and clubs, activities meetings etc, none of which has been possible during the current pandemic and lockdown for most of the consultation period. There are still people who are only just finding out about the consultation two days before the closing date.

Therefore, this consultation has been doomed from the outset. A consultation that is the most crucial for decades due to the Governments interference on housing targets, and which will impact this and future generations. Yet, a majority of the public have not been able to comment.

QUESTION ANY OTHER COMMENT comment	<p>Please see below for my feedback on the Dacorum local plan. My address is (address removed). I would be grateful if you could confirm that my comments will be captured as part of this consultation process. I started the process of using the portal but have been forced to abandon this for simpler format of an email.</p> <p>I attended the full DBC Council Meeting on Wednesday 24 February and listened to all the Councillors who spoke. I believe that DBC as a whole is doing an injustice to the people that they represent. Given that this plan is for 18 years it would seem obvious to all sensible people to have a proper consultation during a time when we are not constrained by government lockdown due to COVID 19. There is much in the plan which I don't fully understand in terms of technical language. It is a pity that there hasn't been more time to enable proper discussion.</p> <p>Some of the Councillors' double handed arguments of wanting enough evidence to respond to the UK government on their disapproval of the scheme (which they drafted) along with their refusal to extend the consultation or delay it until an appropriate time is conflicting and an obviously circular argument. The portal is obscure, unwieldy and difficult to navigate.</p>

QUESTION ANY OTHER COMMENT comment	<p>The public debate which would normally have given opportunities to scrutinise these proposals in detail has not been possible. The use of the internet and virtual meeting is not real alternative to public debate. It also excludes those who do not have access to the 'net'. The limited debate which has taken place has given ample evidence of the extent of public opposition and there is a deep rooted conviction that these proposals are being forced through with scant regard for the democratic process.</p>

The current situation is unique and without precedent for upwards of twelve months much of society has been under lockdown, with many working from home. If this were to continue on a significant scale the scale of development in the South-East would be significantly reduced.

Forecasting the future form of society is difficult at any time, at the present it is distinctly foolhardy.

Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking *into* consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

QUESTION ANY OTHER COMMENT comment

Regrettably, the Borough Council seems to consider that the Green Belt is open land ripe for development. This is contrary to Section 13 of the National Planning Policy Framework: Protecting Green Belt land. The Green Belt has been designated for a reason - 5 reasons to be exact and all of them have been blatantly ignored by the Council. It is not a sufficient argument to claim that the housing numbers must be met, especially as the government is reassessing the housing targets and the spatial location of new housing.

The Plan is also contrary to the Governments aims in Sn15 of the NPPF: Conserving and enhancing the natural environment.

para 170. Planning policies and decisions should contribute to and enhance the natural and local environment by:

(a) protecting and enhancing valued landscapes, sites of biodiversity.....

(b) recognising the intrinsic character and beauty of the countryside, and the wider benefits from natural capital and ecosystem services - including the economic and other benefits of the best and most versatile agricultural land, and of trees and woodland;

(d) minimising impacts on and providing net gains for biodiversity,....

(e) preventing new and existing development from contributing to, being put at unacceptable risk from, or being adversely affected by, unacceptable levels of soil, air, water or noise pollution....

Para 172 states: great weight should be given to conserving and enhancing landscape and scenic beauty in National Parks and Areas of Outstanding Natural Beauty, which have the highest status of protection in relation to these issues.....

The Plan pays scant regard to the conservation of the natural environment and certainly doesn't enhance it! Development on the scale and in the locations proposed will severely damage the CAONB (possibly National Park).

QUESTION ANY OTHER COMMENT comment

The current situation has highlighted just how important open spaces are to the health and well-being of people and the loss of so much in Dacorum, especially around Hemel Hempstead, is totally unwarranted. As stated in NPPF, housing need alone is not an exceptional circumstance to allow such excessive loss of Green Belt land and such intrusive development. Around Hemel Hempstead alone some 392ha of Green Belt will be lost on the north side where there are 3 blocks of land proposed for development despite Dacorum itself acknowledging that this is an area of high landscape sensitivity.

The Plan promotes more and more development with scant regard to the effect on the existing settlements and residents. It is just a matter of development at any cost and the housing numbers maximised on every site regardless of the character of the area or constraints on the sites.

Somewhat ironic that in virtually every development site it is stated that it will provide open space - whilst building on open space and providing less! Extremely vague on how the public are to gain access to this 'manufactured landscape' instead of being able to enjoy the existing natural environment.

Given climate change has led to extremes of weather conditions and has increased the risk of flooding, no development should be provided on flood plains or land liable to flood.

The Plan claims to be sustainable, but the majority of the large-scale developments are located on the outskirts of the main towns some considerable way from existing facilities and transport hubs, resulting in more traffic, congestion on existing roads, disturbance, noise and pollution. Given the location of the town centres of Hemel Hempstead and Berkhamsted in the valley floor, walking and cycling is not an easy option and there is little or no public transport to these areas.

Major infrastructure investment seems to be targeted to the Hemel Hempstead Garden Communities proposal with little thought to the wider implications that this will have on the surrounding areas which are predominantly rural in character and within the CAONB. Again, it is car - driven with a proposed new link road which has effects on a wide area including the CAONB. However, with the changes in work and living styles, this approach is outdated and contrary to the government's climate change strategy. There is also some doubt about this development following the postponement of the St Albans Local Plan.

To conclude: the Campaign for National Parks states that the government revealed a commitment to create new National Parks, one of which could be the CAONB. They recognise the value to the nation of open space and the key part it will play in a '*green recovery*'. Therefore, there should be a pledge to protect and enhance local green spaces not wantonly destroy them by promoting excessive and unnecessary development.

As the Open Spaces Society in their 'Vision for Planning' has stated: '*Government, Local Authorities and our communities must all work together to provide everyone with access to good quality greenspace closer to home, a vital element of a green recovery following the pandemic.*'

Dacorum, in its rush to publish a Local Plan, has ignored not only the government's questioning of its own housing numbers but also the effects of the pandemic which has changed how everyone lives and the necessity to combat climate change which will not happen with excessive and poorly planned development. The Plan is premature, contrary to the policies in the NPPF, is severely damaging to the environment including the CAONB and consequently on climate change. It is a disastrous plan to both the environment and the existing settlements, it is clearly unsound and should be either radically changed or withdrawn.

QUESTION ANY OTHER COMMENT comment	<p>People without good access to the internet and without a computer have been disadvantaged and excluded from this consultation as libraries are closed (to view the consultation) and to respond (responses seem to require web access/email).</p> <p>There have been technical difficulties which discourage engagement. I have asked for a password reset for the portal four times now, and I am still waiting to receive it. Hence I am emailing my comments instead.</p> <p>Draft Dacorum Infrastructure Delivery Plan (Nov 2020): https://www.dacorum.gov.uk/docs/default-source/strategic-planning/dacorum-draft-infrastructure-delivery-plan---november-2020.pdf?sfvrsn=a2cf0c9e_8</p> <p>Berkhamsted and Tring Transport Strategy (Apr 2020) https://www.dacorum.gov.uk/docs/default-source/strategic-planning/berkhamsted-and-tring-sustainable-transport-study.pdf?sfvrsn=42ce0c9e_4</p> <p>Given how extensively the draft IDP is referred to throughout the Plan, it is ridiculous that no link was provided to enable residents to review it to get the full picture. Even after I had found the Draft IDP, I was still unable to evaluate the full detail of the proposed infrastructure provisions, as</p>

locating a copy of the Berkhamsted and Tring Transport Strategy document. These documents should have been provided in the supporting consultation documents.

I would like to state that Northchurch is a village (we have a parish council) and we are not merely an “urban area” of Berkhamsted as stated in this Plan. The fact that Table 1 in Section 6 does not include Northchurch under 'villages', is an omission.

Similarly, to state again, the numbers from Central Government this consultation is based on are wrong. I do not have time to find the relevant bit in your evidence base to prove this point, which was made by your ruling party Tory councillors in the full council meeting on 25 February 2021. The point has also been made by LibDem councillors and solicitors who have looked into this so I am confident to base my objection on it.

I have just learned that the Council will treat the pre-printed feedback form from Thakeham developers, which people just need to sign and date and send back, with equal weight as the responses received in the portal. It took me several hours to make my objections while it would have taken me 2 minutes to send an approval. Therefore I believe this process is unfair as it encourages positive responses and discourages negative ones.

Lastly, I question whether during a pandemic and through lockdown was the best time to hold this consultation. Many people are busy at work, home-schooling, ill with Covid, have lost loved ones, are not coping and shouldn't have been expected to deal with such an important consultation on top of all that.

QUESTION ANY OTHER COMMENT comment	<p>The Plan is based on a flawed assessment of future housing need, and this assessment is excessive. This and the suggested level of other development disregards the impact on the environment, infrastructure, climate change and biodiversity, and would cause significant harm to the Green Belt and the AONB. It also jeopardises plans, currently being discussed, to potentially extend the AONB or upgrade its status to that of a National Park.</p> <p>The Strategy also fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents. Regeneration of previously developed land would reduce the intake of greenfield land.</p> <p>The Plan is not sustainable, in many respects. It contravenes NNPF with regard to environmental concerns and statutory protection duties. This and the problems of water supply and waste water disposal necessarily limit the degree of development that can be allowed. DBC must revise its ambitions.</p> <p>It is not sustainable to aim for ever more commercial and industrial growth and massive increases in housing in the area. This must be recognised. Other parts of the country need development and appropriate housing, to make society fairer.</p>

QUESTION ANY OTHER COMMENT comment	<p>Having lived in this town my entire life I have witnessed the removal and deconstruction of practically all of the best adult/family entertainment venues in this town - the Pavillion, countless pubs that hosted live music as well as social clubs, nightclubs, bars, arcades, swimming centres, bowling, pool halls, Quasar, and many others. To compound this, the population has grown significantly already and the residents are feeling it.</p> <p>Not planning to provide social activities for residents is highly detrimental to people's mental, physical and social health. Planning to increase the population of the borough by an additional 50,000+ people without planning for these improvements will compound this issue even further. Residents need to be provided with a wide variety of options for things to do. There's only so many times you can go for a meal and head to the cinema.</p> <p>High streets should no longer be focused purely on shopping, which is being driven out by online shopping, and instead should offer a range of entertainment venues for residents. This will provide jobs and bring high streets to life. Entertainment venues should be suitably sized. The Old Town Hall has a capacity of around 100 people. This is not suitable to cater for a growing town which will soon have a population to rival cities. Entertainment venues can cater for local groups such</p>

as amateur dramatics, local music festivals, open mic nights and then have the potential to draw in larger acts in terms of comedians, musicians and bands, theatre productions, etc.

After COVID, people will be craving and valuing these facilities more than ever before.

Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite.

Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.

Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.

All new buildings should be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets and store and re-use grey water. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.

- The 40% minimum affordable homes objective should be enforced across the Too often developers in the past have been allowed to waive their affordable homes commitments.
- Trees and woodland are very valuable to the environment and the community's physical and mental I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, any new major development area.
- An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife
- Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.

- The Local Plan should allocate land for new allotments for resident of new homes as well as laying out gardens to support 'Growing your own'(which is both sustainable and good for mental health)
- Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

Additionally, some people that I know received a leaflet through the door regarding the local plan. However, an equal amount of people I spoke to did not receive this - it is suggested this is picked up with your distribution company!

Thank you for the provision of information regarding the Draft Local Plan.

This enables the local community to consider and engage in the future of what it wants it to look like and to be a place to live healthily and happily in. As I observe this broad based engagement, DBC is now equally obligated to actively and directly respond to this by accepting the views of the local community.

As this is an engagement, my view is that this requires a significant rethink and next time, to start with a fully documented plan to first address what is missing here.

QUESTION ANY OTHER COMMENT comment	I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

QUESTION ANY OTHER COMMENT comment	<p>Whilst there has been considerable effort in the plan's production, BHL is concerned that it is not sufficiently succinct and a number of its policies are too lengthy. For example, some policies attempt to address multiple key issues and are therefore overly complex; in contrast to the objectives of NPPF paragraphs 15 and 16. To reduce the plan's size, it is suggested that DBC undertake a review of the plan's supporting text to ensure that it only includes that information that is relevant to the plan's interpretation.</p>

QUESTION ANY OTHER COMMENT comment	I have spoken to my contacts across party political divides and from those living on benefits to the most well heeled in our community, in Tring, Hemel, Northchurch and Berkhamsted, all have expressed concerns over the consultation

process during this pandemic (none heard of the proposals from Dacorum Borough) and the scale of the proposals which are out of proportion to the local housing needs.

This Consultation is to listen to the local residents, I trust that you will take our views and concerns into account as the plan is finalised.

QUESTION ANY OTHER COMMENT comment

I am writing to you both as a local resident and as someone concerned with the regional and therefore national implications of the impact of these proposals on our natural infrastructure and biodiversity.

I have lived in Berkhamsted and Northchurch for over 50 years and so many of my points address specific issues here but I know, through my connections elsewhere in Dacorum, that many of the issues are true for Tring and Hemel too.

I am a local naturalist and volunteer recorder for Butterfly Conservation, BBOWT, HMWT and the National Trust specialising in entomology.

I agree a local plan is needed and that Dacorum needs to change to meet future challenges, but this should not be by simply expanding the urban footprint at the expense of the ever decreasing natural and seminatural green infrastructure which supports our biodiversity as well as our physical and mental health and wellbeing. There are other more creative solutions that need to be sought and investigated.

The Consultation Process

I have spoken to well over a dozen people in Berkhamsted, Northchurch Tring and Hemel and none have received notification from Dacorum Borough Council of the Proposed Local Plan, none have received the brochure and so were

unaware of the consultation deadline. For many my contact has been the first they had heard of it. Others had heard by word of mouth, all were shocked at the scale of the proposals for housing.

Covid 19 has put so many people under pressure, many people simply do not have time to make the response they would wish to, I know households who do not have the appropriate technology to view the on-line documents and cannot access the local library even when it is open and so cannot make the depth of objection they would want to.

I therefore believe that the Consultation Process for the Local Plan has been inadequate and that the number of responses will not be representative of the views held in the Community. It should be stopped until the pandemic allows a fairer consultation to take place.

You cannot assume that people not objecting assent to the plans when so many people have not been informed of the consultation.

QUESTION ANY OTHER COMMENT comment

Finally, I feel there has been a deliberate lack of consultation of the development plans within the local community. Barriers have been created by the national lockdowns in terms of information relating to the proposals being readily accessible – especially to the elderly and vulnerable members of the community – and this has not been taken into account. Those that are not digitally competent or able to access means of digital communication have been restricted in their opportunities to express their views – surely this compromises the Dacorum Borough Council commitment to equal opportunities and inclusivity?

I fear that pursuing these ill thought proposals will have a catastrophic and irreversible impact on the town of Berkhamsted, it's people and community, and the magnificent countryside that we are fortunate enough to be able to immerse ourselves in and urge you to consider alternative redevelopment opportunities instead.

QUESTION ANY OTHER COMMENT comment	Failing to change the DBC Local Plan to take account of these objections, will render many consequent planning actions to be open to judicial review, delaying action, incurring huge cost and generally wasting time, money and effort that DBC can ill afford. The strength of local option and the weight of objections should cause DBC to pause, reconsider and update its plan based on up-to-date and more relevant data. DBC should listen to its residents and push back on the Government's housing targets for our area, making the legally valid case that these targets are based on the wrong data.

QUESTION ANY OTHER COMMENT comment	<p>9.1 Scale</p> <p>The potential of an almost tenfold increase in houses in Great Gaddesden Parish is incredible. The Parish is well spread out with a number of hamlets as well as the village centre housing the Church and War Memorial. The impact of this development on the existing community is not properly considered by the Plan. Great Gaddesden has an interesting and valuable historical heritage.</p> <p>9.2 Traffic Movements</p> <p>Very little consideration has been given to the traffic movements of those who would live in the Garden Community. Where the people will travel to work , to school and for recreation. For example there are significant employment opportunities in towns like Leighton Buzzard, there are village schools in Great Gaddesden and Gaddesden Row and those who want to head North on the M1 may well choose to travel along the B440 to the road linking up to the M1 at junction 11A so avoiding Junctions 9,10 and 11. All bringing very significant travel through the Valley.</p> <p>The Water Meadows in Great Gaddeden are attracting the Dog Walking businesses. No doubt a proportion of the population in the Garden Community would have dogs and so will travel into the AONB for this. This is just one of many reasons why those living in the new developments would travel into or through the Gade Valley.</p>

9.3 ANOB

For many reasons the increased population envisaged by the Plan will go into the Upper Gade Valley and so bring pollution in all its forms. Pollution which will damage the river, the many forms of wildlife and the varied flora. This area is favoured by walkers who use its many footpaths. It is already almost overwalked.

The increased population would bring about increased events taking place in the countryside and so cause damage

The Society believes the impact will result in what is now an AONB no longer qualifying for that status.

9.4 Brexit & Coronavirus

The impact of both Brexit & the Coronavirus Pandemic are of course not considered but they will need to be in the future so that a better solution can be found which will preserve our countryside but meet housing needs.

QUESTION ANY OTHER COMMENT comment

This Draft Plan is of huge importance to the development of Berkhamsted and Dacorum. It should be delayed because although available on-line many people are unaware of these new plans and their implications. Past consultations have included local exhibitions and planning meetings.

To proceed would be to disregard and evade the democratic consultation process under the guise of a global pandemic.

QUESTION ANY OTHER COMMENT comment	It appears a lot of work has been done on the plan with lots of studies and philosophies developed over the years. It has been a great money-spinner for a few, I'm sure. Whereas I'm in agreement that a planning policy is required (I have lived in Houston, Texas, where there is no such plan), I find the extrapolation of housing and business requirements and needs into the future to be just so much guesswork.

The current pandemic has changed work and living attitudes as has the increase in internet use for working, shopping and commercial transactions. There are likely to be some major changes in the demand for housing and commercial buildings and on the demand on infrastructure following the pandemic. The assumptions made twenty, fifteen, ten and even three years ago are not likely to be valid in the near future and certainly not further ahead.

This strategy needs to be reconsidered in 2022 before any action is implemented.

QUESTION ANY OTHER COMMENT comment

As mentioned previously, the Plan is not up-to-date and has not taken into account the negative impact of doing this consultation during a pandemic. A revised Local Plan needs to be put forward for the community to comments upon.

Dacorum is supposed to represent all its residents - relying on everyone having access to IT is fair. Relying on everyone's IT skills being sufficient to navigate your documents and form filling process is not fair.

If you truly represent all those living and working in Dacorum and particularly during this last year, access to this very important consultation should be all inclusive ie proper clearly written documents mailed out to every single address in Dacorum. We only received your brochure on 23 February after I had raised a complaint through your complaints system. Strategic Planning replied naturally detailing all the online ways I could access said documentation but at no time was there a reason given as to why many streets had been left out of a very important mailing. If you are going to use the reason of the recent pandemic, then Dacorum should appreciate that every single resident has reason to use the pandemic as the reason why they have not been able to access, evaluate and respond to the Local Plan.

QUESTION ANY OTHER COMMENT comment	<p>Whilst reasonably familiar with all of the proposed sites (pages 299 to 314 of the consultation document), I walked past all of the sites this morning so most of the comments are current.</p> <p>I am a chartered Civil and Structural Engineer still currently practicing. This note will cover the following items:</p> <ul style="list-style-type: none"> • General Comments on the presentation of the information and the timing; • General Comments on the Proposals; • Comments relating to specific sites where there are important issues that need to be commented • Summary <ol style="list-style-type: none"> 1 The maps that have been produced in the documents are of very poor quality and when printed out on A4 sheets (as the document is formatted), many of the important features and buildings are not clear. It is very difficult to identify key buildings such as Ashlyns School, the British Film Institute, etc. Even walking past the sites this morning, it was very difficult to ascertain the exact areas where works are 2 Unless you are actually on site it is impossible to recognise street names from the drawings. 3 There are sites that are part hatched in green, whereas the entire piece of ground is of the same use, which in most cases is farmland. 4 Each of the proposals are very site specific and there is no clear indication that there are sites immediately adjacent to them that form part of these proposals. It is not clear why these are not combined as in combination, the infrastructure to support the site in terms of road layouts, services, etc., might be more 5 A couple of sites have no direct access to roads. 6 The are areas that are clearly 'woodland', but these are not distinguished from 7 There are areas on the plan that are shown are undeveloped, but in reality have houses being built upon them or are currently being built upon. 8 In each area it simply states 'around XXX dwellings, subject to masterplanning'. Very little information is given what form those dwellings may This needs to be clarified. 9 The term 'masterplanning' in this context is very vague. What does it actually mean and to what level of detail will be required?

- 1 I am not aware when this information entered the public domain, but the amount of information that is required to be read and absorbed is extensive and a significant of time ought to have been allowed for this.
- 2 Lack of a local press or notifications by way of flyers means that there is very little knowledge about the existence of these proposals. I do not use or rely on social media in any shape or form and would be disappointed if this was the primary means of communicating this
- 3 The information has been issued in winter and hence it is more difficult to get out and view the sites.
- 4 We are in the midst of a pandemic and understandably we cannot have meetings, etc., where these items where these items can be presented by the Council and debated. This process ought to have been delayed in order that formal consultations can be held.
- 5 The document relates to around 2500 dwellings proposed in Berkhamsted. It does not seem to mention the proposed development that has been pulled together by Thakeham and Berkhamsted Sports Ground Charitable Association. This information was distributed in Berkhamsted by way of flyers in the last few months. These proposals are not included in the Dacorum Plan. They relate to a section of land to the east of Hall Park up to near Bourne They propose around 1100 houses.
- 6 In the light of item 14 above, are we talking about 3,600 dwellings?
- 7 Given the impact on what has happened during the pandemic and the way people work and commute are the figures that are being looked at still relevant. Have they been reconsidered in the light of what has happened in the last year and what may happen in the
- 8 What research has been carried out in terms of possible changes to work patterns as a consequence of the

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

Finally, the schools, dentist and doctors in Tring are at capacity. The nearby Hospitals are struggling to cope with the current increase in housing and population in the area .

Therefore, any big developments cannot be allowed to start without the relevant support for the communities being in place.

Any developments should be based on 'real' affordability of housing for the young and less well off, and not end up being targeted mainly at the wealthy and investors.

I further feel that a pause in the process should take place to allow a proper review to be conducted when the country is open once more for post-covid

In addition, the effects of work patterns and requirements for housing after the effects of Covid and Brexit have to be taken into account once a clear view of these two major upheavals can be made.

QUESTION ANY OTHER COMMENT comment	<p>— I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown. Consequently, I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard</p> <p>— Those without access to IT have defacto been excluded from this process, given lockdown access restrictions. Lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation. It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown.</p> <p>Furthermore, it would be reasonable to expect that consultations involve public meetings where officers can explain what is proposed and answer questions</p> <p>— Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home- schooling children as well a dealing with the challenges of CV19 and lockdown</p> <p>PLEASE NOTE: Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".</p>

QUESTION ANY OTHER COMMENT comment	<p>To summerise:- I disagree with these proposals for the Local Plan and the housing numbers proposed. To build even more houses in Berkhamsted and especially along Shootersway and Kingshill Way will be disastrous! The local water supply to Berkhamsted is already on a knife edge with the existing number of dwellings - so how are you going to supply all this additional water for another 2,000 plus houses in Berkhamsted??</p> <p>These housing numbers in the Local Plan for Dacorum and therefore Berkhamsted are excessive and totally wrong. The impact on the infrastructure, increased pollution, increased congestion in Berkhamsted which is already now gridlocked at peak traffic flow times and therefore continue to give major road safety concerns. What consideration has been given to the impact on the local ecology and the well being of existing local residents - the plans would indicate that the answer is none .</p> <p>Therefore I totally disagree with the Dacorum Local Plan 2020 to 2038 and the Key Developments in Berkhamsted.</p>

QUESTION ANY OTHER COMMENT comment	<p>First, to say that I very strongly support the constructive suggestions in answer to question 9 from Tring in Transition's submission. I would ask that they are carefully read and taken on board.</p> <p>Whilst I recognise that planners are between a rock and a hard place when it comes to Local Plans in the Home Counties, it is profoundly disappointing that DBC has not pushed back hard on the Government's insistence on maintaining the out of date 2014 population projections as the basis for calculating housing requirements. Had that been done, much of the anger generated by this Plan may well have been minimised.</p> <p>I have tried to be constructive in my comments, but am left feeling that despite many well intentioned, and welcome, positive intentions, the Plan seems very much to be developer-driven. I had hoped to be excited by vision and ambition, but am left disappointed.</p> <p>Hope remains!</p> <p>However there is still hope, both regarding Tring which carries a disproportionate burden which will generate gridlock, and regarding Dacorum generally.</p> <p>How?</p> <p>For Tring, by adopting the "Vision" approach advocated by Barr Kazer and reproduced earlier in my comments.</p> <p>For Tring and Dacorum, by involving local communities in developing the Design Plans for their communities rather than presenting fait accompli drawn up by consultants. That would both address the "distinctive development" referred to in Plan, and also go some way to restoring the faith of people in process.</p>

<p>QUESTION ANY OTHER COMMENT comment</p>	<p>I am a long-time resident of Berkhamsted and responded to the 2017 Consultation, with comments of concern, including support of homes location option 1B. I know many fellow residents made the same choice and was surprised and disappointed that this was not reflected in the proposals on which the new consultation comments are invited.</p> <p>Please accept this letter as my only comments on the matter; I commenced the on-line version but would prefer my response to reflect only the Berkhamsted situation, which I know well.</p> <p>OVERALL POSITION</p> <p>Firstly, may I add to the many voices, who have asked DBC to abandon the current process, for the following reasons:</p> <ol style="list-style-type: none"> 1 The Covid lockdown has not allowed residents to follow fully the thousands of pages of the (at last) published data, nor to consult in any meaningful way with Planning Officers, local Councillors and other local associations. 2 This will surely result in the response levels being so low that they will not represent public comment at an acceptable sample level. 3 The huge changes in the central Government's housing number parameters make the target objectives meaningless. Worse, the current process simple allows developers to "line up" included sites for their own planned use, either inside or outside the Local Plan. <p>The argument, that the present process has cost a considerable sum, which would be wasted if abandoned, is not a good reason for continuing on the wrong path. The cost, versus parts of the Borough having a completely unacceptable planning future, are meaningless.</p>

<p>QUESTION ANY OTHER COMMENT comment</p>	<p>Firstly, I wish to object to how the "public consultation" on the Local Plan has been conducted by Dacorum Borough Council. The proposal to build nearly 17,000 new homes in the area has not been widely published by DBC. I live in</p>
--	--

a terrace house on a road in Berkhamsted that is in one of the areas where house building is proposed to occur directly behind my property. I have had no direct communication from DBC at all, no leaflet, no letter, no email, nothing.

We are in the middle of a pandemic where gathering together face-to-face is virtually impossible. Only those with access to social media and virtual meeting technology have had any chance of discovering these momentous plans to change our borough. This has disenfranchised and disadvantaged huge sections of the population of Dacorum. Also, due to the pandemic the community has been focussed on surviving: COVID-19 health related challenges; isolation, unemployment, home-schooling; to mention just a few. DBC appears to be taking advantage of a distracted populus to slip these development plans past us without due scrutiny. Your own publicity states that these changes will affect the area for generations. How can you do that without allowing the community to have a proper say on what happens to their local area, THEIR HOME.

QUESTION ANY OTHER COMMENT comment

Having lived in this town my entire life I have witnessed the removal and deconstruction of practically all of the best adult/family entertainment venues in this town - the Pavillion, countless pubs that hosted live music as well as social clubs, nightclubs, bars, arcades, swimming centres, bowling, pool halls, Quasar, and many others. To compound this, the population has grown significantly already and the residents are feeling it.

Not planning to provide social activities for residents is highly detrimental to people's mental, physical and social health. Planning to increase the population of the borough by an additional 50,000+ people without planning for these improvements will compound this issue even further. Residents need to be provided with a wide variety of options for things to do. There's only so many times you can go for a meal and head to the cinema.

High streets should no longer be focused purely on shopping, which is being driven out by online shopping, and instead should offer a range of entertainment venues for residents. This will provide jobs and bring high streets to life. Entertainment venues should be suitably sized. The Old Town Hall has a capacity of around 100 people. This is not suitable to cater for a growing town which will soon have a population to rival cities. Entertainment venues can cater for local groups such as amateur dramatics, local music festivals, open mic nights and then have the potential to draw in larger acts in terms of comedians, musicians and bands, theatre productions, etc.

After COVID, people will be craving and valuing these facilities more than ever before.

Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite.

Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.

Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.

All new buildings should be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets and store and re-use grey water. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.

- The 40% minimum affordable homes objective should be enforced across the Too often developers in the past have been allowed to waive their affordable homes commitments.
- Trees and woodland are very valuable to the environment and the community's physical and mental health. I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, any new major development
- An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife

- Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.
- The Local Plan should allocate land for new allotments for resident of new homes as well as laying out gardens to support 'Growing your own'(which is both sustainable and good for mental health)
- Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

Additionally, some people that I know received a leaflet through the door regarding the local plan. However, an equal amount of people I spoke to did not receive this - it is suggested this is picked up with your distribution company!

QUESTION ANY OTHER COMMENT comment

- 1 It is considered totally inappropriate to carry out this consultation during the social restrictions imposed by Covid-19, with the resultant lack of easy access to proposals and Council staff to question the plan's thinking and detail.
- 2 Admirable though the plan and all the associated online materials may be, they do not lend themselves to adequate and widespread public interrogation and expression of opinions and comments.

3 Finally, I repeat my view and request that this consultation be delayed until Covid-19 restrictions have been relaxed, allowing a more complete view to be taken and expressed by a larger section of the affected population.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship

with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

The pandemic has proved more than ever before the need for space, countryside and for dispersing people away from congested housing. Why then would you create the very style of development that would bring people into an increasingly crowded area. The increased use of Ashridge, canal footpaths and - when open - College Lake means even with the current population the precious wildlife and vegetation is under pressure.

This Plan should be reviewed wholesale in the context of the massive changes to the way we work and live that have been brought about by Covid 19 and the shift to online commerce and home working. Increasingly large town centres like Hemel and Watford are left vacant, inciting vandalism and a feeling of decay that seeps into how the people around those areas see and treat them. Why not radically redevelop these areas - already built on - into innovative, new, eco-sensitive living centres that help us lead the way in future planning and living.

QUESTION ANY OTHER COMMENT comment	<p>The council have carried out a sham of a consultation, of massive importance for the people of Northchurch, where there are many, many elderly people living. You are well aware that these people do not have use of the internet or email – I know that for a fact, and you have not enabled them to consult with you, and frankly the legality of this should be looked into. You cannot possibly claim you have carried out a proper consultation. You have deliberately excluded people who care about Northchurch. If you had taken the time to canvass local residents by having meetings in a local hall, and boards showing what you want to do, then local elderly people could have been taken to those meetings, and been given forms to sign, yes if you agree, no if you don't. It has been a completely inadequate consultation period, with absolutely no inclusion of a vast number of the local population. The Council should be ashamed. It is riding roughshod over the elderly people who have lived here for many years, and potentially their ancestors for hundreds of years. These are the people who have contributed to the economy of Decorum for years, but you simply do not care about these people.</p> <p>You have launched this so called consultation at a time when people cannot get out of their houses, when parents are up to their eyes homeschooling their children. You have been told by Lara Pringle of the very high number of people</p>

who have not even been aware of these plans. This pandemic has caused so much stress to people, who are trying to work, or even worse, looking for work because they have lost their jobs, and you expect to thrust this massive consultation on people who are already at the full capacity of stress and worry.

In a letter from the Department of Communities and Local Government, dated June 2016, the then Minister of State for Housing and Planning, Brandon Lewis, states that:
 “..... Green Belt boundaries should be adjusted only in exceptional circumstances, through the Local Plan process and with the support of local people." I am sure the weight of evidence you will receive to this consultation will prove that you do NOT have the support of local people. In the same letter the Minister states: "We have been repeatedly clear that demand for housing alone will not change Green Belt boundaries". However, it is very clear from this consultation that the proposed Green Belt releases are driven entirely by the requirement to allow the development of more housing across the Borough.

The fundamental aim of the Green Belt policy is to contain urban sprawl by keeping land permanently open; essential characteristics of Green Belts are their openness and permanence. The council's plan would shatter the Green Belt in this area of Tring destroying the openness and permanence of the beautiful countryside. Once destroyed it cannot be restored. There are alternatives that should be considered.

I also think that the consultation should be delayed because it is impossible to canvass opinion during a global pandemic. It is not a proper and fair consultation.

QUESTION ANY OTHER COMMENT comment

This is a comment I want to relay to you from a town resident, who posted this on the nextdoor.com website just now. My reason for re-posting it here is because I agree with her about the lack of appropriate means by which to engage people in these important decisions. Whatever is being done currently isn't working and needs to be re-considered.

"Whilst I think that a number of you who have bothered to join a site like this would have an interest and care about your neighbourhood...I would be surprised if many other people would have taken the time to complete it. Not that people wouldn't have wanted to but.... !! I have to admit ...I am exhausted and if you have spent your working life in a practical role then one may not be used to long, very long and "wordy" reports and papers !! I could just about make out the language used for such a strategic programme of growth. I wonder how many "everyday people" who really do care about there community would read it and complete it (it has taken me 5 hours) and it would appear that not many even knew about it.

(My cynical side would probably comment but I will not..i'm too tired !!)

However one proposal close to home was a proposal to build 30 news homes on the Smith coffee site in Ebberns road !!! OMG if that road is not hard enough to get down and lack of parking. The parking allocation for new developments (yet another paper you had to read) does not provide, in my opinion, adequate parking allocation, so the existing residents of Ebberns road, most of whom live in Pre war cottages, so no driveways and very limited parking now, Congratulations there is a proposals of 30 new homes !!! Me thinks a petition is in the pipe line --it needs a residents Carpark not more flats in a AQMA's zone (breaching pollution levels) and 30 extra cars trying to get down the road and sit in the congested

Durrents Hill Road due to one lane traffic lights ...who decided that was a good idea...I think that needs to change too...or am i just being a very moany minnie today ? I dont want to be ..I know we have to see a future growth, but I wish they could make it so the people of the town who have to live here, really do get a say and don't make it so difficult - and then go ahead with decisions that really negatively impact on the well being of peoples lives...Thank you dear neighbours for bearing with me while I let off steam !!! hope you all had a lovely weekend ..Sunshine yeahhhhhh!!!!"

It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

***** ADDITIONAL COMMENT: *****

It is not just and right that landowners – some who have strategically purchased farmland with a view to a ridiculous financial windfall as Green Belt is destroyed – build on every square foot of land that was the Green Belt, a national treasure that isn't supposed to be built on. Why should the community lose everything and the land owner gain everything in the destruction of Green Belt and our community's environment?

This process should not be considered a case of "winner takes all" - that in the event decision to build housing surrounding Tring in Green Belt, then it's just tough luck, Tring lost and loses its rights to the beautiful Green Belt environment and fine small community we had.

I would propose that, in the event of housing being forced upon us, then new housing should not be right in the faces of existing roads and houses, but more sympathetically and tastefully buffered by being placed behind wooded areas of trees – perhaps at least 30m deep. This would create a far better environment and be fairer to those who either live close to or directly facing Green Belt that is being corrupted. Yes, this would enable a lower density of new housing and smaller landowner windfall, but it would be far more reasonable and appropriate to the situation and create far less of a feeling of urban sprawl that we all dread.

QUESTION ANY OTHER COMMENT comment	The Council seems to take the view that national needs for housing happen to be identical to our local needs. This could not be further from the truth. Our local needs in Berkhamsted are being met, at only half the level of building that is now proposed, and the statistics have had to be grossly distorted to produce the 922 figure. Dumping such an excessive level of housing on the Berkhamsted area cannot be excused by any pretence that it is needed.

QUESTION ANY OTHER COMMENT comment

Our client has interest in land at Land off Pea Lane, Northchurch, Berkhamsted, Hertfordshire ("the site"), which our client continues to promote as a potential residential allocation in the Dacorum Local Plan (2020- 2038).
Representations have been made by our client (under the name of Linden Homes, now part of Vistry Group, following a merger in January 2020) to previous stages of the preparation of the Dacorum Local Plan (2020-2038) including the Issues & Options consultation and Call for Sites held in 2017.
We have set out in this letter the context of our client's representation to the Emerging Strategy for Growth consultation.

Vistry Homes Ltd object to the Emerging Strategy for Growth of the Dacorum Local Plan (2020-2038) as currently drafted for reasons set out below in this letter. Our client has significant concerns with the approach to establishing the housing requirement in the Local Plan and the implication for housing land supply.

Our client also has significant concerns relating to the lack of site assessment as part of the Council's site assessment for housing allocations and we object to the Council's conclusion that the site is considered unsuitable for further consideration for proposed residential allocation, based on the Council's justification that the site is located wholly within the AONB (Area of Outstanding Natural Beauty).

QUESTION ANY OTHER COMMENT comment

Berkhamsted Citizens Association is committed to the conservation of the historic built environment of Berkhamsted. This includes Northchurch, its internal green spaces and the retention of the surrounding and integral Green Belt which protects them.

Green Belt is the single most important buffer against the coalescence of settlements, the erosion of which will threaten Berkhamsted's distinctive and discrete nature if this Plan is adopted as it stands.

We have been working with the '**ONE VOICE**' ALLIANCE and together we make the following statement ...

ONE VOICE ALLIANCE

- 1 ***Whilst the policy on biodiversity is clear, the emerging plan is not explicit enough in terms of how Dacorum Council will work with developers and other stakeholders to mitigate Green Belt loss, increase biodiversity and meet National and Hertfordshire's goals for climate change and carbon reduction***

1 ***A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and away from areas located in the Green Belt (which should only be used in exceptional circumstances) and the Chilterns AONB and its setting.***

QUESTION ANY OTHER COMMENT comment	<p>Overall the plan is unambitious, unimaginative and outdated, it does not offer any distinctive vision for Tring. As it stands it will completely change the character of the town for the worse and result in the loss of highly valued wildlife and greenspace.</p> <p>The proposed increase in housing numbers (over 2700) are not justifiable for Tring. Numerous local groups have produced evidence on required housing numbers which should be used to push back on the government. Dacorum should be fighting to protect the things which make it so special, it's countryside and historic towns, instead of readily giving it all up to developers.</p> <p>Development on the Green Belt should be an absolute last resort. If development is to happen the plan needs to be much more ambitious and determined in protecting and enhancing remaining areas and mitigating the impact on those areas which area developed.</p> <p>I would like to also add a general objection to the timing and way in which this consultation has been carried out in relation to the Covid pandemic. I appreciate these are difficult times but I feel strongly that the council should have postponed the consultation until restrictions were eased to enable face to face consultation events, physical displays for people to visit and to ensure people have the time and headspace to address such an important issue.</p>

QUESTION ANY OTHER COMMENT comment	<p>This Plan is at once “planning-risk averse” and yet opens boulevards of opportunity for developers to pave. It amounts to a belt and braces approach to the downside – give up the greenbelt to the builder, and brace yourself for the heights, downtown!</p> <p>The consultation has failed because of the Covid lockdown. A reasonable benchmark for a consultation this important and far-reaching must be 20% of the adult population; this would be 25,000.</p> <p>This consultation is a step in the production of Dacorum’s “Local Plan”, but it has been presented as the “Emerging Strategy for Growth (ESfG). It appears obvious that many, many residents are essentially both reasoning as averse and in some cases flatly averse to growth, especially if it affects their personal situation and micro-location. This is understandable and while flat rejection of growth is not helpful, reasoned opposition must be examined and in many cases I believe it should be proactively presented by the Plan, with caveats and consequences when it is re-consulted at regulation 18.</p> <p>The pandemic-constrained engagement with non-digital-using residents, combined with the change of numbers from the Government, and the sheer unsustainability of these numbers, given the Climate Emergency mean that a new regulation 18 consultation will be necessary, for the Plan to achieve support or acceptance from residents.</p> <p>Indeed this regulation 18 consultation would have benefitted residents by setting out, in greater detail, the quality of all candidate sites, scored (with a score able to be varied by consultees) according to accessibility, and quantified value or cost to health, wellbeing and cohesion.</p> <p>Objectively Assessed Need</p> <p>The National Planning Policy Framework requires that all planning authorities prepare Local Plans to provide housing which meets their objectively assessed need.</p> <p>1 <i>Plans and decisions should apply a presumption in favour of sustainable development.</i></p> <p>For plan-making this means that:</p> <p>(a) <i>plans should positively seek opportunities to meet the development needs of their area, and be sufficiently flexible to adapt to rapid change;</i></p> <p>(b) <i>strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas 5 , unless:</i></p> <p>(i) <i>the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area 6 ; or</i></p>

(ii) any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.

NPPF section 11

Section 60 of the NPPF suggests that the housing need is set by the standard method. However, the housing figure from the standard method for Dacorum has changed during the course of this consultation.

- 1 *To determine the minimum number of homes needed, strategic policies should be informed by a local housing need assessment, conducted using the standard method in national planning guidance – unless exceptional circumstances justify an alternative approach which also reflects current and future demographic trends and market signals. In addition to the local housing need figure, any needs that cannot be met within neighbouring areas should also be taken into account in establishing the amount of housing to be planned for.*

NPPF section 60

In November 2020 Dacorum had a standard method 'housing target' of 922 dwellings per annum. This was based on the most recent Office for National Statistics ('ONS') housing need projections, (355 per year averaged over the next ten years for Dacorum) and uplifted by an algorithm which placed import, not only on housing affordability, but also on the change in housing affordability in the last ten years. This resulted in a multiplier applied to the ONS projected need of 2.6, and overall housing target of 922 dwellings per annum.

In December 2020, Government announced that it would no longer be using this method to calculate the housing target and that it would revert to an earlier affordability algorithm. This algorithm limited the uplift from ONS figures to 1.4 x ONS figures. With the latest ONS figures suggesting that Dacorum would need 355 dwellings per year this would provide a housing need figure of around 500 dwellings per annum. However, rather than use the latest projections, Government announced that it would instead revert to the 2014 projections.

'We will continue to use the 2014-based household projections. The government has carefully considered whether to use the 2018-based household projections and has concluded that, due to the substantial change in the distribution of housing need that would arise as a result, in the interests of stability for local planning and for local communities, it will continue to expect only the use of the 2014-based projections.'

Government response to the local housing need proposals in 'Changes to the current planning system'

As the latest housing need projections for Dacorum are around half the 2014 ones (355 vs 730)

using out of date 2014 projections results in a 'housing target' figure for Dacorum of 1023 dwellings per annum. It is specifically stated that the reason for using the old projections is because there is a 'substantial change' between the old projections and the most recent ones.

Therefore, it is self-evident that the housing target produced by the standard method cannot be accurately described as an objectively assessed need.

We urge the Council to request of Government, that the best information available be used to calculate our housing target. That is, the most recent ONS figures, and the standard method (which limits uplift to a multiplier of 1.4).

If Government does not agree to alter the Standard Method across the country to reflect more recent trends, the NPPF section 60 allows for planning authorities to set their own housing need under ‘exceptional circumstances’.

It is my view that the fact that the target figure set by using the 2014 projections is not in any way an ‘objectively assessed need’, combined with the fact that providing for over double the actual required need would fundamentally fly against the UKs 2050 net zero commitment, provides this exceptional circumstance to apply an alternative approach to calculating the housing need.

It is my considered view that as such, DBC should use the latest housing projections, along with the original standard method to calculate its housing need, and update this local plan to provide for a 9,000 homes over 18 years.

It is worth noting that the reasons given by MHCLG for rejecting the complex housing algorithm (which for Dacorum gave a target figure of 2.6 x the ONS projected housing need) focused on the pressure on rural areas and Green belt.

‘In particular, we heard that too much strain was being put on our rural areas and not enough focus was on the renewal of our towns and cities.’

‘in some places the numbers produced by the standard method pose a risk to protected landscapes and Green Belt. We should be clear that meeting housing need is never a reason to cause unacceptable harm to such places.’

Government response to the local housing need proposals in ‘Changes to the current planning system’

In the emerging local plan, which uses the figure of 922 dwellings per year, it is proposed that over 750 hectares of Green belt be released and allocated for housing. If the figure of 1023 dwellings per year were used, it can only be assumed that pressure on green belt would be even greater. Great import is attached to preserving Greenbelt in the NPPF.

- 1 *The Government attaches great importance to Green Belts. The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence.*

NPPF section 133

It is also clear from the NPPF that the release of green belt can only be considered in ‘exceptional circumstances’.

- 1 *Once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans. Strategic policies should establish the need for any changes to Green Belt boundaries, having regard to their intended permanence in the long term, so they can endure beyond the plan period. Where a need for changes to Green Belt boundaries has been established through strategic policies, detailed amendments to those boundaries may be made through non-strategic policies, including neighbourhood plans.*

NPPF Section 136

We consider that meeting a housing target which cannot be accurately described as an ‘objectively assessed need’ does not qualify as an ‘exceptional circumstance’ in which Green belt may be released.

Furthermore, even where exceptional circumstances apply, green belt may only be released as a last resort.

1 *Before concluding that exceptional circumstances exist to justify changes to Green Belt boundaries, the strategic policy-making authority should be able to demonstrate that it has examined fully all other reasonable options for meeting its identified need for development. This will be assessed through the examination of its strategic policies, which will take into account the preceding paragraph, and whether the strategy:*

a) makes as much use as possible of suitable brownfield sites and under utilised land;

b) optimises the density of development in line with the policies in chapter 11 of this Framework, including whether policies promote a significant uplift in minimum density standards in town and city centres and other locations well served by public transport; and

c) has been informed by discussions with neighbouring authorities about whether they could accommodate some of the identified need for development, as demonstrated through the statement of common ground.

NPPF Section 137

We do not consider that all other options for housing have been appropriately considered in this local plan. For example, the windfall figure which is provided for in this plan is 133.8 per year. In the last fourteen years the windfall figure has been 306.2 per year on average (346 per year over the last five years). The figure for this plan period is therefore far lower than could be reasonably expected. However, permitted development rules have been widened significantly, and now include the potential to increase the height of buildings, adding flats on top of blocks of flats and adding flats on top of shops. This will likely mean that windfall figures will if anything, increase. On top of this, the pandemic is expected to cause a shift away from office space for businesses in favour of more flexible working practices and this is likely to free up more brown field space within towns all over the country, thereby taking pressure off green field and green belt sites.

According to the NPPF:

1 *Green Belt serves five purposes:*

a) to check the unrestricted sprawl of large built-up areas;

b) to prevent neighbouring towns merging into one another;

c) to assist in safeguarding the countryside from encroachment;

d) to preserve the setting and special character of historic towns; and

e) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

NPPF Section 134

Releasing the amount of Green belt proposed, is likely to prevent essential renewal of our town centres post pandemic.

Social housing need in Dacorum

Planning authorities are expected to meet their needs for different types of housing, not only the headline figure for number of dwellings.

- 1 *Within this context, the size, type and tenure of housing needed for different groups in the community should be assessed and reflected in planning policies (including, but not limited to, those who require affordable housing, families with children, older people, students, people with disabilities, service families, travellers, people who rent their homes and people wishing to commission or build their own homes).*

NPPF Section 61

There are currently over 7000 people on the housing list in Dacorum. That is over 7000 people who meet the criteria for council or housing authority housing and who have asked for it. This need is not being met adequately through this plan. The Local Housing Needs Assessment ('LHNA') for South West Herts estimated that the number of affordable houses needed per year in Dacorum is 363 and that 87% of these should be social housing. Whilst this figure may also be impacted to a certain extent by the expected decrease in growth which has caused the ONS projections for our area to reduce from 730 to 355 dwellings per year, the current need is still large.

It is our view that the Local Plan does not include sufficient allocations for affordable, or in particular social housing for the needs of Dacorum residents. Of the 922 dwellings proposed per year only 70 per year are expected to be social housing, as compared to the need for 315 social dwellings per year from the LHNA. We would like to see a third of housing delivered in Dacorum be social rented housing. A large proportion of the housing envisioned in this plan will not be affordable for our residents, but is rather aimed at London commuters, and this will do nothing to improve the affordability of housing in Dacorum.

QUESTION ANY OTHER COMMENT comment [PERSONAL DETAILS REMOVED]

I have lived in Berkhamsted for as long as I can remember, playing an active role in the community. Having studied the proposals for the local plan, I would like to comment on the nature of the consultation and details of the plan itself.

Firstly, given the significant impact the plan will have for generations I am surprised that the consultation has been held over the Christmas period and a winter where due to the pandemic we have been required to stay inside. For many, particularly the elderly members of our community this has made finding out about the plans very challenging and many are still unaware.

Additionally, many of the online resources seem incorrect. The cemetery near the Rex Cinema and one campus of the Berkhamsted school are considered open-space in the maps. Whilst this may or may not be true from a legal perspective, neither would be a suitable location for a run or picnic (whenever the latter is a viable option again). It seems to me that much of the material and campaign has been designed in an unfortunate nature.

QUESTION ANY OTHER COMMENT comment

We have identified that there is a clear need for the Council to amend the housing target in the Local Plan and to identify additional land, over and above that already identified, to meet the minimum housing need of the area.

We have also identified that the employment policies of the draft Local Plan do not accord with the intention of national policy and, that through their review, there is an opportunity to provide the flexibility to stimulate investment whilst also supporting the need to deliver increased rates of house building in the area and facilitate the efficient use of brownfield land. Without these changes, Redington Capital consider that the Local Plan is unsound.

We hope these comments are helpful in helping the Council develop the Local Plan ahead of a pre- submission consultation later in the year. If you do have any queries, please do not hesitate to contact me to discuss.

QUESTION ANY OTHER COMMENT comment	<p>The proposed, continuing encroachment on Green Belt land - an irreversible process - should be viewed as a last resort, not an easy option. The imposed housing targets can and should be challenged on the grounds of the negative impact on the environment and their non-sustainable nature.</p> <p>In respect of Berkhamsted the inevitable increase in traffic, and its accompanying pollutants, is a threat to public health and to road safety, particularly for school-children and the elderly. As a dormitory town it already sees increased traffic flows into and away from the railway station - competing with schools traffic in the mornings - and this can but increase pari passu with new housing: there are no employment opportunities of any scale within the town.</p> <p>There is a more general point to be made in regard to the Local Plan document: since it was drafted the Covid pandemic has caused massive economic and social upheaval across the whole country. The retail and hospitality sectors are among the hardest hit and it is unclear how town centres including ours will be affected in either the immediate or the longer term. In this climate of uncertainty it is less than sensible to attempt to set in place a detailed Growth Strategy spanning the next two decades.</p>

QUESTION ANY OTHER COMMENT comment	<p>These are extremely important future plans for our Borough. But you are holding this consultation at a time when the population are all locked down and completely distracted on the tough task of just keeping their family's life on the road. It is asking an awful lot of people at such a moment to study the huge number of documents involved, in order to make a meaningful response. The end of the lockdown is hopefully in sight, so it is hard to understand why you cannot delay or extend for a few weeks, in the near certainty of getting a much higher quality response from the public. The fact that you are unwilling to do so will confirm many peoples view that this is a box ticking exercise, rather than a genuine consultation.</p> <p>Your internet portal in use for this consultation is a real mess. Even the very experienced and IT savvy have great difficulty navigating it and it has single-handedly raised the average blood pressure of those responding in the Borough. Surely you can do a lot better?</p>

QUESTION ANY OTHER COMMENT comment	The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing

supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	<p>— I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown</p> <p>— I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard</p> <p>— Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT felt excluded.</p> <p>— Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home-schooling children as well a dealing with the challenges of CV19 and lockdown</p>

- The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation
- There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing
- The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT
- It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown
- People expect consultations to involve public meetings where officers can explain what is proposed and answer questions
- Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".

QUESTION ANY OTHER COMMENT comment	<p>I am very concerned that amongst the wider Dacorum community there is a general lack of knowledge about the local plan and more importantly that the consultation period for it is about to close and as such people have missed the chance to comment on their future. I only received information of the plan through the post yesterday (25th February 2021) and this is not a reasonable time period to properly review the proposals.</p> <p>Due to Covid restrictions it has not be possible to engage and inform people with events such as:</p> <ul style="list-style-type: none"> • Door to Door canvassing of the local plan consultation

- Interested parties to meet and canvas at the various town markets Covid restrictions have impacted
- Our ability to attend Council Meetings in person rather relying on access to online forums
- Residents being able to meet and consider responses to the local plan

The Government has asked all of us to restrict our interactions with the general public as it is both irresponsible and unlawful to do otherwise.

In short it feels as though the council is trying to push through this consultation period without actually consulting properly with the local residents and giving local residents the suitable platforms to obtain the required information and to consult on this matter. This has been disappointing.

I feel the strategy has failed to take account of a number of important issues or has diminished their significance, most importantly - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth should be balanced against and not override environmental concerns and climate obligations.

The definition of a General Employment Area should be updated to take into consideration the recent amendments to the Use Classes Order. The definition should also reflect the wider range of acceptable employment uses which are supported by draft Policy DM16.

Conclusions

We trust that these representations will assist in the preparation of the emerging Local Plan. Please do not hesitate to contact Nick Baker or Amy Lomath in our London office should you wish to discuss these representations or require clarification on any of the points made.

OSD reserves its right to appear at any future Local Plan Examination in support of these representations.

We should be grateful if you would continue to keep us informed of progress on the development of the emerging Local Plan.

QUESTION ANY OTHER COMMENT comment	needs to be greater recognition on the role of rural areas (whether in the green belt or elsewhere) in delivering some of the sustainability targets. Rural areas could provide better air quality, green power, increased biodiversity and carbon neutral food production.

The plan will operate in the 'post-Covid' world and will need to have cognisance that land usage has changed and this is a great opportunity to re-think the way things are to provide for all people prosperity (social foundation), whilst living within the raw resources available (ecological ceiling).

The strategy is fundamentally flawed, and therefore the plan is flawed. It is not what the country, or Dacorum, actually needs.

I was only made aware of this consultation late today so to go through detail is unrealistic. Every household should have been notified of the consultation. Residents can't respond to something we don't get notified is happening! Given the implications of this plan, the Councils approach to the consultation is unreasonable.

QUESTION ANY OTHER COMMENT comment	<p>We moved to Northchurch 15 years ago with a 6-month year old son in order to escape the built-up streets of North London. Please note that I call the area we live in Northchurch, not West Berkhamsted as it is incorrectly called in the Local Plan consultation. Northchurch is a village separate from Berkhamsted with its own character, and I love every thing about our community: the people, the canal, the rare chalk stream the Bulborne, the plentiful trees and green spaces. Best of all is having Ashridge nearby and the views of green everywhere you look from the Common (and even green fields that I can see from my loft bedroom). I've never regretted moving to this beautiful valley.</p> <p>You can imagine how disappointed and disgusted I was to hear about the details of the proposed Local Plan, which will ruin everything that is beautiful about Northchurch by over-building on our precious green belt.</p> <p>I am particularly concerned with the effect that the proposed plan will have on the ancient woodland especially in Shooters Lane, and how the hedgerows will be managed, which are vital for biodiversity (and need a 10m zone around them to work effectively as a habitat. These wildlife corridors are vital to creatues in our area.</p> <p>I'm also worried that my husband who commutes to London will struggle to get on a train due to the vastly increased population of Northchurch and Berkhamsted that this plan will cause.</p> <p>I am also very concerned about hwo this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown</p> <p>I am concerned that many residents simply did not know this was going on – publicity was poorly planned and haphazard Of the small proportion of residents who did get the brochure – many believed they had no way of responding – it was not clear that postal responses were possible as the literature only referred to using the portal or email – those without IT felt excluded.</p> <p>Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during locakdown – they were busy with working-from-home whilst home-schooling children as well as a dealing with the challenges of CV19 and lockdown</p> <p>The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation</p>

There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing

The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT

It was not possible for councillors or their teams to knock on doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown

People expect consultations to involve public meetings where officers can explain what is proposed and answer questions

Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, “reflect the considerable effect Covid-19 has had on areas such as shopping habitats and town centres as well as changes to planning law”.

QUESTION ANY OTHER COMMENT comment These are enormously important future plans for our Borough. But you are holding this consultation at a time when the population are all locked down and completely distracted on the tough task of just keeping their family’s life on the road. It is asking an awful lot of people at such a moment to study the huge number of documents involved, in order to make a meaningful response. The end of the lockdown is hopefully in sight, so it is hard to understand why you cannot delay or extend for a few weeks, in the near certainty of getting a much higher quality response from the public. The fact that you are unwilling to do so will confirm many people in the view that this is a box ticking exercise, rather than a genuine consultation.

Your internet portal in use for this consultation is a real dog's breakfast. Even the very experienced and IT savvy have great difficulty navigating it and it has single-handedly raised the average blood pressure of those responding in the Borough. Surely you can do a lot better?

QUESTION ANY OTHER COMMENT comment

It can be a challenge to love some of the New Town architecture that Hemel is blessed with. But this is mitigated by the abundance of open green space all around us. The general thrust of the Plan seems to disregard this important factor. It is bad enough having shops closing and being boarded up all over the place without making the aesthetics around the town even worse still.

The National Planning Policy Framework, section 13, paragraph 136 states very clearly that Green Belt boundaries should be altered only where exceptional circumstances are fully evidenced and justified. Given the other options available, it is open to considerable doubt as to whether the Council has met this stipulation in its plans to encroach on the Green Belt in this Plan.

QUESTION ANY OTHER COMMENT comment	<p>I have received no written communication with regards to these plans, and find it disappointing, to say the least, that the consultation has taken place during lockdown; leaving us to try to navigate the over-complicated / convoluted response portal whilst at the same time holding down a full time job and home schooling.</p> <p>We have never received a paper-copy of the proposed plans, but instead have heard about it organically through social media. Since the consultation period began, we have had very little time out of lockdown; so you're expecting residents</p>

to navigate the convoluted portal and get to grips with massive proposals, whilst at the same time having to deal with holding down full time jobs and home schooling children.

You have not allowed the public a chance to debate it openly and discuss it. We've not received any material on it, as mentioned - how many others haven't? There's obviously a lack of door to door canvassing.

It feels like you are pushing proposals through, which apparently you don't support yourselves, hoping that as few of the public engage in as possible. It feels disingenuous, and at the same time it's not environmentally or ethically sustainable.

I wholeheartedly hope these plans are rejected. The strategy has not taken into account, or has reduced the significance, of issues such as the climate emergency, the environmental impact of the proposed development and the prioritisation of brownfield sites.

QUESTION ANY OTHER COMMENT comment

I am very concerned that amongst the wider Dacorum community there is a general lack of knowledge about the local plan and more importantly that the consultation period for it is about to close and as such people have missed the chance to comment on their future.

Due to Covid restrictions it has not be possible to engage and inform people with events such as:

- Door to Door canvassing of the local plan consultation
- Interested parties to meet and canvas at the various town markets Covid restrictions have impacted
- Our ability to attend Council Meetings in person rather relying on access to online forums - Residents being able to meet and consider responses to the local plan

The Government has asked all of us to restrict our interactions with the general public as it is both irresponsible and unlawful to do otherwise.

The council should extend this consultation by many more months, until the current crisis is over and an additional subsequent period be provide for the full engagement by all Dacorum residents. I feel the strategy has failed to take account of a number of important issues or has diminished their significance, most importantly - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth should be balanced against and not override environmental concerns and climate obligations.

It should be the aim to create smaller developments, utilizing modest parcels of available land and enabling easy absorption of new developments within existing communities. Vast developments of enormous acreage are not sympathetic to any area: a new settlement should not dwarf its near neighbours. An example of harmonious creation of new homes would be the 3 developments recently built or under construction in Wingrave - these provide new housing without destroying or engulfing the existing community.

QUESTION ANY OTHER COMMENT comment	<p>The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).</p>

QUESTION ANY OTHER COMMENT comment	I did not receive the Dacorum Local Plan brochure and know that many other residents of both Northchurch and Berkhamsted are in the same position. It feels like the consultation has been pushed through under the radar and in the middle of a nationwide lockdown.

I strongly object to the Local Plan. The Plan involves disparate housing developers involved in numerous separate developments with accountability to the local community and no interest other than making a profit from these opportunities. There is no holistic overview of what housing is needed within the local community and the required infrastructure to support any development.

QUESTION ANY OTHER COMMENT comment

- I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown
- I am concerned that many residents simply did not know this was going on — publicity was poorly planned and haphazard
- Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT felt excluded.
- Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home- schooling children as well a dealing with the challenges of CV19 and lockdown

- The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation
- There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing
- The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT
- It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown
- People expect consultations to involve public meetings where officers can explain what is proposed and answer questions
- Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, *"reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law"*.

- Of the small proportion of residents who did get the brochure - many believed they had no way of responding— it was not clear that postal responses were possible as the literature only referred to using the portal or email - those without IT felt excluded.
- Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown— they were busy with working-from-home whilst home- schooling children as well a dealing with the challenges of CV19 and lockdown
- The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation
- There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing and distressing
- The consultation excluded cohorts of people who were unaware of it or who could not access it due to lack of IT
- It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown
- People expect consultations to involve public meetings where officers can explain what is proposed and answer questions
- Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, *"reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law"*.

Yes / No * Yes * No	Yes
QUESTION ANY OTHER COMMENT comment	<p>For Tring Squash club the extra land needed to increase playing capacity is modest. However the Cow Lane site which is home to 5 sports clubs needs much more car parking to meet today's playing demand. Currently approximately 2500 people are involved in the sporting activities at the site. The demand for car parking at the site frequently far exceeds car parking capacity. This leads to dangerous parking on Cow Lane which has resulted in several accident near misses, road rage incidents and the police have been involved. Increased housing in Tring will increase the traffic using Cow Lane, therefore exacerbating the current problems.</p> <p>The provision of new sports facilities should be on land contiguous with the Cow Lane site so that existing infrastructure such as changing rooms, club houses and playing areas can be re-used and new infrastructure provision can augment existing facilities e.g. car parking.</p> <p>It is vital the sports clubs in Tring get the opportunity to engage in the detailed planning process so that new sport provision builds on and integrate effectively with the current facilities.</p>

QUESTION ANY OTHER COMMENT comment	<p>Having lived in this town my entire life I have witnesses the removal and deconstruction of practically all of the best adult/family entertainment venues in this town - the Pavillion, countless pubs that hosted live music as well as social clubs, nightclubs, bars, arcades, swimming centres, bowling, pool halls, Quasar, and many others. To compound this, the population has grown significantly already and the residents are feeling it.</p>

Not planning to provide social activities for residents is highly detrimental to people's mental, physical and social health. Planning to increase the population of the borough by an additional 50,000+ people without planning for these improvements will compound this issue even further. Residents need to be provided with a wide variety of options for things to do. There's only so many times you can go for a meal and head to the cinema.

High streets should no longer be focused purely on shopping, which is being driven out by online shopping, and instead should offer a range of entertainment venues for residents. This will provide jobs and bring high streets to life. Entertainment venues should be suitably sized. The Old Town Hall has a capacity of around 100 people. This is not suitable to cater for a growing town which will soon have a population to rival cities. Entertainment venues can cater for local groups such as amateur dramatics, local music festivals, open mic nights and then have the potential to draw in larger acts in terms of comedians, musicians and bands, theatre productions, etc.

After COVID, people will be craving and valuing these facilities more than ever before.

Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite.

Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.

Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.

QUESTION ANY OTHER COMMENT comment	<p>The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.</p> <p>It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.</p> <p>If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape</p>

surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	<p>My comments on the review of the Local Plan are contained within this email. I was unable to upload them on the website as it was far too time consuming. I work a very demanding full time job and am home-schooling 3 children. This is an absurd time to do a public consultation when people are totally distracted with managing to work and home schooling children whilst there is a pandemic. There have been no public events held to properly inform local residents of the plan which is crucial when there are such momentous changes proposed for Dacorum.</p>

QUESTION ANY OTHER COMMENT comment	<p>Having moved to this town some 10+ years ago I have been witnesses to the removal and deconstruction of practically all of the best adult/family entertainment venues in this town - the Pavillion, countless pubs that hosted live music as well as social clubs, nightclubs, bars, arcades, swimming centres, bowling, pool halls, Quasar, and many others. To add to this, the population within Hemel and the surrounding areas has significantly grown and the residents are feeling the strain especially with the closure of the local amenities and leisure facilities.</p> <p>Where in this plan are the additional social amenities/ leisure facilities. health and mental wellbeing go hand in hand, are these new residents supposed to be cooped up in their new houses with no means of entertainment. A volatile situation and not ideal for mental, physical and social health .</p> <p>The local town is already on a downward slope with many units closing due to the high rents and more shopping going online - this heightened by the COVID epidemic. Whilst there are a few options to offer entertainment facilities, there is not a venue which would cater for the 50,000 extra people expected to be housed in this new development.</p> <p>With COVID subsiding, these facilities will be scouted by people yearning to vist these attractions more than ever</p> <p>The anticipated growth is clearly not compatible with sustainability. A simple and very basic fact. Economic and environmental performance must go hand in hand. The natural environment is centre to all economic activity and growth, providing all the resources we need to produce goods and services, absorbing and processing unwanted by-products in the form of pollution and waste. Environmental assets contribute to managing risks to economic and social activity, helping to regulate flood risks, regulating the local climate (both air quality and temperature), and maintaining the supply of clean water and other resources. Over population in one area threatens the biodiversity and mnatural resources.</p>

Any new builds should be carbon zero or as low as possible.

The 40% minimum affordable homes objective should be enforced across the Borough. Too often developers in the past have been allowed to waive their affordable homes commitments.

Trees and woodland are very valuable to the environment and the community's physical and mental health. I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, any new major development area.

- An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors.
- Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside boundaries. These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.
- The Local Plan should allocate land for new allotments for residents of new homes as well as laying out gardens to support 'Growing your own' (which is both sustainable and good for mental health)
- Public transport must be improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be widened. Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

Additionally, it was only due to a neighbour alerting us to this proposed building application that you are receiving a response. You need to ask questions to the distribution Company used and/or your approach in advising local residents.

QUESTION ANY OTHER COMMENT comment	<p>We write on behalf of our client, Homes England, to submit representations in response to the Dacorum Borough Council ('DBC') Emerging Strategy for Growth 2020-2038, Regulation 18 consultation draft ('the Draft Plan').</p> <p>Homes England exists to accelerate the delivery of housing across England; they are a national agency and non-department public body, sponsored by the Ministry of Housing, Communities and Local Government. We can confirm that Homes England acquired the site (known as Growth Area Bv02) from the Ministry of Justice in 2018 and are in the process of unlocking this site. Homes England are currently undertaking technical studies of their landholding at Chesham Road and Molyneaux Avenue, Bovingdon to support the disposal of the site and ultimately the submission of a planning application for residential development.</p> <p>RESPONSE TO REGULATION 18 CONSULTATION</p> <p>This response primarily focuses on the Draft Plan's position regarding housing provision within Bovingdon, specifically the proposed housing allocation Chesham Road and Molyneaux Avenue (Ref. Growth Area Bv02, Chapter 24), and comments in relation to the Guiding Development policies, as far as they are relevant to this site and Homes England's proposals.</p> <p>We have structured our response according to the questions posed by the online consultation comment form:</p> <ul style="list-style-type: none"> • Question 1: Do you think the overarching vision, the vision for Dacorum's places and the strategic objectives are right for the Borough? • Question 2: Do you have specific comments about the Sustainable Development Strategy? • Question 3: Do you have specific comments about any of the Guiding Development policies? • Question 4: Do you have specific comments about any of the Delivery Strategies? • Question 5: Do you have specific comments about any of the Proposals and Sites? • Question 8: Do you think the Plan is consistent with the National Planning Policy Framework (NPPF) and supporting guidance? • Question 6: Do you have any comments on the Sustainability Appraisal that accompanies the Plan? • Question 7: Do you agree that the Evidence Base that accompanies the Plan is adequate, up to-date and relevant? • Question 5A: Are there any other sites that you think should be included in the Plan? • As set out within these representations, in order for the Draft Plan to be found sound at Examination, the Council needs to: <ul style="list-style-type: none"> • Increase its level of housing provision in line with the most recent Standard Method calculation, to a minimum of 1,023dpa. Due to the historic undersupply of housing and worsening affordability, the Council must plan effectively to meet and exceed this requirement. • Site allocation:

- Amend its interpretation to the NATS safeguarding zones in Bovingdon, removing its reference as justification for enforcing limits on building heights in Bovingdon and at the
- Amend the policies, justifications and Evidence Base to reflect the deliverability of 60 dwellings at The Mount, as well as removing the height limits as per the NATS consultation response, and the requirement for the site to ensure the maintenance and enhancement of the infiltration
- Update redline of allocation to reflect previous
- Update draft Policy SP2 – Spatial Strategy for Growth and SP27 – Delivering

Growth in Bovingdon to reflect allocation of The Mount for 60 homes.

- Note comments in relation to draft guiding policies
 - DM8 – Custom and Self Build Housing
 - SP13 - Delivering High Quality Design

We trust our representations will be taken into account in preparing the next version of the Local Plan. Our client is keen to engage with DBC and wish to continue to be involved in further consultations on the Local Plan process moving forward.

QUESTION ANY OTHER COMMENT comment

Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite. Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced. Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.

All new buildings should be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets and store and re-use grey water. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan. " The 40% minimum affordable homes objective should be enforced across the Borough. Too often developers in the past have been allowed to waive their affordable homes commitments.

" Trees and woodland are very valuable to the environment and the community's physical and mental health. I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, any new major development area.

" An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors.

" Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside boundaries. These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.

The Local Plan should allocate land for new allotments for resident of new homes as well as laying out gardens to support "Growing your own"(which is both sustainable and good for mental health)

" Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be widened. Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

Additionally, some people that I know received a leaflet through the door regarding the local plan. However, an equal amount of people I spoke to did not receive this - it is suggested this is picked up with your distribution company!

QUESTION ANY OTHER COMMENT comment	<p>This plan will not allow Dacorum to meet it's climate targets, neither will it half biodiversity collapse. Most importantly the house building it proposes will not lead to improvements in quality of life or happiness for dacorum's inhabitation, either now or in the future. The is a local plan to allow developers to make large amount of money at the expense of the population. Dacorum council has declared a climate Emergency since the local plan process was initiated and therefore needs to go back to the drawing board. It urgently needs a overarch zero carbon and sustainability strategy to outline how it can forfil it's obligations under it's own Climate Emergency declaration and the national zero carbon targets. Then in light of this it should review it's currently local plan in light of this new overarching strategy, which will likely be found to be inadequate. Dacorum therefore will need a new Climate Emergency local plan covering the next 10 years of the transition. For such a response to an appropriate emergency response to the urgency outlined in it's climate emergency</p>

declaration both these steps need to be completed in the next two years, and all other priorities should go on hold until overarching zero carbon and sustainability strategy is in place. Evidence that climate change and biodiversity loss are emergencies:

<https://www.ipcc.ch/sr15/>

<https://www.ipbes.net/news/Media-Release-Global-Assessment>

The following clarifies UK's obligations within IPCC 1.5C carbon budgets, and that only path way one is a viable and safe option for humanity.

<https://www.cusp.ac.uk/themes/aetw/zero-carbon-sooner/>

Evidence that responding to emergencies requires not just putting something on the agenda, but taking everything else off the agenda and reviewing how it fits in with this new pressing issue.

https://www.greenhousethinktank.org/uploads/4/8/3/2/48324387/climate_emergency_plan_that_fu_cr_may20.pdf

Resources clarifying implications of the above for how our economy and governments (both locally and nationally should respond:

<https://www.greenhousethinktank.org/climate-jobs.html>

<https://www.greenhousethinktank.org/climate-emergency-economy.html>

<https://cat.org.uk/info-resources/zero-carbon-britain/research-reports/> <https://ukfires.org/absolute-zero/>

Due to urgency of response require and all encompassing nature of transition that is needed, it is highly reconomended that council commission a citizen's assembly to shape the overarching strategy and then the subsequent emergency local plan:

<https://extinctionrebellion.uk/wp-content/uploads/2019/06/The-Extinction-Rebellion-Guide-to-Citizens-Assemblies-Version-1.1-25-June-2019.pdf>

QUESTION ANY OTHER COMMENT comment	<p>7. Lack of Coherence and Strategy</p> <p>The Plan fails to take into account the combined impacts of the coronavirus pandemic and recently expanded permitted development rights, both of which create many more opportunities for conversion of commercial space (especially office and retail) to residential use, and thus windfall provision of housing throughout the Borough is likely to be much higher than estimated. A more positive place making strategy is needed as part of a formal brownfield land review to realise local enhancement of the existing built environment with benefits for existing residents.</p> <p>This will ensure much greater emphasis should be given to regeneration of previously developed land in order to reduce the amount of housing and employment development on Green Belt and other greenfield sites outside of existing towns and villages.</p> <p>There is an over-reliance on aspirational growth strategies and partnerships which have not been subject to public consultation and scrutiny. The Emerging Strategy for Growth appears to be based on selective strategy documents (Dacorum Growth & Infrastructure Strategy to 2050, Dacorum Corporate Plan 2020-2025 and Corporate Action Plan) that have no formal planning status and which have not been widely consulted on.</p> <p>As a result, the Plan has failed to take account of a number of important issues - the climate emergency, the environmental impact of the proposed development, and the prioritisation of 'brownfield' sites to meet housing needs. The pursuit of economic growth as promoted by the Hertfordshire Local Enterprise Partnership and implied by background work for a South West Herts Joint Strategic Plan, should be balanced against environmental concerns and climate obligations before they are tested through the local plan process.</p> <p>There are knock on implications on this Plan of the withdrawal of St Albans Submission Local Plan. This Strategy assumes that large areas of Green Belt land east of Hemel Hempstead and in St Albans District will be allocated for residential and employment development as part of the Hemel Garden Communities project. The St Albans Submission Local Plan has recently been withdrawn from Examination as the Inspectors advised that it would not be found 'sound'. The proposed sites north of Hemel Hempstead (5,500dw) in Dacorum must be called into question if there is any doubt about the future viability of the Garden Communities project as a whole.</p> <p>8. Conclusion</p>

It is my profound belief that DBC should withdraw the proposed Plan and revisit it taking account of the Government's own guidance that greenbelt release is not required to meet housing 'targets'. The required number of new houses should be revised down, using the latest data and social trends.

I have read the CPRE response to the Plan and I would like to see Dacorum Borough Council develop a Local Plan based on the principles set out in the recently published "Vision for Planning" which CPRE in collaboration with 18 national organisations have presented to the government.

Crucially, in my view, a revised Plan should have sustainable development and action on the climate emergency at its heart. It should protect and enhance local green spaces and heritage for the benefit of people and nature.

It should recognise and act to deliver enough quality affordable and social homes for purchase and rent to meet local needs. This means moving beyond the current mechanisms to ensure the right amount of affordable and social homes in accessible urban locations.

It must encourage green and sustainable forms of transport and redevelop our urban areas to realise more vibrant mixed use town centres and encourage shifts towards walking, cycling and green public transport as the main forms of transport. Health and well-being are paramount to our communities. This Local Plan will make life worse for existing residents and offer a congested, polluted market town, stretched beyond its limits, to anyone thinking of moving here.

Please withdraw this plan and revise it based on realistic assessment of the actual housing need, with the climate emergency at its centre and consult on it widely, ensuring that ALL residents have a chance to understand and comment on it.

This plan is far too excessive and out of character for the local area.

A rural situation which will be extensive altering the area and landscape. Local working farms which have provided and sustained the country during the covid pandemic are to be compulsory purchased therefore reducing the agriculture productivity in this area.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein

for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	<p>Having lived in this town my entire life I have witnesses the removal and deconstruction of practically all of the best adult/family entertainment venues in this town - the Pavillion, countless pubs that hosted live music as well as social clubs, nightclubs, bars, arcades, swimming centres, bowling, pool halls, Quasar, and many others. To compound this, the population has grown significantly already and the residents are feeling it.</p> <p>Not planning to provide social activities for residents is highly detrimental to people's mental, physical and social health. Planning to increase the population of the borough by an additional 50,000+ people without planning for these improvements will compound this issue even further. Residents need to be provided with a wide variety of options for things to do. There's only so many times you can go for a meal and head to the cinema.</p> <p>High streets should no longer be focused purely on shopping, which is being driven out by online shopping, and instead should offer a range of entertainment venues for residents. This will provide jobs and bring high streets to life. Entertainment venues should be suitably sized. The Old Town Hall has a capacity of around 100 people. This is not suitable to cater for a growing town which will soon have a population to rival cities. Entertainment venues can cater for local groups such as amateur dramatics, local music festivals, open mic nights and then have the potential to draw in larger acts in terms of comedians, musicians and bands, theatre productions, etc.</p> <p>After COVID, people will be craving and valuing these facilities more than ever before.</p> <p>Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite. Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.</p> <p>Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.</p>

QUESTION ANY OTHER COMMENT comment	<p>Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite. Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.</p> <p>Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.</p> <p>All new buildings should be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets and store and re-use grey water. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.</p> <ul style="list-style-type: none"> • The 40% minimum affordable homes objective should be enforced across the Too often developers in the past have been allowed to waive their affordable homes commitments. • Trees and woodland are very valuable to the environment and the community's physical and mental I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, any new major development area.

- An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors.
- Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside boundaries. These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.
- The Local Plan should allocate land for new allotments for resident of new homes as well as laying out gardens to support 'Growing your own'(which is both sustainable and good for mental health)
- Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

We are facing a climate emergency and addressing this must be at the absolute core of Dacorum's Local Plan. Currently it is not. We have the knowledge and technology to make good affordable zero carbon sustainable homes. We must demand that the Local Plan prioritises this.

QUESTION ANY OTHER COMMENT comment

This plan appears to accept and support growth that is far in excess of estimated population increase. It follows on from this basic assumption in all the excessive and disproportional plans for Tring. It reads as a developers plan (based on economics) rather than providing a forward looking vision for the 21st century, in the context of climate emergency.

Duty to Cooperate with other Local Councils

As above, there is no evidence that this duty has been met as part of this plan, and indeed it appears as a protocol to be done after planning has taken place rather than as an integral part of the plan. As Tring is bounded on two sides by Buckinghamshire, cross boundary impacts are considerable.

This is required as part of objectively assessing need before then using Green Belt land to meet thus identified needs.

I agree with the following from the Grove Fields Residents association response to the Local plan:

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty.

I agree with the following from the Tring in Transition response to the local plan:

On Distinctive Developments and Vision for the Future

The need for ‘distinctive’ development is mentioned several times in connection both with the natural and built environments (e.g., ‘All settlements will have retained their separate and distinctive identities informed by proposals that were shaped by a detailed understanding of place.’ – Overarching Vision, page 22).

It is not clear how this will be either defined or agreed for Tring, which is arguably the most distinctive settlement in Dacorum in terms of natural setting, social and economic history. Neither is it clear how this will be given ‘teeth’ in order to proactively shape development.

There is a real opportunity here for Dacorum to create an exemplar Plan and an opportunity to work with local groups sooner rather than later.

In the absence of a working definition, Tring in Transition has created an initial description of what makes Tring distinctive to help shape what we would expect to see in the final version of the Plan. This highlights our unique heritage and location, including:

- A Rothschild legacy of forward-thinking development, respect for the environment, bold and challenging designs and solutions.*
- A strong heritage of local renewable energy with significant wind and waterpower.*
- A location surrounded by more than 50% of Dacorum’s SSSIs, extensive AONBs, as well as extensive hedgerows and other wild places.*
- A service-oriented, agricultural, market legacy and a traditional destination location to visit, meet, relax and socialise.*

1 '21st Century Market Town'

To address the need for growth, enhance the existing town centre and correct assumptions apparently carried over from previous planning exercises (traceable back to the 1990s).

We proposed taking a lead from existing '21st-century market town' schemes successfully being deployed in Yorkshire, Stroud etc. In summary, this includes recognising the limited need for new town centre retail space; acknowledging that central supermarkets are more damaging environmentally than those designed to limit travel and traffic congestion; and acknowledging changing employment patterns and social norms (this is especially true for Tring).

- Replace proposals for significant new retail space and encourage more food, experiential, social, entertainment and 'destination' spaces etc.*
- Revisit plans for a central supermarket (which will only add to issues with existing traffic hot spots) and recognise the patterns of use from those living in villages to the north of Tring. (Depending on revisions to developments – this could well be at the Bulbourne side of town.)*
- Remove proposals for warehousing and large industrial units on the Dunsley Farm site and build on Tring's heritage as a service-oriented market town by building smaller, more flexible workspaces that reflect rapidly growing local/home-working patterns.*
- Revisit plans for Tr06/Brook St: prioritise schemes fronting to the High Street, encouraging food, social and 'destination' spaces.*
- Recognise that Dunsley Farm is better suited to residential home development than light industry – meeting both social and employment needs.*

1 'Linked Wildlife Corridors'

To address pressures on local green spaces, SSSIs, biodiversity and Green Belt loss.

*The definitions of open spaces, green spaces, green buffers and wildlife corridors need to be more explicit. They are a consistent cause of confusion and question in the Plan. There is a need for all of these, but given the high number of SSSIs around Tring, AONBs, the Beechwood SAC, etc. **there is an opportunity to establish a country-leading if not world-leading scheme where defined wildlife corridors are proactively established around the entire perimeter of the town, through new developments and onwards to local nature reserves etc.***

- Implement joined-up wildlife corridors through and around all new developments.*
- Explicitly plan to proactively link all SSSIs via wildlife/green corridors.*
- Provide managed public access through a new network of paths.*
- Provide an opportunity for the various organisations managing local wild spaces (Woodland Trust, National Trust, Wildlife Trusts, Chiltern Society, Rothschild Estates etc.) to work together with the Council to design and build this. (An initial poll of these organisations indicates a strong willingness.)*
- Recognise NPPF requirement that any Green Belt development requires explicit mitigation and improvement on other Green Belt land. (The inclusion of green and open spaces in existing Green Belt parcels earmarked for development does not count towards this.)*

1 'Sustainable Energy Use'

To address county and national carbon targets and to reinvent Tring’s legacy of renewable energy use. We acknowledge statements about going beyond current government guidelines on new housing insulation. This sounds good but will already be superseded by more demanding targets before we are halfway through the term of this Plan. We are also aware that developers have pushed back with statements like ‘we don’t find a market for solar panels’ etc. These are, frankly, irrelevant and should be entirely disregarded.

Developments around Tring have a clear and new opportunity to embrace the highest possible standards that can be mandated (if not higher):

- *All new developments built to highest possible standards of carbon neutral build and energy efficient operation.*
- *Renewable energy targets, inclusion of solar systems in new homes etc. (regardless of any developer pushback) should be explicitly mandated.*
- *See our detailed response to SP24 etc.*

Organisation Details	Trustees of Gaddesden Estate (GaddesdenTrust)
Agent ID	1270367
Agent Full Name	Mr David Fletcher
Agent Organisation	Director – National Development & Planning Strutt and Parker
Yes / No * Yes * No	
QUESTION ANY OTHER COMMENT comment	Strutt & Parker have been instructed to submit representations on the Council’s emerging growth strategy for the Dacorum Local Plan, on behalf of the Trustees of the Gaddesden Trust Dacorum Borough Council is in the process of preparing a new Local Plan for the period 2020-2038. Once adopted, the new Dacorum Local Plan will replace the Site Allocations Development Plan Document (2016), Core Strategy (2013) and ‘saved policies’ from the Dacorum Borough Local Plan (2004).

This representation seeks to object to the proposed growth strategy and two housing allocations included in the emerging Local Plan. The emerging policies within the Local Plan, that are considered to be unsound are set out as follows:

- Policy SP2: Spatial Strategy for Growth;
- Policy SP4: Delivering the Housing Strategy;
- Policy Growth Area HH01: North Hemel (Phase 1); and
- Policy Growth Area HH02: North Hemel (Phase 2).

This representation sets out in detail why we consider the above policies to be unsound, having regard to the relevant tests set out within national policy.

The National Planning Policy Framework (NPPF) states that there should be a presumption in favour of sustainable development in the plan making process which means positively seeking opportunities to meet the development needs of an area and be sufficiently flexible to adapt to change. One of the key objectives for plan marking is that plans should be aspirational but Positively prepared plans and with deliverability strategies are key tests of soundness.

The emerging Local Plan and the policies listed above are considered to be unsound, as it is not positively prepared or deliverable, for the following reasons, which we will expand upon in further detail within this representation:

- The allocation of North Hemel garden settlement is not the most appropriate strategy, when considered against the alternatives. The allocation is both of an inappropriate size and is situated within an unsuitable location. The focus should be on the ability to deliver a higher number of smaller to medium sized sites that are capable of being delivered in the short to medium term.
- It is questioned whether the North Hemel expansion is deliverable or economically the most suitable option having regard to the cost of the infrastructure and the density of the proposed housing development.
- The proposed development of Hemel North will have an adverse impact upon the Chilterns Area of Outstanding Natural Beauty (AONB). There are alternative locations that do not impact upon the AONB which should be a focus for growth.
- The proposed development will result in significant visitor pressure upon the AONB, that do not appear to have been adequately mitigated. In particular, there will be significant impact on public rights of way to the north of the site and Ashridge Beach Woods Special Area of Conservation (SAC).
- That the proposed development is not consistent with the environmental dimension of sustainable development within the NPPF, having regard to the loss of green space, carbon capture and biodiversity and lack of robust mitigation strategy to off- set this environmental impact.

It is also considered that further consideration needs to be given to the housing need within Dacorum and Hemel Hempstead, accounting for the likely change to homeworking as a result of the Covid-19 pandemic, which is likely to result in office to residential conversions within Hemel Hempstead.

Whilst it is our strong view that policies HH01 and HH02 should be removed from the plan, in order for it to be considered as sound, in the event that the policies are retained within the plan, the policy wording needs to be amended in order to safeguard the AONB and protect neighbouring residential receptors. We will set out our proposed amendments to the policy wording within section 7 of this report.

The land owned by our client, immediately abuts the northern boundary of the proposed Hemel North allocation areas.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density

opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

19. Finance and Influence. The larger property development companies are mostly making good profits, and they have spent money on influencing decisions. This leads to an imbalance between developers and local people in the decision-making process.

- At a high level, there have been significant political party donations, notably by Thakenham to the Conservative Party (their sponsorship was evident at the 2017 Conservative Party Conference). At a local level, it is evident that developers have been hiring expensive legal teams to comb through the Local Plan decisions if they think they have been unfavourably treated. For example, Crest Nicholson, who own the land adjacent to Blegberry Gardens . Their lawyers at spbroadway have made a substantial case as to why their parcel of land should be included, when initial assessment for DBC recommended that this portion of land should be removed from consideration as it had a high sensitivity. It is now back in the Strategic Assessment.
- This places the land developers in a position of significant influence, which is in huge contrast to the influence of local people – whether individuals or community organisations. This means that local residents do not have an equal voice in the process, and it is particularly noticeable at this time when the consultation is happening during the Covid-19 lockdown.

QUESTION ANY OTHER COMMENT comment	<p>Having lived in this town my entire life I have witnessed the removal and deconstruction of practically all of the best adult/family entertainment venues in this town - the Pavillion, countless pubs that hosted live music as well as social clubs, nightclubs, bars, arcades, swimming centres, bowling, pool halls, Quasar, and many others. To compound this, the population has grown significantly already and the residents are feeling it.</p> <p>Not planning to provide social activities for residents is highly detrimental to people's mental, physical and social health. Planning to increase the population of the borough by an additional 50,000+ people without planning for these improvements will compound this issue even further.</p> <p>Residents need to be provided with a wide variety of options for things to do. There's only so many times you can go for a meal and head to the cinema.</p> <p>High streets should no longer be focused purely on shopping, which is being driven out by online shopping, and instead should offer a range of entertainment venues for residents. This will provide jobs and bring high streets to life. Entertainment venues should be suitably sized. The Old Town Hall has a capacity of around 100 people. This is not suitable to cater for a growing town which will soon have a population to rival cities. Entertainment venues can cater for local groups such as amateur dramatics, local music festivals, open mic nights and then have the potential to draw in larger acts in terms of comedians, musicians and bands, theatre productions, etc.</p> <p>After COVID, people will be craving and valuing these facilities more than ever before.</p> <p>Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite.</p> <p>Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.</p>

Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.

QUESTION ANY OTHER COMMENT comment	<p>I found your portal difficult to navigate but wanted to express my sincere objections to the local plan for housing development and so have copied and pasted this from the Liberal Democrats. I agree wholeheartedly with this and would be very grateful if you could take my response into consideration.</p> <p>Introduction</p> <p>The Dacorum Local Plan for the next 18 years needs to provide the right homes, in the right places for local people, and rise to the twin challenges of climate change and a (post) COVID-19 world.</p> <p>We would like to thank the exceptionally dedicated Officers of DBC for their excellent work in putting together this plan. With the competing needs of a growing population and the Climate Emergency, not to mention an excessive target from MHCLG and a rapidly changing society it is inevitable that there will be disagreement on the best way to proceed, but this does not in any way diminish our appreciation for the efforts of our officers.</p> <p>There has been a shortage of affordable housing across the UK in recent years, and in Dacorum in particular, there is an acute shortage of social housing. At present there are over 7000 people on the housing list in Dacorum, and despite a modest social housing building programme by DBC this figure has been increasing in recent years. Our build programme, whilst laudable, has not been keeping up with the increasing need.</p> <p>In an attempt to make housing more affordable across the Country, Government set a target of building 300,000 new homes per year. It is intended that this be achieved through setting local housing targets at a national level, using the 'standard method'. The standard method is an algorithm which increases the housing target above Office For National Statistics ('ONS') projections for areas where the housing is unaffordable. This approach assumes that increasing housing stock above housing demand will result in a reduction in house prices. Whilst this may appear to be a logical approach, it inevitably results in increased housing target figures for areas in the London commuter belt and in the South of the country as a whole. London is not affordable for a large proportion of people working and living there, and so it is a well trodden path to move out of London into commuter belt towns when you want to buy a home, or start a family.</p>

QUESTION ANY OTHER COMMENT comment	<p>Dacorum Borough Council has decided to go ahead with this “consultation” on a crucially important and massive plan for the future of our Borough, affecting the future of all its residents at a time when, due to the current pandemic, those residents cannot have full and easy access to the documents. In addition, some of the necessary documents are not yet available at all. The booklet sent round to homes is a totally inadequate explanation of what is actually planned, how it will affect residents and not all homes have received it anyway.</p> <p>Dacorum Borough Council has decided to go ahead with this “consultation” on a crucially important and massive plan for the future of our Borough, affecting the future of all its residents at a time when, due to the current pandemic, those residents cannot have full and easy access to the documents. In addition, some of the necessary documents are not yet available at all. The booklet sent round to homes is a totally inadequate explanation of what is actually planned, how it will affect residents and not all homes have received it anyway.</p> <p>The Council have refused to extend the consultation, despite the fact that, within weeks the public will be allowed more freedom of movement and therefore greater access to real documents. As it is those without internet access are severely disadvantaged. The information online is much as it was with the Core Strategy, dense and unfathomable except to those are experienced. It would appear that Dacorum Borough Council does not actually want the public to engage with the plan.</p>

QUESTION ANY OTHER COMMENT comment	<p>We seem to be losing too much open green space. Hemel has always made up for its architectural design failings because of its large areas of open green space. This Plan gives the impression that this policy will be abandoned in practice, whatever the words used claim.</p> <p>Developments already taking place as well as those planned seem to be taking away green space/green borders, particularly in the town centre.</p> <p>Green Belt: Under the Core Strategy land was removed from the Green Belt and new “firm” boundaries set, under the premise of safeguarding our precious Green Belt for the future. The Core Strategy has hardly been implemented, yet the current plan is proposing much greater development on Green Belt land. As said so often before, the Green Belt provides the lungs of the urban areas and the its reduction will have a detrimental effect on the health and well-being of citizens, but also of plants and wildlife. Access to the countryside is being made harder and harder, and will require greater use of cars to achieve this at a time when you are planning to reduce vehicle use in the interests of climate change. No further development should not take place on Green Belt land until it is proved that all possible brownfield land has been sensibly used.</p> <p>NPPF 13. Protecting Green Belt Land</p> <ol style="list-style-type: none"> 1 Once established, Green Belt boundaries should only be altered where exceptional circumstances are fully evidenced and justified, through the preparation or updating of plans. Strategic policies should establish the need for any changes to Green Belt boundaries, having regard to their intended permanence in the long term, so they can endure beyond the plan period. <p>Given that it is demonstrated that Dacorum’s imposed housing targets are ridiculously high, there is much less need to build on any Green Belt land. Housing need does not in itself provide an exceptional circumstance for Green Belt development.</p>

QUESTION ANY OTHER COMMENT comment	Replying to the consultation has been made very difficult.

The time available for comments had to be extended given that the Plan was published close to Christmas and not long before the latest Covid lockdown.

The quality of the maps is unacceptable. Details of sites cannot be seen. Publicity about the consultation has been poor. The first two prescribed questions are woolly and would be better following the later questions. The Plan is very complicated and asks questions of summarised policies followed by questions on the same policies in detail.

The document circulated in early February was not very helpful as it did not include the questions which are to be responded to, and did not give adequate information for them to be located on the DBC web site.

It is not clear how many DBC and TRL Ltd staff were employed in producing the consultation documents, but for individuals the time required to wade through the documents is very considerable.

It looks like more lip service has been paid to consultation than encouraging responses.

QUESTION ANY OTHER COMMENT comment	<p>I will reiterate my points:</p> <p>The number of homes is too high. The focus should be about making Hemel and the whole of Dacorum a nicer place to live, not about how to meet government building targets.</p> <p>No Green Belt land should be released.</p> <p>Too much high rise housing proposed.</p> <p>DBC have declared a climate emergency, yet you will generate vast amounts of CO2 by constructing 16,600 new homes whilst removing green space, which soaks up CO2 - there is no logic here at all.</p> <p>No plan for the lack of water or the effect this will have on the species that live in the chalk streams</p> <p>Residents have already been ignored after having given feedback regarding the Station Gateway development. Not being listened to!</p> <p>I would also like to add that not only as this proposal been put out for consultation at totally the wrong time but that Covid is going to drastically effect everything you have proposed! People are commuting less and working from home more. A report by the Economic Statistics Centre of Excellence, published in January 2021, suggests that the UK population may have fallen by as much as 1.3 million people as a result of Covid, which includes a decrease in London of almost 700,000. Therefore, themodel for the proposed plan is already out of date!</p>

Please find attached feedback regarding your local plan. I would like to add that I think Dacorum Borough Council have acted incredibly irresponsibly by putting this plan out for consultation during a national pandemic.

Residents are under a huge amount of stress home schooling and working from home. It feels like you have taken advantage of your local communities by not waiting until it is safe for a proper consultation in the hope that people will either not have time to comment or may not have even heard about the consultation at all as it is all online.

I hope that you listen to the feedback given rather than asking for feedback which is then ignored which seems to have been what has happened in previous consultations.

QUESTION ANY OTHER COMMENT comment	<p>Furthermore, I feel very angry that you have a consultation during a pandemic, when people's movements are restricted, working from home and homeschooling their children. Many have also been shielding. So, unless you read the Berkhamsted Gazette (I only occasionally do), go to the library (who does in these restricted times) or go on the Dacorum website, you will have been totally unaware of what is being planned. In other words, you are being disenfranchised.</p> <p>Surely, it would have been fairer to have sent each household a plan of your proposals through the post. There are many elderly and home bound people who find it difficult to access or use the Internet, or have no internet at all.</p> <p>For those working at home and looking after the needs of their children, they will not have the time, during this pandemic, to spend hours online to get the details of the proposals.</p> <p>During this pandemic, people's work and shopping habits have, possibly permanently, changed. Therefore a review of the plans should be considered, to include change of use for commercial buildings in the high streets and urban areas to residential.</p> <p>But, most shockingly of all, were the votes of Conservative councillors at last Wednesday's Council meeting, against extending the deadline, even though they know the plans are flawed. The details are surely in the minutes of this meeting.</p> <p>This leaves me with just one question. Who do these councillors represent? Probably, in this instance, not the local residents that put them there to look after their concerns and interests. Maybe the lobbyists for the construction companies have been very busy. Let's face it, to build on green belt is so much easier (and very much cheaper and profitable) than having to clear existing sites.</p>

QUESTION ANY OTHER COMMENT comment	<p>I object to the fact that the consultation has taken place during a pandemic and that the closing date for comments is during a national lockdown. This will inevitably mean that many people will have been prevented from commenting because they are either unaware of the plan, or cannot access the material which is only available online. This will particularly discriminate against the older population and there is a danger that their views will not be heard.</p> <p>The way the online commenting system has been set up is also, in my view, going to result in reduced numbers of responses as it is extremely time consuming to navigate all the documents and the content is high on top level wordy statements and very low on actual detail. The layout of the comments form is off putting to those unfamiliar with the vocabulary used, to those unfamiliar with council and planning terminology the headings are meaningless. With many people struggling at the moment to find time to juggle work and home-schooling, the length of time required to respond to this consultation will prevent many from commenting. This does not mean however that they agree with the plan.</p>

High streets will no longer be focused purely on shopping, which is being driven out by online shopping, and instead should offer a range of entertainment venues for residents. This will provide jobs and bring high streets to life. Entertainment venues should be suitably sized. The Old Town Hall has a capacity of around 100 people. This is not suitable to cater for a growinn terms of comedians, musicians and bands, theatre productions, etc.

After COVID, people will be craving and valuing these facilities more than ever before.

Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite.

Our housing needs will need to be reflected some more. Our economy may take until 2038 to recover from the covid Pandemic. Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.

All new buildings should be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets and store and re-use grey water. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.

" The 40% minimum affordable homes objective should be enforced across the Borough. Too often developers in the past have been allowed to waive their affordable homes commitments.

" Trees and woodland are very valuable to the environment and the community's physical and mental health. I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, any new major development area.

" An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife corridors.

" Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside boundaries. These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.

" The Local Plan should allocate land for new allotments for resident of new homes as well as laying out gardens to support ‘

Growing your own’(which is both sustainable and good for mental health)

" Public transport must be greatly improved both to connect these new homes - regular electric shuttles to the station/town centre also to reduce traffic congestion on the roads which cannot be widened. Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

QUESTION ANY OTHER COMMENT comment

I am concerned that this consultation was launched during the second national lockdown of the pandemic and continued running despite a third national lockdown. I am concerned that many residents, including my immediate neighbours and friends in the community, had NO IDEA this was going on. Had it not been for the information shared by Cllr. Lara Pringle, I would’ve missed this opportunity to object.

Publicity has been near non-existent bar the comms from Cllr. Lara Pringle, and that’s coming from me who is always on top of social media, emails etc..

Of the small proportion of residents who did get the brochure, many believed they had no way of responding. It was not clear that postal responses were possible as the literature only referred to using the portal or email. Those without IT felt excluded. Many people who care deeply about the loss of Green Belt did not have time to research this and write a response during lockdown. They were busy with working-from-home whilst homeschooling children as well as dealing

with the challenges of CV19 and lockdown. The lockdown rules meant that people could not attend public libraries or The Forum to view hard copies of the plan because this would entail making unnecessary journeys which were unlawful during most of the period of this consultation.

There was conflicting advice from the leadership of Dacorum Borough Council during this time, about whether it was appropriate to attend libraries or the Forum which was confusing. It was not possible for councillors or their teams to knock doors to alert residents to the consultation or assist them by explaining it because of the rules of lockdown.

People expect consultations to be transparent and fair – by having public meetings where officers can explain what is proposed and answer questions. Neighbouring Buckinghamshire Council withdrew the Chiltern and South Bucks local plan, partly due to CV19, noting that a revised plan would be drawn up to, "reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law".

QUESTION ANY OTHER COMMENT comment The timing of this plan to develop a long term strategy for growth is completely wrong. Planning on this scale should be halted while we live through the Covid pandemic and understand what permanent changes it has brought about. It is clear previous assumptions about, for example, retail and transport requirements will no longer be valid in the future. A plan drawn up at such an uncertain time cannot claim to be evidence based.

QUESTION ANY OTHER COMMENT comment	<p>Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012, requires Dacorum Borough Council to notify residents and other persons carrying on business. Dacorum's consultation process does not comply with these regulations. On the contrary, many people in Northchurch have either not heard of the consultation or have no means of responding.</p> <p>Many homes in Northchurch did not receive Dacorum's brochure. During the extended period of the consultation, residents from Northchurch and surrounding streets, including some parish councillors have told us that the brochure has not been delivered to their street including Granville Road, Cowslip Meadow, Lyme Avenue, The Meads, Darrs Lane, Northchurch High Street, Tring Road, Covert Road, Covert Close, Compass Point, New Road, Wharf Lane, South Bank Road, Chaucer Close, Kings Road Berkhamsted, Westfield Road, Durrants Lane, Pages Croft, Haynes Mead, Bridle Way, Edlyn Close and Winston Gardens. Additionally, the hard copy directs residents to the DBC website but does not provide the full information required for a resident to a return a meaningful response.</p> <p>Northchurch has a high percentage of elderly residents who do not access information online or via social media and know little of nothing about Dacorum's plans. Many residents to not have access to the devices that they need to consult the documents and are therefore excluded. Journeys to libraries are non-essential, unlawful and cannot reasonably be advised. In normal circumstances, Northchurch parish councillors would distribute leaflets detailing the plans for Northchurch to all our households, but Lockdown rules have prevented us doing this. One example from an elderly local man illustrates the difficulties face by elderly and disabled residents:</p> <p>"I moved area in 1959 and took part in a consultation on building on the field behind Chaucer Close at that time by attending a meeting in Sunnyside Church Hall. But I have not received any information notifying me of the current consultation. I have no IT. I cannot travel to a library because I am disabled, and I live alone. I would like to participate in the consultation, but it is not possible because the current lockdown restrictions say I should only do essential journeys."</p> <p>Meaningful consultation would reveal that virtually everyone in Northchurch believes that Dacorum's Plan does not recognise Northchurch and does not meet the needs or aspirations of local people. It will undermine their quality of life,</p>

harm their physical and mental wellbeing, and cause irreparable damage to the Green Belt. Northchurch Parish Council would like this plan to be withdrawn and replaced with a new plan based on an up-to-date assessment of housing needs that reflects the views of the people of Dacorum.

In conclusion the Local Plan:

- Is unknown to many residents due to lockdown restrictions
- Is deeply unpopular with those residents who are aware of it
- Uses out-of-date, 2014 housing projections which are much higher than current projections
- Prioritises housing targets above the Green Belt, climate change, sustainability, biodiversity and public health
- Does not meet the need for social housing
- The population increase in Northchurch (over 50%) will cause overcrowding and congestion
- Will destroy 40 acres of Green Belt in Northchurch, and 21,000 acres across Dacorum
- Is not compatible with the Sustainability Appraisal
- Will damage the River Bulbourne
- Will harm the physical health and mental wellbeing of local people
- Fails to protect the distinct community, history and rural character of Northchurch
- Allows Northchurch to 'sprawl' into Berkhamsted
- Fails to maximise the use of brownfield land for housing
- Fails to provide the infrastructure needed to cope with increased demand
- Fails to provide each development with a traffic management plan

<p>QUESTION ANY OTHER COMMENT comment</p>	<p>I am a long-time resident of Berkhamsted and responded to the 2017 Consultation, with comments of concern, including support of homes location option 1B. I know many fellow residents made the same choice and was surprised and disappointed that this was not reflected in the proposals on which the new consultation comments are invited.</p> <p>Please accept this letter as my only comments on the matter; I commenced the on-line version but would prefer my response to reflect only the Berkhamsted situation, which I know well.</p> <p>OVERALL POSITION</p> <p>Firstly, may I add to the many voices, who have asked DBC to abandon the current process, for the following reasons:</p> <ol style="list-style-type: none"> 1 The Covid lockdown has not allowed residents to follow fully the thousands of pages of the (at last) published data, nor to consult in any meaningful way with Planning Officers, local Councillors and other local associations. 2 This will surely result in the response levels being so low that they will not represent public comment at an acceptable sample level. 3 The huge changes in the central Government's housing number parameters make the target objectives meaningless. Worse, the current process simple allows developers to "line up" included sites for their own planned use, either inside or outside the Local Plan. <p>The argument, that the present process has cost a considerable sum, which would be wasted if abandoned, is not a good reason for continuing on the wrong path. The cost, versus parts of the Borough having a completely unacceptable planning future, are meaningless.</p>

<p>QUESTION ANY OTHER COMMENT comment</p>	<p>he Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border</p>

opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	Before embarking on my response to the draft Local Plan, I would like to say that I feel not enough opportunity has been given to a large section of the community which could not access the IT version of the consultation. As a result of Covid 19, the community could not access the library, the Forum, or Victoria Hall, as such an outing would not have been designated as essential by HMG. Therefore, I feel that the consultation could be regarded as invalid.

QUESTION ANY OTHER COMMENT comment	<p>Called me on 14 February to say he hadn't heard anything from DBC and did not have a computer. He felt it would be tragic if the built on the green belt. he said he and his wife first moved into the area in 1959 and recalled going to a meeting about proposals to build on BK-06 at that time. They objected successfully on the grounds of road access.</p> <p>Due to the CV-19 restrictions he has no way of going to a library or the Forum as he is disabled. In 2017 he attended a meeting at the Egerton Rothesay School about the development at Bearoc Park and would wish to participate in a consultation in a similar way again. He recalls that in 1959 he attended a meeting in a church hall to oppose development in BK-06.</p> <p>Consultee is concerned re the loss of the green belt - he thinks Green Belt land should not be released for development as it is precious. He is concerned about traffic congestion from over- development.</p>

QUESTION ANY OTHER COMMENT comment	<p>Finally I have attached a photo showing 2 important facts – firstly we received the Growth Strategy brochure only on Thursday 25th February – 4 days before the deadline of the consultation on the 28th February. How are we supposed to have had enough time to respond and assist others to respond to the consultation who need help with postage, the internet, access to the information etc?</p> <p>I would like to also add that the information I have tried to access over the last week since I have been made aware of this growth strategy by the community, is incredibly complicated and confusing. I have a degree and am perfectly proficient on the internet but there is a lack of clear, concise, accessible information available to the public to be able to respond constructively and with good knowledge of the proposal.</p> <p>Finally, we are in a pandemic and a 3rd lockdown. The entire population is distracted with untold physical and mental health problems with hundreds of thousands also shielding with no access to family, friends and community that they usually would be able to learn about this from.</p> <p>It is therefore immoral to push a consultation through during such unprecedented times and urge you to stop the consultation. The statistics and figures need to be re-looked at, presented accurately and brought forward at a time when we are not in a national crisis.</p>

QUESTION ANY OTHER COMMENT comment	I feel there has been a deliberate lack of consultation of the development plans within the local community. Barriers have been created by the national lockdowns in terms of information relating to the proposals being readily accessible – especially to the elderly and vulnerable members of the community – and this has not been taken into account. Those that are not digitally competent or able to access means of digital communication have been restricted in their opportunities to express their views – surely this compromises the Dacorum Borough Council commitment to equal opportunities and inclusivity?

QUESTION ANY OTHER COMMENT comment	<p>It appears that this Plan is the result of:</p> <p>a) a national policy that uses outdated population growth statistics and an algorithm to calculate a housing quota far above the actual requirement for new housing in the area and</p> <p>b) a local policy of developer-led housing developments.</p> <p>Together these policies result in proposals to develop enormous tracts of Green Belt land with expensive, low density housing that is profitable for the developers but is comparatively much less sustainable than its urban equivalent.</p> <p>The Plans provide a way to meet a centrally set quota - but at enormous social and environmental cost to the residents of Dacorum who will see ancient towns like Tring and Berkhamsted altered forever.</p> <p>Meanwhile the real problem - the shortage of genuinely affordable housing and/or social housing remains unsolved.</p>

QUESTION ANY OTHER COMMENT comment	1	<p>Introduction</p> <ul style="list-style-type: none"> • The Local Plan document has been published for consultation under the Regulation 18 of the Local Plan Regulations (England) • This paper sets out my response to the consultation • It is acknowledged that a substantial amount of work has gone into the production of this draft Local Plan and all involved must be commended on the volume of work However it is considered that the draft Local Plan contains fundamental flaws in both the input premises (particularly with regards to the analysis of housing need for the period covered by the draft Plan) and in the analysis regarding sustainability, the site selection process, and the lack of a comprehensive infrastructure plan. • With the current government's drive to 'simplify' the planning process through a zoning approach, sites which fall within a zoning of presumed development would have a simpler and smoother path through to planning This makes it imperative to 'get the Local Plan right', as an ill-conceived Local Plan will result in poor development choices and decisions which will adversely impact generations to come far into the future. • We therefore have a duty of care to evaluate and critique this Local Plan thoroughly. It is in that spirit that the following comments are I trust that these very serious concerns will be treated with the gravity they deserve.

- The draft local plan is a substantial piece of work which has been produced by teams working over many years. It is neither reasonable nor realistic to expect consultees to comprehensively study and respond to this full body of work in the very short time allowed for this consultation. My comments therefore focus on and are limited to the key aspects of housing need, the site location analysis, sustainability (particularly with regards to the proposed location of new housing development) and transport. This is not to say that I support or disagree with all the other components of the plan. It is merely a reflection of what has been possible for me to evaluate in the limited time
- As a resident of a small hamlet immediately north of Hemel Hempstead, my comments focus on the influence and impacts that the draft local plan will have on both the countryside and the town of Hemel Hempstead.
- I am a resident and homeowner within the borough of Dacorum
- (personal detail removed)
- (personal detail removed)
- This Local Plan proposes a growth in housing need that is not supported by the latest statistical evidence. The proposed growth is therefore questioned and needs to be reviewed and revised. The revision to the growth in housing need should be properly supported by the latest scientific and statistical evidence.
- Understandably the Local Plan makes no allowance for the potentially considerable long-term effects of the coronavirus pandemic. These impacts could be substantial and long-lasting, and need to be better understood and accommodated, otherwise the Local Plan will cause ill-conceived outcomes.
- The Local Plan must be strategic in nature. This requires that it drives for the growth in housing development to be located in the **best** places from town and transport planning perspectives. The currently proposed Local Plan does not do this. It proposes development primarily in locations based on land that has been offered for development by private landlords or developers, with no consideration of strategic impact. The proposed locations for development are consequently often poorly located in terms of accessibility, transport and sustainability.
- The Local Plan claims as a strategic objective that it is committed to reducing carbon and greenhouse gas emissions. However the major development site locations proposed will have the opposite impact. If the Local Plan does not meet its own stated strategic objectives then it is by definition not fit for purpose
- 1 Conclusion

- (personal detail removed)
I submit that the Local Plan as drafted should be withdrawn for the following reasons, which are set out with more detail in the attached document:
-
-
- The Dacorum Local Plan (2020 – 2038) Emerging Strategy for Growth should be withdrawn for the following reasons.
- This Local Plan proposes a growth in housing need that is not supported by the latest statistical evidence. The proposed growth is therefore questioned and needs to be reviewed and revised. The revision to the growth in housing need should be properly supported by the latest scientific and statistical evidence.
- Understandably the Local Plan makes no allowance for the potentially considerable long-term effects of the coronavirus. These impacts could be substantial and long-lasting, and need to be better understood and accommodated, otherwise the Local Plan will cause ill-conceived outcomes.
- The Local Plan must be strategic in This requires that it drives for the growth in housing development to be located in the **best** places from town and transport planning perspectives. The currently proposed Local Plan does not do this. It proposes development primarily in locations based on land that has been offered for development by private landlords or developers, with no consideration of strategic impact. The proposed locations for development are consequently often poorly located in terms of accessibility, transport and sustainability.
- The Local Plan claims as a strategic objective that it is committed to reducing carbon and greenhouse gas. However the development site locations proposed will have the opposite impact. If the Local Plan does not meet its own stated strategic objectives then it is by definition not fit for purpose.

QUESTION ANY OTHER COMMENT comment	<p>I am writing to accompany my response to your consultation document and detailed comments are given below.</p> <p>By way of introduction however, I should say that I believe that the plan is misconceived, “supported” by specious arguments and makes assertions that are simply not plausible. Overall, it seems to be the result of the Council’s desire to curry favour with the Government by showing commitment to the execution of a central plan worthy of a Soviet Union regional apparatchik!</p> <p>The lack of joined-up thinking in connection with health provision is lamentable as is the failure to give proper consideration to the infrastructure issues that would attend the plan’s execution. Moreover, the track record of the Council in obliging private sector developers to contribute appropriately to the sustainability and amenity of the Berkhamsted community provides no re-assurance that the “upsides” of investment in the area will ever be delivered.</p>

QUESTION ANY OTHER COMMENT comment	<p>Lack of Proper Consultation</p> <p>To begin with I want to protest at the way this consultation has been conducted. My household has not received ANY communication from the Council about this Plan. No doubt because of the pandemic, there has been no public display or model showing housing or traffic movements consequent to the Plan. Despite a woeful lack of public engagement, the Council has pressed ahead with a process in a way which could be construed as avoiding public scrutiny. It is Putinesque and would probably be wide open to legal challenge.</p>

QUESTION ANY OTHER COMMENT comment	<p>As I said at the beginning of my comments, DBC have failed miserably to consult adequately about any of this Plan and the pandemic cannot be regarded as an excuse for not contacting every household about proposals which have such a major impact on their communities and quality of life.</p> <p>DBC have not engaged with BRAG in recent years even though they worked closely on the Core Strategy and the Public Enquiry. They do not reply to emails. As I know myself.</p> <p>This is not a council that is responsive or one that listens.</p>

QUESTION ANY OTHER COMMENT comment	I support everything said by the One Voice Alliance. I consider that there should be a moratorium on any further significant in housebuilding until the Borough has a healthcare system that is at least on a par with the national average and can then accommodate an increase in the population, and until there is a proper sustainable water and sewerage infrastructure that does not involve the desiccation of the local chalk streams and a cessation of our water supply in the summer months.

QUESTION ANY OTHER COMMENT comment	have concerns that the consultation period needs to be extended to allow all the residents to express their concerns. given the situation we have found ourselves in during the pandemic, and adhering to the rules laid down by Government, the oppurtunity to discuss with fellow residents the proposals and indeed share opinion has been severely restricted due to the lack of social interaction. Through my own experience i have spoken to friends who are aware of the proposals but are not however aware of the extent of the proposals, and i'm sure i'm not alone in this experience. Covid restrictions have prevented door to door, or on street canvassing to engage and inform residents of the proposals, and also prevented attending Council meetings, people meeting, discussing and considering responses to the local plan.

a considerable extension of the consultation period should be applied to allow full consideration by Dacorum residents of the impact of the proposals

QUESTION ANY OTHER COMMENT comment Whilst appreciating the extension of the deadline to end February 2021, this is nevertheless an extraordinary time in which to be consulting on developments so fundamental to the future of the town. People's focus is elsewhere while the COVID pandemic continues, and almost the entirety of the extension period has coincided with the 3rd lockdown - people with young families are having to juggle work, home-schooling and additional emotional support for our little ones and find themselves with very little time. I am someone who takes a great interest in local matters and is motivated to respond to such consultations, but even I am still responding in what are literally the last hours of the consultation being open. I fear many people are simply not aware or too exhausted to contribute. I urge the council to reconsider its consultation timescales further

QUESTION ANY OTHER COMMENT comment	The Council has insisted on proceeding with this consultation during the Covid-19 pandemic and has refused to rethink its approach or even extend consultation other than for a limited period. Not only has this made it difficult for many people to respond properly to the consultation, but it also means that the Council is consulting on proposals that will immediately become out of date, given the major changes to lifestyle and work patterns that are likely to result from the pandemic. The validity of this exercise is highly doubtful.

QUESTION ANY OTHER COMMENT comment	NOT FIT FOR PURPOSE It was generally felt that Consultation Comments Form response mechanism to the Emerging Plan Strategy was made purposely difficult to deter negative response to the plan. Below just a taster of the problems Parishioners have reported to me about the difficulties they have had in responding to the consultation. Other Parish Councillors had similar comment made to them. I had to resort to (name removed) in the Strategic Planning Team to get my response in. Whoever set up the 'Consultation Comments Form' did a very poor job and a great disservice to our Parishioners who ended up frustrated and furious in turn. Extremely concerned at the hurdles put in the way to HAVE YOUR SAY!

Parishioner comments cut & pasted from their emails to me:

I wonder whether Dacorum are hoping that people will just die on active service while attempting to respond to their proposals?!

Just to report that I have spent the evening fighting with the wretched keystone@objective.com version of the Dacorum Plan objections “form”. I prepared my answers in Word first – thank heavens. The website document was a complete nightmare to navigate and, interestingly, the wording of some of the relevant points (e.g. about the possible new road) was different on the website blurb from the version in the pdf document on Dacorum’s website...

Anyway, tis done – including telling them about 4 times that they should have used the 2018 ONS statistics.

Did my bit on the Local Plan – their format doesn’t make it easy does it!

You may want to try sending your message again to see if the problem was only temporary.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment	<p>Our client is supportive of DBC seeking to meet its housing needs through the new Local Plan. DBC cannot currently demonstrate a Five Year Housing Land Supply as confirmed by a recent appeal decision². Moreover, the Council's HDT 2020 (January 2021) score of 89%, further highlights problems with housing delivery rates and the requirement for an Action Plan to help boost housing delivery. Factoring in these considerations and past housing delivery issues, the Council should identify additional urban sites in Berkhamsted for new housing in the Regulation 19 Local Plan, including Land at 168-192 High Street, Berkhamsted.</p> <p>The Council should also adopt a more flexible approach to density should be taken, whilst also ensuring that land is optimised in accordance with paragraph 122 of the NPPF. This will ensure the Plan has been "positively prepared" and the housing strategy is robust in accordance with paragraph 35(a) of the NPPF.</p>

QUESTION ANY OTHER COMMENT comment

This plan will not allow Dacorum to meet it's climate targets, neither will it half biodiversity collapse. Most importantly the house building it proposes will not lead to improvements in quality of life or happiness for dacorum's inhabitation, either now or in the future. The is a local plan to allow developers to make large amount of money at the expense of the population. Dacorum council has declared a climate Emergency since the local plan process was initiated and therefore

needs to go back to the drawing board. It urgently needs a overarching zero carbon and sustainability strategy to outline how it can fulfil its obligations under its own Climate Emergency declaration and the national zero carbon targets. Then in light of this it should review its currently local plan in light of this new overarching strategy, which will likely be found to be inadequate. Dacorum therefore will need a new Climate Emergency local plan covering the next 10 years of the transition. For such a response to an appropriate emergency response to the urgency outlined in its climate emergency declaration both these steps need to be completed in the next two years, and all other priorities should go on hold until overarching zero carbon and sustainability strategy is in place. Evidence that climate change and biodiversity loss are emergencies:

<https://www.ipcc.ch/sr15/>

<https://www.ipbes.net/news/Media-Release-Global-Assessment>

The following clarifies UK's obligations within IPCC 1.5C carbon budgets, and that only path way one is a viable and safe option for humanity.

<https://www.cusp.ac.uk/themes/aetw/zero-carbon-sooner/>

Evidence that responding to emergencies requires not just putting something on the agenda, but taking everything else off the agenda and reviewing how it fits in with this new pressing issue.

https://www.greenhousethinktank.org/uploads/4/8/3/2/48324387/climate_emergency_plan_that_fu_cr_may20.pdf

Resources clarifying implications of the above for how our economy and governments (both locally and nationally should respond:

<https://www.greenhousethinktank.org/climate-jobs.html>

<https://www.greenhousethinktank.org/climate-emergency-economy.html>

<https://cat.org.uk/info-resources/zero-carbon-britain/research-reports/> <https://ukfires.org/absolute-zero/>

Due to urgency of response require and all encompassing nature of transition that is needed, it is highly recommended that council commission a citizen's assembly to shape the overarching strategy and then the subsequent emergency local plan:

<https://extinctionrebellion.uk/wp-content/uploads/2019/06/The-Extinction-Rebellion-Guide-to-Citizen-Assemblies-Version-1.1-25-June-2019.pdf>

QUESTION ANY OTHER COMMENT comment	Having lived in this town my entire life I have witnesses the removal and deconstruction of practically all of the best adult/family entertainment venues in this town - the Pavillion, countless pubs that hosted live music as well as social clubs, nightclubs, bars, arcades, swimming centres, bowling, pool halls, Quasar, and many others. To compound this, the population has grown significantly already and the residents are feeling it.

Not planning to provide social activities for residents is highly detrimental to people's mental, physical and social health. Planning to increase the population of the borough by an additional 50,000+ people without planning for these improvements will compound this issue even further. Residents need to be provided with a wide variety of options for things to do. There's only so many times you can go for a meal and head to the cinema.

High streets should no longer be focused purely on shopping, which is being driven out by online shopping, and instead should offer a range of entertainment venues for residents. This will provide jobs and bring high streets to life. Entertainment venues should be suitably sized. The Old Town Hall has a capacity of around 100 people. This is not suitable to cater for a growing town which will soon have a population to rival cities. Entertainment venues can cater for local groups such as amateur dramatics, local music festivals, open mic nights and then have the potential to draw in larger acts in terms of comedians, musicians and bands, theatre productions, etc.

After COVID, people will be craving and valuing these facilities more than ever before.

Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite.

Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.

Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.

All new buildings should be designed to meet the highest externally certified sustainability standards and to be at least net-zero carbon (including Scope 3 emissions). Examples include: Every property with a parking space to have an electric vehicle charger built into it. Every property to have a dual aspect to allow for natural ventilation. All new homes must incorporate solar PVs and other appropriate sustainable sources. No new building should be directly reliant on fossil fuels for heating (i.e. no gas boilers) and each home should collect rain water for toilets and store and re-use grey water. The homes must have top class insulation. These standards should be mandatory for all developers in the Local Plan.

- The 40% minimum affordable homes objective should be enforced across the Too often developers in the past have been allowed to waive their affordable homes commitments.
- Trees and woodland are very valuable to the environment and the community's physical and mental I welcome the commitment in the plan to retain existing trees but in order to compensate for any removal of green belt it is

vital that we seek a commitment that new mixed woodland and re-wilding, with public access, be planted close to, and be integral to, any new major development area.

- An increase in habitat for wildlife must be incorporated into any green field development areas including wildlife
- Recreational corridors should be incorporated within new built-up areas to promote cycling and pedestrian access through the development and provide connectivity with the existing town and the countryside These routes should not be limited to narrow, dark alleyways but should be several metres wide with natural vegetation to make travelling pleasantly airy and to support bio-diversity.
- The Local Plan should allocate land for new allotments for resident of new homes as well as laying out gardens to support 'Growing your own'(which is both sustainable and good for mental health)
- Public transport must be greatly improved both to connect these new homes to their town centres but also to reduce traffic congestion on the roads which cannot be Well connected and maintained dedicated cycle routes throughout our towns must be implemented along with secure bike storage.

Additionally, some people that I know received a leaflet through the door regarding the local plan. However, an equal amount of people I spoke to did not receive this - it is suggested this is picked up with your distribution company!

Yes / No * Yes * No	Yes
QUESTION ANY OTHER COMMENT comment	The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border

opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship

with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

QUESTION ANY OTHER COMMENT comment

9.0 These representations are made by Pegasus Group, on behalf of L&Q Estates, in response to the Dacorum Local Plan Emerging Strategy for Growth (2020- 2038) Regulation 18 Consultation. This representation relates to Land at New Mill, Tring, identified as proposed allocation (Tr03) in the emerging Plan.

9.1 L&Q Estates broadly support the emerging Plan and consider the Vision, spatial strategy and delivery strategy form a coherent basis for the Plan.

9.2 As set out above, the housing requirement should be adjusted to 1,023 dwellings per annum to reflect the standard method, now confirmed as retained by the Government. The approach of apportioning growth to the three main settlements along with larger villages is supported as a sustainable approach.

9.3 The Plan and accompanying evidence base have set out the exceptional circumstances for releasing land from the Green Belt. This is supported and Land at New Mill, Tring forms part of that justified release. L&Q Estates are keen to work with the Council as the evidence base develops, in particular to input into viability work as per the National Planning Practice Guidance.

9.4 Land at New Mill, Tring has been demonstrated as a highly sustainable location for development. The site represents a logical extension of the market town of Tring and complements the proposed allocation East of Tring (Tr01). Land at

New Mill has the ability to accommodate a significant proportion of the future housing needs of the area. It should therefore be released from the Green Belt for development.

9.5 Land at New Mill has been demonstrated to represent a suitable site to deliver approximately 400 dwellings having regard to the Council's evidence base and technical work undertaken on behalf of L&Q Estates which accompanies this representation.

9.6 L&Q Estates confirm that they have an interest in land at New Mill and it is their intention to bring forward development within the next five years. This would support delivery of housing in the early part of the Plan period while larger sites with longer lead-in times will follow.

9.7 This representation has set out how Land at New Mill is suitable, achievable and available for development. The site is therefore deliverable in the context of paragraph 73 of the NPPF.

9.8 Overall, it is considered that the proposed allocation of Land at New Mill and its removal from the Green Belt meets the tests of soundness, as set out at paragraph 35 of the NPPF.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further-preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a revision back to a strategy where upon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate

provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlement located elsewhere throughout the borough.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation wherein for example; the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

1. The timing of this consultation during a worldwide pandemic and national lockdown has disenfranchised the public. In particular, not allowing full access to the many people who do not have internet access. The DLP document is too large to access and navigate on mobile devices, which is what the majority of the public will be using to view.

The only other available option is to make an appointment to visit the library to see the documents. However, our government has told the public to 'Stay at Home to Save Lives'. Few will choose to risk their lives by booking in to view the DLP at the library.

QUESTION ANY OTHER COMMENT comment	<p>The Bulbourne is threatened by low flows and a recent Environment Agency study has concluded that unsustainable levels of abstraction for public water supply are contributing to low flows, and abstraction reductions have been proposed. In the summer of 2019 one leaking canal lock gate, at Lock 48, at Dudswell wasted 2.7 mega litres a day. That is equivalent to the daily use of water by the whole of Berkhamsted. The Bulbourne water quality is deteriorating, despite attempts at improving it. How will any development on this river help the river and all the natural wildlife surrounding it? I strongly object to any building work that mean the loss of such an extent of wildlife that includes Herons, Egrets, foxes, kingfishers, goldfinches, deer, crayfish, minnows, hedgehogs, squirrels and robins.</p> <p>Hedgehogs are classified by ICUN as vulnerable to extinction. They are protected in the UK under the Wildlife and Countryside Act, 1981; Priority Species under the UK Post-2010 Biodiversity Framework and the IUCN Red List for British Mammals. This sighting is now lodged on the Herts Environmental Records Centre database.</p> <p>As a chalk river, the River Bulbourne is of international significance and it falls into the category of a priority habitat under the Natural Environment & Rural Communities Act 2006 (S41). Many species living in it and along the banks rely on a sustained flow of water which is normal in a natural chalk stream fed partly by underground springs like the Bulbourne. A recent case study by 1S. Wilson provides evidence that the Rivers Bulbourne and Gade no longer behave as chalk streams should. He demonstrates that rapid rise and fall in the water levels are more typical of urban run-off than chalk streams and he observed flooding. Surface water running off hard-standing (roads, paths, rooftops, etc) is rapidly directed via drains into these rivers during periods of medium and high rainfall causing the water levels to quickly rise and fall. What should be clear water often becomes cloudy due to silt, rubbish and pollutants. Progressive silting and growth of vegetation in the water channels reduce the flow of water and increase the risk of flooding. - Will buildings and roads increase the probability of damage to the river ecosystem and some homes being flooded? As these rivers are of global</p>

significance, should the Local Plan incorporate measures to restore and protect them? Dacorum Borough Council have a duty to have due regard to the conservation of biodiversity under the Natural Environment and Rural Communities Act 2006 (S40). Those habitats and species which are of principal importance for the conservation of biodiversity in England are listed in Section 41 and include the House Sparrow, Cinnabar Moth and Great Crested Newt. s biodiversity likely to be increased, or diminished at the proposed development sites? What specific biodiversity, green infrastructure or compensating measures do you think should be recognised in the various site plans? Are Local Authority measures in place to ensure that developers adhere to a development plan after Planning Permission is granted and before any long-term biodiversity damage occurs?

Bank Mill Lane has only a handful of cottages - several listed buildings - and already there are traffic issues with cars overflowing from the Old Mill pub. There have been several near collisions on a road that is only wide enough for one car to drive down - and really should be one way. How will this road and indeed the bridge to Bank Mill sustain more cars and people? I can safely predict there would be deaths if this were to be the case.

Investment funds are being allocated to Hemel Hempstead for transport and amenity requirements associated with expansion of the town. Equivalent financial and infrastructure support is not being given to Berkhamsted and Tring.

I think the number of proposed developments across Dacorum is excessive and question the formula used to calculate it....

I am also concerned about families with sick children or elderly and disabled people trying to get to the Gossom's Road surgery where there is already inadequate parking? Trying to see a doctor prior to the pandemic was a near impossibility - how will the town cope with a huge influx of people, when there are already many elderly people living here who will need access to their local GP? Are we to simply never get to see a doctor as there will not be enough GPs to care for that many people...

I am deeply concerned about the strong Countryside / Green Belt boundary Impact on valley sides and important dry valley location.

Also I am worried about the encroachment of the urban area along the valley bottom and adjoining open countryside. Also the distance to town centre services and facilities, employment, land and station.

QUESTION ANY OTHER COMMENT comment

In addition to the comments above I believe that the consultation process has been inadequate.

The Plan (if adopted) will be in place for close to 20 years and represents housing growth across the borough of c.25%. Yet DBC has decided to rush through the consultation during a period of national lockdown which has made it impossible to promote proper awareness of the radical change to planning policy in the borough. During the previous consultation on the Issues and Options paper (2017), it was possible to engage directly with other residents in Northchurch to ensure that they were aware of the consultation (and this happened). That has obviously not been possible in the current situation. Nor does DBC appear to have publicised the consultation other than online: for example, no written materials referring to the consultation have been received at addresses directly alongside BK06, one of the locations slated for major development.

By contrast, in October 2020, Buckinghamshire Council withdrew the Chiltern and South Bucks local plan in part due to Covid-19, noting that a revised plan would be drawn up to "*reflect the considerable effect Covid-19 has had on areas such as shopping habits and town centres as well as changes to planning law*".¹¹¹ DBC's decision to push ahead with a draft plan in circumstances where, as the government has stated "*the way that the country lives, works and travels continues to change more rapidly than at any time since the war*", appears misguided, both from the perspective of ensuring that a proper consultation takes place, and from the perspective of the need to address the changes wrought on residents' way of life, and consequently our planning needs, by the pandemic.¹¹² As the government notes, "*This has implications, for example, on demand for commercial and retail floorspace in our cities and urban areas. We want our towns and cities to emerge from the pandemic renewed and strengthened – more beautiful, more healthy, more environmentally sustainable and more neighbourly places, with greater public and private investment in urban housing and regeneration*".¹¹³

The Plan and the associated evidence base comprises thousands of pages of material, and is not easily accessible even online, given the volume of material. That difficulty is exacerbated by the fact of home schooling (with households having limited access to devices, as well as the additional responsibilities that entails), and the stress and distraction caused by the overall situation.

These factors mean that the plan, and the consultation on it, can both be regarded as fundamentally flawed. In the circumstances, it is highly unlikely that the Plan is fit for purpose in view of likely social changes as a result of the pandemic, and any public response to the Plan is unlikely to be fully reflective of local views.

Conclusion

Residents have every reason to be outraged by the proposed Local Plan, which rides roughshod over legal protections for the Green Belt and the AONB, and will be hugely harmful for local quality of life. It is difficult to avoid the conclusion that DBC has (wrongly) treated the current government's aspirations to increase the national housing stock as an injunction, and failed to take account of the very great weight that it is required, under national planning policy, to give to the protection of the Green Belt and the AONB, for the benefit of current residents of the borough and indeed future generations.

The type of housing proposed is no doubt very 'viable' (a euphemism for profitable for developers), but is not the sort of development that DBC should be promoting - namely, to provide affordable accommodation within genuine walking distance of town centres. The fact that the consultation has been rolled out in a time of national lockdown, when national planning requirements are in a state of disarray, and in a time of huge social change that is likely to impact on the pattern and extent of housing need over the coming years, is also to be regretted.

The amount of work that has gone into the proposed Local Plan is obvious, and it is by no means the case that DBC needs to start again from scratch. There are many good things in the proposed plan. However, as a whole, the proposed plan is not fit for purpose. There are serious issues with the consultation process, the determination of local housing need, and the question of the extent to which it is realistic to satisfy that need given the legal protections of the Green Belt and the AONB (protections which DBC has, quite wrongly, treated as being of secondary importance to the need to meet its share of the government's house building targets).

It would be of the utmost imprudence to lock in a Local Plan which results in widespread destruction of Green Belt even after more realistic figures emerge of the actual housing need. As stated in the NPPF, plans should be "*sufficiently flexible to adapt to rapid change*".¹¹⁴ Removal of land from Green Belt protection is a permanent step, which will be to the grave detriment of wildlife, current residents, and future generations. The adoption of the proposed plan would be a tragedy. It is hoped that DBC will have the courage to step back from it and think again.

QUESTION ANY OTHER COMMENT comment	<p>We are instructed by Greene King Brewing and Retailing Limited to make representations on their behalf to the Dacorum Local Plan (2020-2038): Emerging Strategy for Growth. Specifically, we write with reference to land to the north of the Red Lion Public House on London Road, Hemel Hempstead. These representations request (1) the land is removed from the Green Belt and (2) the land is allocated a Growth Area for housing in the emerging Local Plan. A plan identifying the land in question is contained with this letter.</p> <p>At the outset, the Council's attention is drawn to the lack of clarity concerning the subject site and its designation on the draft Proposals Map. In particular, it is not clear whether the site is within or outside of the settlement boundary. The draft Proposals Map appears to show the site both within the settlement boundary of Hemel Hempstead and within the Green Belt with the two designations conflicting with one another.</p> <p>It is our view that the site should unquestionably lie within the defined settlement boundary of Hemel Hempstead. However, in the absence of clarity, this letter explains why we consider the site should <u>not</u> be within the Green Belt and why it should be allocated for housing.</p> <p><u>Site</u></p> <p>The site comprises an irregular shaped parcel of land that extends to an area of circa 1 hectare. It is located to the east of A4251 London Road, to the north of Nash Mills Lane and the Red Lion Public House, to the west of the River Bulbourne / Grand Union Canal and a recent residential development and to the south of an employment area. The site is generally flat and is considered suitable for development.</p> <p>Although the site appears within the Green Belt, it does not serve any of the five purposes for including land within the Green Belt. It is also entirely disconnected from the open countryside. Indeed, the site is most accurately described as an edge of urban area undeveloped greenfield infill site. There is in our view therefore no planning basis for the site being within the Green Belt and not being available for development, particularly given the current pressure and demand</p>

for land to meet future development needs within the main urban areas and particularly Hemel Hempstead. The site directly abuts employment development to the north and residential development to the east and a public house to the south. The wider area around the site is mixed in nature comprising a mix of residential, employment and commercial and retail uses. The site is in a highly sustainable location and accessible by a range of non-car modes of transport. It is also accessible to a range of local services and facilities and employment opportunities.

The site is entirely in the ownership of Greene King Brewing and Retailing Ltd and is not subject to any existing leases. It is not in an existing active use and thus is available for immediate development subject to the necessary the planning permission being achieved. Having regard to the location of the site on the edge of main urban area of Hemel Hempstead, it is considered a suitable and appropriate site for accommodating future development needs. Whilst the site is subject to a number of constraints, they are not considered insurmountable or barriers to the development of the site. The land thus represents a viable and entirely deliverable development opportunity.

Organisation Details	Tully Children's Fund
Agent ID	1270837
Agent Full Name	Sav Patel
Agent Organisation	Associate Director Strutt & Parker
Yes / No * Yes * No	
QUESTION ANY OTHER COMMENT comment	<p>Strutt & Parker have been instructed to submit representations on the Council's emerging growth strategy for the Dacorum Local Plan, on behalf of the Tully Children's Fund (TCF). The TCF owns land in Flamstead which is considered suitable for housing development and should be allocated for development as part of the emerging Local Plan.</p> <p>Dacorum Council is in the process of preparing a new Local Plan for the period 2020- Once adopted, the new Dacorum Local Plan will replace the Site Allocations Development Plan Document (2016), Core Strategy (2013) and 'saved policies' from the Dacorum Borough Local Plan (2004).</p>

This representation seeks to object to the proposed growth strategy in the emerging Local Plan which focuses on providing housing in a handful of locations. This loses sight of the significant role that villages such as Flamstead could make in facilitating growth on small and medium size sites. The National Planning Policy Framework (NPPF) supports the promotion of sustainable development in rural areas which is considered to be vital in survival of local services. The representation therefore also seeks to support growth in villages with small to medium size allocations.

Growth should be more evenly dispersed in order to achieve sustainable development in terms of minimising the inflation of house prices (creating hotspots), sustaining local businesses, creating inclusive and mixed communities, reducing the impact on the AONB, and mitigating climate change.

The NPPF states that there should be a presumption in favour of sustainable development in the plan making process. This means positively seeking opportunities to meet the development needs of an area and be sufficiently flexible to adapt to change. One of the key objectives for plan making is that plans should be aspirational but Positively prepared plans with feasible deliverability strategies are key tests of soundness.

The emerging Local Plan and the growth area policies are considered to be unsound, as it is not positively prepared or deliverable, which we will expand upon in further detail within this representation.

The allocation of large Growth Areas is not the most appropriate strategy when considered against the alternatives. The allocations are inappropriate in size and situated within unsuitable locations. The focus should be on the ability to deliver a higher number of smaller to medium sized sites that are capable of being delivered in the short to medium term.

Further consideration needs to be given to the housing need within Dacorum, such as accounting for the likely change to homeworking and increase in online shopping as a result of the COVID-19. This is likely to result in more demand for new housing throughout the Borough instead of a handful of large growth areas. A key objective of the Emerging Strategy for Growth (ESG) is to deliver balanced, mixed, and inclusive communities, and to give existing communities genuine access to a wide range of high- quality and affordable homes in locations where people want to live.

It is our strong view that the Growth Areas strategy should be removed from the plan, or at least the quantum of development reduced in the three larger allocations – namely Hemel Hempstead, Berkhamsted and Tring – in order for the ESG to be considered as The majority of the housing growth in Dacorum is tied up in these Growth Areas which is considered to be unsustainable, particularly when taking into consideration the potential changes to working and living patterns in a post-COVID environment.

Villages such as Flamstead are designated in draft Policy SP3 (Settlement Hierarchy) as ‘Small Villages within the Green Belt’ and are considered to be the least sustainable in the We also strongly oppose the wording of this policy as it does not accurately reflect the excellent and sustainable location of the village between Hemel Hempstead and Markyate and its adjacency to the M1.

Flamstead is an attractive village which benefits from a range of local provisions and community facilities such as three public houses, a village shop, a petrol station with shop, a village hall, two churches – including Leonard’s, a one-thousand-year-old church that is the core of village life, a village school that serves up to 120 children, and a cricket club and accompanying sports facilities. In order to protect the viability and vitality of the village and these local services it is important to commit some proportionate level of growth.

My client's sites were put forward for housing at the Call for Site's consultation in 2015 and were considered suitable for housing subject to Green Belt considerations (designated as WA/7 and WA/8). It is unclear why these sites were not progressed further by the Council.

QUESTION ANY OTHER COMMENT comment

The Emerging Local Plan is not suitable for examination. The further preparation of the plan requires substantial additional assessment to supplement the reconsideration of the evidence available; including more detailed assessment of housing supply requirements; the opportunities available for delivery within established settlement boundaries and the cross-border opportunities available within a Duty to Cooperate. It is clear that a substantial reassessment is required to inform an updated and better evidenced strategy. Exceptional circumstances have certainly not been identified in Framework terms so as to justify development of Green Belt land.

It is considered that a reversion back to a strategy whereupon Hemel Hempstead take on the vast majority of housing need subsequently calculated through an objectively assessed needs assessment would provide a more appropriate provision of development for the borough, taking into consideration the socioeconomic and physical infrastructure associated with Hemel Hempstead; the greater opportunity for substantially increased density provision of brownfield land and the reduced cumulative impacts upon the Green Belt and the reduced environmental impacts upon tightly constrained settlements located elsewhere throughout the borough.

Please don't make this decision and build on the Green Belt. This level of development for a small market town with our infrastructure is going to completely spoil the area and cause irreversible damage to wildlife and woodland areas. It is

going to have a seriously detrimental impact on the area and this decision cannot have been carefully thought through. Please reconsider.

If on completion of a satisfactory process of determining an objectively assessed need that it can be demonstrated against the expectations of Paragraph 137 of the Framework there is a requirement to allocate Green Belt land outside of the settlement of Tring, such a requirement should take into consideration the varying characteristics of the landscape surrounding the settlement and particularly its contribution towards the functionality of the Green Belt and its relationship with the Area of Outstanding Natural Beauty. In this regard greater consideration should be given to the density opportunities associated with a site or sites that can prove to be required to be brought forward for allocation, wherein for example, the current assessment of the opportunities available for site Tr01 Dunsley Farm, in its substantially reduced impact on the Green Belt by comparison to the sites East of Tring (Tr02 and Tr03).

Please don't make this decision and build on the Green Belt. This level of development for a small market town with our infrastructure is going to completely spoil the area and cause irreversible damage to wildlife and woodland areas. It is going to have a seriously detrimental impact on the area and this decision cannot have been carefully thought through. Please reconsider.

QUESTION ANY OTHER COMMENT comment	<p>Timing of preparation of draft local plan</p> <p>It is regrettable that the decision has been taken to prepare the draft local plan during the pandemic and resultant lockdown. There are many comments in the draft Arup “Dacorum Borough Landscape Sensitivity Study” to the effect that surveyors were prevented from accessing sites due to lockdown restrictions. This clearly reduces the reliance that can be placed on this draft report, where it is addressing such sites.</p> <p>Timing and adequacy of the consultation</p> <p>It is also remarkable, and highly regrettable, that DBC has proceeded with this consultation in the current circumstances. Lockdown has made it very difficult for residents to engage in discussions and to raise awareness of the proposed plan, and it has greatly impeded the flow of information.</p> <p>A significant proportion of residents, especially those who are elderly, do not have internet access and are therefore unable to obtain access the documentation regarding the proposed plan. There is a lot of anecdotal evidence that many residents are still completely unaware of the proposals, or have become aware at such a late stage that they have been precluded, by shortage of time, from making anything other than relatively brief responses.</p>

My understanding is that a leaflet was produced by DBC and delivered to some addresses within Berkhamsted, but it appears that a relatively small proportion of residents have received it. No such leaflet was delivered to my household, in Northchurch, an area highly affected by the proposals.

Moreover, the circumstances have made it extremely challenging for residents of the borough to focus on and respond to the proposed plan. Some residents will have been affected by illness or bereavement caused by the pandemic. Others, such as NHS professionals, will have been severely overworked in the period and will have been unable to give the consultation the time that it deserves. Yet others will have been distracted by childcare requirements, due to school or nursery closures.

My view, which I know to be shared by many other residents, is that DBC's decision to press ahead with and consult on the proposed local plan, during a national health crisis and a resultant lockdown, was at best misguided. At least one other local authority has had the good sense to retract its proposed development plan in response to the uncertainty created by the pandemic, noting that it has brought "significant changes to how and where we work, future shopping needs and our town centres".[1]

DBC should recognise that its consultation has not been adequate, and take the opportunity to withdraw the proposed local plan and modify it so that it is compliant with the NPPF.

Use of "spin" in the documents

It is also disappointing that there has been some recourse to "spin" in the draft plan and supporting documents.

Examples include all the references to "West Berkhamsted", where what is meant is the area known to all of its residents as Northchurch. Northchurch is a separate parish and, although joined to Gossom's End (which is in turn joined to Berkhamsted), it has its own identity. It is regarded by many of its residents as a village. In any event, it is not "West Berkhamsted". Many Northchurch residents wonder whether the term "West Berkhamsted" has been used to attempt to justify the enormous amount of proposed development in this area, on the basis that heavy development around the fringes of a market town may look, from a planning perspective, slightly less inappropriate than heavy development around the fringes of a village.

In the context of proposed development on Green Belt land, the numerous references in the plan and supporting documents to the "creation" of "green space" are transparent and patronising "greenwashing". What is being proposed is building over most of an existing green space and allowing a small part of it to remain as a (probably unusably

small and unappealing) public park. In no sense is that the “creation” of “green space”. It is the retention of a small scrap of it.

QUESTION ANY OTHER COMMENT comment

A general observation is that draft plan has not been accompanied by sufficient evidence and appears rushed. There are several conflicting statements and policies that do not combine to create a clear and transparent development strategy for consultation.

HLM is concerned that the development strategy is not robust and runs the risk of being found unsound by an examiner if it were to proceed to the Regulation 19 pre-submission stage unchanged. The Council is required to show a 5YHLS, with appropriate buffer upon adoption. It is required to provide evidence that the housing trajectory is achievable and that the myriad of urban sites, particularly within Hemel, are capable of being brought forward for development by 2038 and further, that they will deliver policy compliant levels of affordable housing to meet the identified housing needs for the borough in a sustainable way.

HLM considers additional land should be included for development to ensure that the plan is sufficiently flexible to adapt to changing circumstances and potential delays in bringing forward the first phase of HGC and the urban sites.

On the basis that a key part of the evidence base for Hemel Hempstead comprising the Transport Strategies and evidence to support Hemel Garden Communities that underpins the draft Local Plan vision and proposals is currently unavailable. In light of the current shortcomings, HLM would expect a further consultation of a revised draft plan prior to finalising the

Regulation 19 draft version. The Local Development Scheme should be updated to reflect this additional stage of consultation.

CONCLUSIONS

Overall, St William welcome and support the Council's positive and ambitious growth agenda, aligned as it is with a positive approach to design and placemaking and constructive policies for addressing sustainability and climate change issues. The changes suggested in these representations reflect the desire to ensure that the policy context positively encourages the delivery of development and, where appropriate, allows flexibility on a site by site basis, taking into account the viability of development.

St William look forward to working with the Council to bring forward the early development of the land at the National Grid site and engaging in the next stages of the Local Plan process.

QUESTION ANY OTHER COMMENT comment	1 The timing of this consultation during a worldwide pandemic and national lockdown has disenfranchised the public. In particular, not allowing full access to the many people who do not have internet access. The DLP document is too large to access and navigate on mobile devices, which is what the majority of the public will be using to

The only other available option is to make an appointment to visit the library to see the documents. However, our government has told the public to 'Stay at Home to Save Lives'. Few will choose to risk their lives by booking in to view the DLP at the library.

QUESTION ANY OTHER COMMENT comment Whilst it is acknowledged that the Development Strategy that is being promoted within the Emerging LP will inevitably require the release of land from the Green Belt, including the land at Grange Farm in Bovingdon, it should be reiterated that, in general, BPC is opposed in principle to the release of such land in advance of the redevelopment of previously-developed land which should be preferred in the first instance and as required by Government guidance in the NPPF.

That said, it is acknowledged that the Borough Council has a difficult task in that regard with a significant proportion of the Borough being covered by the Green Belt, and the release of Green Belt land around the most sustainable urban areas and other settlements in the Borough should always be undertaken in the first instance.

QUESTION ANY OTHER COMMENT comment	<p>Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012, requires Dacorum Borough Council to notify residents and other persons carrying on business. Dacorum's consultation process does not comply with these regulations. On the contrary, many people in Northchurch have either not heard of the consultation or have no means of responding.</p> <p>Many homes in Northchurch did not receive Dacorum's brochure. During the extended period of the consultation, residents from Northchurch and surrounding streets, including some parish councillors have told us that the brochure has not been delivered to their street including Granville Road, Cowslip Meadow, Lyme Avenue, The Meads, Darrs Lane, Northchurch High Street, Tring Road, Covert Road, Covert Close, Compass Point, New Road, Wharf Lane, South Bank Road, Chaucer Close, Kings Road Berkhamsted, Westfield Road, Durrants Lane, Pages Croft, Haynes Mead, Bridle Way, Edlyn Close and Winston Gardens. Additionally, the hard copy directs residents to the DBC website but does not provide the full information required for a resident to a return a meaningful response.</p>

Northchurch has a high percentage of elderly residents who do not access information online or via social media and know little of nothing about Dacorum's plans. Many residents do not have access to the devices that they need to consult the documents and are therefore excluded. Journeys to libraries are non-essential, unlawful and cannot reasonably be advised. In normal circumstances, Northchurch parish councillors would distribute leaflets detailing the plans for Northchurch to all our households, but Lockdown rules have prevented us doing this. One example from an elderly local man illustrates the difficulties faced by elderly and disabled residents:

"I moved area in 1959 and took part in a consultation on building on the field behind Chaucer Close at that time by attending a meeting in Sunnyside Church Hall. But I have not received any information notifying me of the current consultation. I have no IT. I cannot travel to a library because I am disabled, and I live alone. I would like to participate in the consultation, but it is not possible because the current lockdown restrictions say I should only do essential journeys."

Meaningful consultation would reveal that virtually everyone in Northchurch believes that Dacorum's Plan does not recognise Northchurch and does not meet the needs or aspirations of local people. It will undermine their quality of life, harm their physical and mental wellbeing, and cause irreparable damage to the Green Belt. Northchurch Parish Council would like this plan to be withdrawn and replaced with a new plan based on an up-to-date assessment of housing needs that reflects the views of the people of Dacorum.

In conclusion the Local Plan:

- Is unknown to many residents due to lockdown restrictions
- Is deeply unpopular with those residents who are aware of it
- Uses out-of-date, 2014 housing projections which are much higher than current projections
- Prioritises housing targets above the Green Belt, climate change, sustainability, biodiversity and public health
- Does not meet the need for social housing
- The population increase in Northchurch (over 50%) will cause overcrowding and congestion
- Will destroy 40 acres of Green Belt in Northchurch, and 21,000 acres across Dacorum
- Is not compatible with the Sustainability Appraisal
- Will damage the River Bulbourne
- Will harm the physical health and mental wellbeing of local people
- Fails to protect the distinct community, history and rural character of Northchurch
- Allows Northchurch to 'sprawl' into Berkhamsted
- Fails to maximise the use of brownfield land for housing
- Fails to provide the infrastructure needed to cope with increased demand
- Fails to provide each development with a traffic management plan

QUESTION ANY OTHER COMMENT comment	<p>Having lived in this town my entire life I have witnessed the removal and deconstruction of practically all of the best adult/family entertainment venues in this town - the Pavillion, countless pubs that hosted live music as well as social clubs, nightclubs, bars, arcades, swimming centres, bowling, pool halls, Quasar, and many others. To compound this, the population has grown significantly already and the residents are feeling it.</p> <p>Not planning to provide social activities for residents is highly detrimental to people's mental, physical and social health. Planning to increase the population of the borough by an additional 50,000+ people without planning for these improvements will compound this issue even further. Residents need to be provided with a wide variety of options for things to do. There's only so many times you can go for a meal and head to the cinema.</p> <p>High streets should no longer be focused purely on shopping, which is being driven out by online shopping, and instead should offer a range of entertainment venues for residents. This will provide jobs and bring high streets to life. Entertainment venues should be suitably sized. The Old Town Hall has a capacity of around 100 people. This is not suitable to cater for a growing town which will soon have a population to rival cities. Entertainment venues can cater for local groups such as amateur dramatics, local music festivals, open mic nights and then have the potential to draw in larger acts in terms of comedians, musicians and bands, theatre productions, etc.</p> <p>After COVID, people will be craving and valuing these facilities more than ever before.</p>

Growth is not compatible with sustainability. A simple and very basic fact. The Earth is finite.
 Our housing needs are changing as the population ages and this should be reflected in all future plans. The number of new houses proposed in the plan should be substantially reduced.

Dacorum should implement a local plan that includes firm and ambitious sustainable commitments.

QUESTION ANY OTHER COMMENT comment	I don't believe the consultation has been fair as I have not received, along with numerous other residents, the information packs some households have received. I do not receive free local papers and during the lockdown have not been out to see any information that may have been available (ie library). Luckily I have access to the internet and saw this information on Facebook but strongly feel something of this importance should have been more widely distributed, after all not everyone has access to the internet and with homeschooling lots of tools/time has been taken up. Therefore I believe the consultation period should be extended to ensure all residents are consulted and have time to respond.

Yes / No * Yes * No	
QUESTION ANY OTHER COMMENT comment	<p>Representations Submitted on behalf of Fairfax Strategic Land (Hemel) Ltd</p> <p>We refer to the above consultation exercise and respond on behalf of our client, Fairfax Strategic Land (Hemel) Ltd, setting out a number of representations upon the Dacorum Local Plan Emerging Strategy for Growth (2020 – 2038) Consultation (the Emerging Strategy), including in relation to the omission of land located west of Piccotts End,</p>

Hemel Hempstead (LPA Site Assessment Ref HH69) as a housing allocation for up to 400 dwellings in helping to meet identified housing needs during the plan period.

The following plans and documents are submitted in support of our representations:

- Site Location Plan 1920-PL01 Rev A
- Indicative Site Layout 2037-PL04 Rev.G
- Landscape Assessment (Hyland Edgar Driver) (Feb 2021)
- Green Belt Assessment (CSA Environmental) (Feb 2021); and
- Highways and Accessibility Technical Note: Suitability of Land west of Leighton Buzzard Road, Hemel Hempstead and Analysis of Draft Housing Allocations (SK Transport) (Feb 2021).

The content of the supporting plans and particulars is set out below where relevant to the particular issue/discipline being addressed.

Land located to the west of Piccotts End, Hemel Hempstead is controlled by Fairfax Strategic Land (Hemel) Ltd extends to approximately 26ha (Site Assessment Ref HH69) and could provide for up to 400 dwellings.

The land comprises an available, suitable and deliverable opportunity to accommodate housing needs (both market and affordable), in a sustainable location, within the industry standard recommended walking and cycling distances from local services and facilities, including the significant retail, employment, community facility and leisure offer available in the town centre.

In addition, the ability to extend existing bus services into the site further serves to underpin the site's excellent sustainability credentials.

Development of the site for housing provides the opportunity to create a new planned expansion to Hemel Hempstead, and will include a CIL payment and/or commuted sum to be secured through a site-specific planning obligation to enhance the overall offer at Rossgate local centre; thus benefiting the wider community with an enhanced social offer.

The site's proximity to existing local centre, other local facilities as well as Hemel Hempstead town centre demonstrates the sustainability merits of the site for housing when set against the Council's on-going housing need.

A bus stop and turning loop has also been incorporated into the Indicative Site Layout, the provision of which has support from an established local bus provider having and they have confirmed they are willing to use the loop should permission be granted.

Notwithstanding the location of the site within the Green Belt, the character of the site is heavily influenced by the suburbs of Gadebridge, Piccotts End and other surrounding development including the electricity sub-station and garden centre beyond to the north.

The site offers the opportunity to provide a material contribution to the Borough's pressing and on-going housing need and do so in an appropriate manner without impacting upon the wider countryside surrounding Hemel Hempstead. As explained later in these representations, the site is ideally located to be brought forward for development in the early stages of the plan period, and/or in helping to meet a shortfall in the five year supply of deliverable land.

The land has inherent sustainability merits which make it suitable for residential development, and in our view represents a development opportunity providing a logical rounding off to the north of Hemel Hempstead with limit impact upon both the landscape and Green Belt purposes.

For the reasons set out in our submissions there are a number of fundamental shortcomings with the approach to site selection in the Emerging Local Plan Strategy that result in the need for amendments if it is to satisfy the tests of soundness at paragraph 35 of the NPPF.

Based on our assessment of the evidence base that has been used by the Council to underpin the approach to site selection, the Emerging Strategy cannot be said to be justified in so far as it fails to represent an appropriate strategy and nor does it adequately take account of the reasonable alternatives.

This is particularly the case for the approach to site selection at Hemel Hempstead.

We have undertaken a comparative analysis of the draft allocations proposed by the Council, including the 3 no. draft site allocations at Hemel Hempstead, comprising HH-h1b – North of Hemel Hempstead (phase 1), HH-h1b – North of Hemel Hempstead (phases 1 and 2) and HH-h2 – North of Gadebridge (Land at Piccotts End) and conclude that on a proper consideration of the evidence base the Emerging Strategy should have identified our client’s land at Piccotts End as a housing allocation(s).

Our representations focus on specific parts of the Emerging Strategy as follows:

- **Policy SP4: Delivering the Housing Strategy**

The consultation draft Local Plan sets out a need to plan for a significant level of growth, including in the form of urban extensions and Green Belt releases. This includes a significant amount of planned growth at Hemel Hempstead. The spatial strategy has purportedly been informed by a number of evidence base documents. They include, but are not limited to:

- Housing Topic Paper
- Site Selection Topic Paper
- Site Assessment
- Sustainability Appraisal
- Green Belt Study
- Highway Studies

Our detailed representations are set out below and include submissions in response to the content of these evidence base documents, including, inter alia, the Site Assessment (prepared by AECOM alongside the Topic Paper) and the Sustainability Appraisal (“SA”).

QUESTION ANY OTHER COMMENT comment	<p>In preparation of the Regulation 19 Draft Local Plan, we encourage you to draw on the knowledge of local conservation officers, the county archaeologist and local heritage groups.</p> <p>Please note that absence of a comment on a policy, allocation or document in this letter does not mean that Historic England is content that the policy, allocation or document is devoid of historic environment issues.</p>

Finally, we should like to stress that this response is based on the information provided by the Councils' in this consultation. To avoid any doubt, this does not affect our obligation to provide further advice and, potentially, object to specific proposals, which may subsequently arise as a result of this plan, where we consider that these would have an adverse effect upon the historic environment.

If you have any questions with regards to the comments made then please do get back to me. I would be very happy to meet to discuss these comments further. In the meantime we look forward to continuing to work with you and your colleagues.

QUESTION ANY OTHER COMMENT comment

I am also very concerned that many of us have been unaware of the full extent of the situation, and if they knew would be equally as appalled.

People have not always got the time, energy, or means to stand up against such political decisions. Yet this seems even more under-hand as this has been pushed through during a time of national pandemic, when people have been asked to stay at home, shield, isolate and are generally suffering the blow to both physical and mental health. Communication means have not been normal and we have all had many other concerns to face during this period. This feels as though things are moving forward with very little consultation, as during this year of pandemic, people have needed to focus on problems within their own households, not having the ability to socialise and therefore learn of the local news, and no time to research into any rumours that we might have heard about proposed building. This is not giving residents of Northchurch, Berkhamsted and Tring and surrounding areas enough time nor ability to respond.

I want to know exactly how many acres of Greenbelt land would be lost, and how much our population would increase. There needs to be honesty and transparency in these proposals, and the opportunity for each and every resident to have their say.

Please can you reconsider this proposal for development and look at the impact on your beautiful towns and villages and the people that live in them.

QUESTION ANY OTHER COMMENT comment	<p>I wish to protest about holding the public “virtual” consultation on the above contentious issue <i>in the middle of a major pandemic!</i> It has not been given much publicity – I only heard of it via word of mouth and local private mail drops. Due to a lack of IT knowledge/equipment (mine does not support viewing maps, etc on your site) a huge swathe of the local population is excluded and from the little</p> <p>I've seen, the current population of Tring has been grossly understated on the documents. The DBC web site is complicated, not user friendly, requires registration and up to date IT knowledge to navigate - these issues, together with severe restrictions on attendance, make the whole process totally undemocratic and dictatorial. A common pattern when the Council/Government wish to push changes they know to be unpopular, unwanted and controversial! (Personally I believe the plans have already been privately agreed by the Housing Minister & Council members and this public consultation merely a pretence to add credence when final decisions are announced) I will try to make my objections as brief as possible.</p>

QUESTION ANY OTHER COMMENT comment

The Chiltern Countryside Group (CCG) welcomes the opportunity to respond to Dacorum Borough Council's (DBC) Local Plan Emerging Strategy for Growth 2020-38 Consultation February 2021.

CCG is an independent local community Action Group established in 2008 with supporters throughout the Chilterns. Its mission statement is: '*Preserving the peace of the Chilterns*' and our response to this Consultation is made from that perspective.

The CCG is a member of the 'One Voice' Alliance and joins with these organisations in opposing the DBC Local Plan 2020-38 and in making this statement:

"We, the Chiltern Society, Chiltern Countryside Group (CCG), Grove Fields Residents Association (GFRA), Berkhamsted Residents Action Group (BRAG), Kings Langley & District Residents Association (KL&DRA), Berkhamsted Citizens Association and Tring in Transition as the 'One Voice' alliance, oppose the 'Dacorum Local Plan - Emerging Strategy for Growth' because:

1 *Whilst the policy on biodiversity is clear, the emerging plan is not explicit enough in terms of **how** Dacorum Council will work with developers and other stakeholders to mitigate Green Belt loss, increase biodiversity and meet National and Hertfordshire's goals for climate change and carbon reduction.*

1 *The proposed number of houses to be built should be significantly lower than the target to reflect **actual demonstrable need** for housing and the high proportion of Green Belt and AONB land in Dacorum, with a primary focus on affordable starter*

1 *A higher proportion of the houses should be built on brownfield land, or established through conversions, in the existing urban areas of Hemel Hempstead, Tring, Berkhamsted and Kings Langley, and **away from areas located in the Green Belt** (which should only be used in exceptional circumstances) and the Chilterns AONB and its*

While not members of the Alliance, the Chilterns Conservation Board and CPRE Hertfordshire are working closely as advisors to the One Voice alliance."

The Group submits its response below to each of the Questions posed in the Consultation.

CCG requests that the contents of its submission are taken fully into account by DBC in further consideration of the proposals contained within the 2020-2038 Local Plan (LP).

- The CCG finds that this Consultation has failed to meet consultation principles. The Consultation was announced in December 2020 and has been running during a period of Covid19 'lockdown', which has disenfranchised many residents, particularly the elderly, those without access to or skills with IT, the infirm and/or vulnerable.
- Meetings, both public and private are banned, travel is limited to the 'essential' and many people are 'shielding', which affects their ability to have proper, lawful access to We are advised that documents are available to view at local libraries, which have reduced opening hours, or by appointment at The Forum, Hemel Hempstead, but these are not viable options for someone who is medically 'shielding'. Distribution of the DBC leaflet, which 'markets' the LP, rather than providing detailed information, has been patchy and we are not confident that all DBC residents will have received this very basic pamphlet.

QUESTION ANY OTHER COMMENT comment	<ul style="list-style-type: none"> • These representations have been prepared by Turley on behalf of our client, Thakeham Homes Ltd (Thakeham), in respect of the current consultation on the Dacorum Local Plan (2020-2038) Emerging Strategy for Growth • Thakeham is promoting Land east of Berkhamsted (known as ‘Bulbourne Cross’) as a new sustainable neighbourhood comprising circa 1,000 homes, circa 32 acre sports hub, a primary school, a country park and a village centre including shops, offices, a community hub and village green with pavilion and supporting infrastructure as an alternative to Dacorum Borough Council’s (the ‘Council’) proposed growth • Each of our responses relates to a particular policy or paragraph and this report is structured This Statement is supported by the following documents: <ul style="list-style-type: none"> • Bulbourne Cross Evolution Document, February 2021 • Bulbourne Cross Green Belt Technical Note, February 2021 • Bulbourne Cross Initial Baseline Landscape & Visual Appraisal, February 2021 • Bulbourne Cross Effect on AONB Technical Note, February 2021 • Initial Transport Appraisal, February 2021 • Statement of Community Engagement, February • It is understood that a further round of consultation will be held on the Local Plan prior to its proposed submission to the Secretary of State. We look forward to continuing to engage with the Local Plan process and would welcome the opportunity for further discussions with the Council to discuss our representations and the opportunity which Bulbourne Cross represents.

- Thakeham does not just build houses; Thakeham is a zero carbon, infrastructure-led community creator and is committed to delivering new, extraordinary places, where the highest attention to detail makes a positive difference.
- Thakeham builds for the future, for communities and for Each development is different and tailored to its locality, with careful consideration of the area's character, as well as the environment. As a community creator first and foremost, Thakeham's commitment to improving on existing social landscapes and mental/physical wellbeing means its schemes are infrastructure led and zero carbon in terms of both design and construction ; engaging with transport, healthcare, utilities and other stakeholders from the start of a project. The delivery of new homes facilitates the delivery of physical, social, blue and green infrastructure which benefits the wider surrounding area, as well as the new residents, and ensures that Thakeham creates sustainable places to live, work and relax. At every stage, Thakeham's approach is one that ensures they leave a legacy behind that everyone can be proud of.
- Thakeham is the first housebuilder in the UK, and one of only five in the construction sector globally to have made commitments on the SME Climate Hub to join the United Nations' Race To Zero campaign. The commitment Thakeham has made joins Thakeham's already industry leading commitments that from 2025 all Thakeham Homes will be carbon neutral in production and zero carbon in lifetime use.
- Thakeham is one of only 12 organisations selected to become a member of the Healthy New Towns Network, which is a collaboration between NHS England, Public Health England, Housing Developers and Housing Associations. Thakeham is also a member of the Home Builders Federation, sitting on its Future Homes Taskforce as an exemplar business, for our leading work in Zero Carbon Placemaking. Thakeham has recently been acknowledged for its high-level commitment to advancing sustainability within the industry by the Supply Chain Sustainability School (SCSS). The award of Gold membership acknowledged Thakeham's use of the resources as a method of ensuring continuous sustainability improvement across the wider supply chain. Further details about Thakeham's different approach and commitments can be found in the Evolution Document that accompanies these representations.
- We support the Council's vision for the Borough which recognises the challenges and opportunities which exist over the Plan period to 2038. As emphasised by the Vision, to achieve this it will be critical that balanced communities are delivered with the homes, jobs and supporting infrastructure needed all to be

- Policy SP2 sets out the Council’s proposed Spatial Strategy and how this is to be Amongst other elements, the Policy identifies that the Plan will make provision for a minimum of 16,596 homes over the period between 2020 and 2038, equivalent to 922 homes per annum.
- On 16th December 2020 the Government published the results of its new Standard Methodology (following the previous consultation version in August 2020). This new Standard Methodology sets a minimum annual requirement for Dacorum of 1,023 dwellings per annum. Clearly whilst the Council was not able to reflect this in the current consultation version of the Local Plan, future iterations will need to respond to this increased minimum requirement and ensure the Local Plan is preparing to meet these needs.
- Accordingly Policy SP2 must be updated to include a requirement for provision of a minimum of 18,414 homes over the Plan period. Additional allocations will therefore be required in order to deliver the 1,818 additional dwellings now required over the Plan
- Thakeham is promoting Land east of Berkhamsted (known as ‘Bulbourne Cross’) as a new sustainable neighbourhood comprising circa 1,000 homes, circa 32 acre sports hub, a primary school, a country park and a village centre including shops, offices, a community hub and village green with pavilion and supporting infrastructure as an alternative to Dacorum Borough Council’s proposed growth
- As has been clearly demonstrated through the critique of the proposed allocations and comparison to Land east of Berkhamsted as set out in Section Two and Appendix One, the site represents a sustainable location for an extension to the town. The proposed development would provide significant benefits which can only be delivered through a development of a greater scale than proposed through the piecemeal approach to allocations that the Council currently proposes. The benefits of the vision for Bulbourne Cross are set out below and supported by the accompanying Evolution

1.7 The site should be proposed for allocation to help meet the needs of the Borough and proposed policy wording is provided at Section Four of this statement.

- We look forward to continuing to engage with the Local Plan process and would welcome the opportunity to discuss with officers the opportunity at Bulbourne Cross as well as our more detailed comments on the Local Plan as currently drafted

QUESTION ANY OTHER COMMENT comment	<p>The current coronavirus pandemic has shown how important green spaces are for recreation and daily exercise. The proposal for such a high number of homes in Tr01, Tr02 and Tr03 will increase pressure on the existing greenspaces. One such green space is an existing wildlife site, Cow Lane Farm Meadows, which lies within Growth Area Tr01. There is an existing public footpath across these meadows from Station Road to the A4251. The footpath and meadow through which it runs should be left as is in view of its proximity to the heavy housing density planned nearby. Before further planning through the whole wildlife site should be subject to extensive survey at all times of the year. Several species of uncommon fungi for example have been noted on the site.</p> <p>Improving Station Road in the belief that the proposed additional housing will mean that more people will wish to commute to London may also be an incorrect assumption. I say this as it is likely that as a consequence of the coronavirus pandemic already more people have learned how to work from home. There are also local offices by the Court Theatre in Station Road which provide a base for home working.</p> <p>Where possible provision should be made for increasing areas suitable for pollinating insects by creating local native wildlife areas both near buildings and in land to be retained as green space. Wildlife sites though should not be altered.</p>

QUESTION ANY OTHER COMMENT comment	Due to lock down we have had great difficulty trying to survey the suggested sites but completed 90% by close this afternoon. Unfortunately we had a major issue with your form that we needed to complete to email across to you. I could find no way whatsoever of adding a page and after completing the first three areas, every single time I started to type, the page would jump back up to the top so I could not see what I had just typed and would totally lose my train of thought. Instead of it taking me around an hour it's taken most of the evening as I had to keep scrolling down to see where I was and if I had typed certain road names correctly etcetera - I have taken a video and can send this on to you if required. It was hugely time consuming and very frustrating after all the time we have spent surveying. We would therefore like this matter to be raised and to ask for Dacorum to consider our findings, including the following paragraph which was missed from my first submission due to the page continuously jumping back to the top of the page – this paragraph should have followed

QUESTION ANY OTHER COMMENT comment	The following paragraph which was missed from my first submission due to the page continuously jumping back to the top of the page – this paragraph should have followed Large site between Westwick Road and A414/M1 no issues currently.

'Large site between Westwick Road and A414/M1 no issues currently.' ... This should have then read ... The site inbetween Westwick Row and the A4147 and the area surrounding the A4147 in between the junction of Westwick Row and the M1 has had numerous badger fatalities (this can be confirmed from the badger road casualty density map which was completed by the Herts Environmental Record Centre) - this points to there being setts in the adjoining area. Unfortunately we were unable to complete surveys of the 2 woods due to lockdown, but it is important to note that should there be setts within the woods and the site is fully developed, this would result in an even larger increase in fatalities as the badgers would be isolated between the development and the A4147 and any subsequent foraging ground removed exacerbating the situation. We will fully survey the area and advise you as soon as possible of our findings, but would ask that should this be the case and development be pursued for this area, that you will allow us to work with you so that full mitigation can be put in place including corridors adjoining habitat, meadows are incorporated around the woodlands and that badger fencing is installed along the A4147 with any necessary tunnels to avoid an increase of fatalities.

QUESTION ANY OTHER COMMENT comment To make matters worse I was then unable to download your form so I copied the whole of my text and sent an email to yourselves in the allotted time as just draft text. I was then able to download the form as a pdf and sent that immediately after which is obviously much easier to read than the draft text version, unfortunately this was just after 11.59.

We indicated that with the majority of the sites we did not find major issues in regards to badgers; we have also indicated what sites would need mitigation. We do have a huge concern with the largest Tring site and have written about this in our submission in that a large corridor would need to run between the site and canal (width of field) across the length of

development. We also have a huge concern with the area north and north east of Hemel due to the amount of badger setts, a concern with the thin strip between residential areas at Leverstock Green and the area around the A4147.

We hope that our issues can be taken into account and that you will accept our submissions. Please advise if you would like me to forward the video on to you in regards to the issues with the form. We look forward to working with you on your emerging local plan.

QUESTION ANY OTHER COMMENT comment

- 1 The Berkhamsted Town Council (BTC) recognises that there are a number of sites within the town which are likely to be proposed for development as part of the current and upcoming Local Plan process.
 - 1 Accordingly, the Council has given thought to and agreed a number of principles it would like to see adhered to and reflected in DBC policy as the specifics of the proposals are
 - 2 These principles are largely driven by the recognition that our commitment to action to address the climate emergency, must be carried through into practical measures and that we must not allow building which will further add to our town's carbon footprint or contribute to further environmental degradation.
 - 3 They are also driven by a desire to build strong and resilient neighbourhood communities within the town and to ensure that adequate infrastructure is in place to allow for a thriving public realm and good quality of life for existing and future
 - 1 The principles outlined in this paper are necessarily high level and we recognise that they will require translation into specific standards and detail. At this time, BTC wishes to place on record its aspiration that any new development should conform to the highest current standards of environmental sustainability and should promote integrated

4 The following comments relate primarily to new development as that is what is most likely to come through into the Local Plan but the principles could equally well apply to brown field development

Site Specific Representations - Land at Fox Meadow, Bovingdon

Thakeham Homes Ltd ("**Thakeham**") is writing in respect of Dacorum Borough Council's ("**the Council**") Local Plan Emerging Strategy for Growth 2020-2038 Consultation (November 2020

– February 2021) ("**the draft Local Plan**"), specifically in relation to the Land at Fox Meadow, Bovingdon ("**the Site**") which Thakeham proposes should be included as an allocation for residential development in the emerging draft Local Plan. These representations also raise significant concerns with the Council's approach to growth in Bovingdon as well the proposed site allocations. A site location plan is included in Appendix 1, together with a Vision Document (in Appendix 2) demonstrating the suitability of the Site and how Thakeham intends to deliver a tailored development for Bovingdon. A Statement of Community Involvement is included as part of this submission under Appendix 3.

About Thakeham

Thakeham is a zero carbon, infrastructure-led community creator, committed to delivering extraordinary places, where the highest attention to detail makes a positive difference.

Thakeham builds for the future, for communities and for individuals. Each development is different, with careful consideration of the area's character, as well as the environment. As a community creator first and foremost, Thakeham's

commitment to improving on existing social landscapes and mental/physical wellbeing means its schemes are infrastructure led and zero carbon in terms of both design and construction. Thakeham engages with transport, healthcare, utilities and other stakeholders from the start of any project. Our delivery of new homes goes hand in hand with the delivery of physical, social, blue and green infrastructure, benefiting the wider surrounding area, new and existing residents, and ensuring that Thakeham creates sustainable places to live, work and relax. At every stage, Thakeham's approach is one that ensures they leave a legacy behind that everyone can be proud of.

Thakeham is the first housebuilder in the UK, and one of only five in the construction sector globally to have made commitments on the SME Climate Hub to join the United Nations' Race To Zero campaign. The commitment Thakeham has made joins Thakeham's existing commitments that from 2025 all Thakeham Homes will be carbon neutral in production and zero carbon in lifetime use.

Thakeham is one of only 12 organisations selected to become a member of the Healthy New Towns Network: a collaboration between NHS England, Public Health England, Housing Developers and Housing Associations. Thakeham is also a member of the Home Builders Federation, sitting on its Future Homes Taskforce as an exemplar business, for our leading work in Zero Carbon Placemaking. Thakeham has recently been acknowledged for its high-level commitment to advancing sustainability within the industry by the Supply Chain Sustainability School (SCSS). The award of Gold membership acknowledged Thakeham's use of the resources as a method of ensuring continuous sustainability improvement across the wider supply chain. Further details about Thakeham's different approach and commitments can be found in the Vision Document that accompanies these representations.

These representations are split into the following sub-sections;

- Overarching Vision for Dacorum's Growth by 2038
- Vision for Bovingdon and Bovingdon Delivery Strategy
- Chesham Road/Molyneux Avenue
- Grange Farm
- Land at Fox Meadow

Conclusion

These representations incorporate Thakeham's comments on both the draft Local Plan Guiding Development policies and the proposed site allocations within Bovingdon. As demonstrated above within these representations, Thakeham raises concerns to the Council's approach to growth in the Borough, especially in Bovingdon, as well as identifying issues with the deliverability of the Council's proposed Bovingdon site allocations.

Thakeham respects the sensitive nature of the removal of Green Belt sites and is of the view that, whilst removal is justified by the pressing need for new housing, sites need not only to provide new homes, but also new community facilities. Thakeham considers that the proposed Borough allocations are insufficient to meet the required housing need under the Government's standard methodology, and that additional sites need to be allocated for residential development across the Borough but specifically in Bovingdon to ensure Bovingdon continues to contribute to the overall housing stock in the same proportions as it has to date. Other than the provision of a new school (whose funding and timescale is unknown), there are no new community facilities proposed for Bovingdon in the current draft Local Plan. The two proposed allocations conflict with the vision for Bovingdon that is set out within the draft Local Plan.

As concluded by the Council's own assessment, the Site performs well on a number of identified criteria. Whilst the Council seems to be of the view that other sites are less constrained and perform better against the Sustainability Appraisal assessment, Thakeham has demonstrated in these representations that the two proposed Bovingdon allocations do not provide as many benefits as the Site, which considerably out-performs the two proposed site allocations.

Land at Fox Meadow, Bovingdon is available, suitable and achievable and able to deliver housing within the first five years of the plan being adopted. As demonstrated in the appended Vision Document, the Site can deliver a new high-quality sustainable development, with both new homes and community benefits. Thakeham is an environmentally focused developer that is committed to delivering high quality, sustainable developments.

Including the Land at Fox Meadow as an allocation within the emerging Local Plan would enable the Council to plan positively to help meet the housing needs of the Borough by delivering sustainable development with significant community benefits which will meet the Councils' Vision and spatial strategy aspirations.

We trust that these representations are clear, and we would be grateful for confirmation of receipt of our submission. In the meantime, please do not hesitate to contact me if you have any queries or require any further information.
